As far as proving the elbow is a direct, indirect or hypersensitive result from the chainsaw, I don't think anyone can prove or disprove this let alone bet their medical license on this. All I can say to this is that it never bothered me before the incident and I didn't have any of the numbness or tingling prior to the incident. It is possible that the compression existed before the incident and that the trauma to the arm aggravated the nerve causing a hyper sensitivity resulting in the sensations or lack of them. I don't know how or when the compression in the elbow happened. I believe it happened during the incident but cannot prove it. I was in panic mode followed by extreme shock following the chainsaw being lifted into my arm. All I do know is it didn't bother me at all prior to the chainsaw incident or I would have seen a Dr. about it.

On another note, Dr. Sagermans comment about sitting in front of a computer all day shows he has no idea how repetitious keyboarding is or how much work a graphic designer does. I'm curious as to the context of the question he was asked to reply this way and why he doesn't see typing as an extremely repetitious task requiring good dexterity. Every time I try to go at the keyboard, mouse or even write I don't get very far without suffering a spasm in the damaged muscles. It affects much more than just typing. My grip is shot as well and I have a lot of trouble doing regular daily activities like cooking, cleaning, driving, etc... Those spasms happen anytime I try to use those muscles for more than a few minutes repetitiously. Sit at your keyboard and type with your right hand and feel the muscles in your forearm at the same place the chainsaw entered, dug deep and tore out a huge chunk of my arm and ask yourself if issues in those muscles would affect your ability to type or use your fingers for anything. This is a no brainer, of coarse they do. I don't believe dr Sagerman gave this much thought or may have been asked this question in a context that would put computer keyboarding as a physically non stressful job overall but did not consider the extreme repetition, dexterity or fine motor control it takes to be a professional keyboardist 40-70 hours a week. If all I did was sit in front of a computer all day his statement would be true but to do my job requires one hell of a lot of keyboarding. Wish I could get paid to just sit in front of a computer and not have to type anything. Lol.

On another note, I did not see anything about the self dissolving stitches the Hospital used the day of the incident that never dissolved and Dr. Sagerman had to remove later. He said that accounted for the feeling of needles poking me in my arm and I believe he was right as those feelings stopped after he removed them. That was over a year of feeling those stitches aggravate the forearm and was a huge relief when they were found and removed. Removing those helped to pinpoint the Dystonia.

As far as the disability claim. This incident is what triggered me to file for disability but is only the piece of straw that broke the camels back so to speak and not the sole reason I filed. Disability looks at the whole body and not just this incident. In no way do I suggest the chainsaw is the sole reason I may or may not get disability. It is a cumulation of serious injuries I have suffered that will be the determining factor.

That's all I have for now but I'm sure more will come to mind as time goes on.

Oh, one more thing... You said a trial is like a theatrical production. If we had to go to trial how much approximately would you need in cash to make an overwhelmingly convincing production happen. Let me know so I have an idea of the ballpark figure and can

secure the funds needed.

Hans, I'm asking that when you consider either a settlement or a trial that you ask yourself what it would be worth to you if you had to suffered this type of injury that profoundly changed your day to day living and career.

Thanks again,
Paul

Hans,

Below is a link to an article talking about the integration of digital cameras at the centegra facilities.

A friend of mine who works at NIMC for well over a decade just replied to me and she says everything is recorded and available exactly for the purposes we discussed.

Hi Hans,

Just spoke with John Choyinski a lifelong friend of myself and David Gagnon.

First off I should mention that John has suffered a brain injury in his youth and did spend a few months in a coma and rehab but that was over 20 years ago and he's improved dramatically since. If you should talk with him you will notice something's off about him and I thought the heads up would help. One important note and you have to take my word for this till you talk to him and realize it for yourself, it is that John is damn near incapable of lying. Ask him anything and he's so darn honest he gets himself in trouble and doesn't know it. He often says way too much and I'm sure that can't be good except its what makes him so darn believable.

John is willing to talk about certain aspects of what David has said to him in confidence. John is extremely hesitant to go against David in fear of retribution and rejection from his lifelong friend and is on guard in his reactions and words but this can easily be avoided by asking him questions that skirt around the issue rather than directly at it until he already answered it.

John explained to me tonight that Dave is not the same person I knew a decade ago. These days Dave is all about himself and he has become money hungry. John told me I would have known that if I hadn't been off working all those years and been around more often. John went on to say that he knows that David is lying about how it happened because David seems to think he will have to pay more for insurance and he's so cheap he'd rather screw Paul over than paying 1 penny more or have to admit he did something wrong for no money. John went on to say that David was upset at having to do his Moms tree, didn't want to be there because he wasn't getting money for it and that he was trying to go too fast, didn't tell Paul what he was doing and that's how it happened. At this point Johnny showed confusion and said "um well I mean Paul moved his arm.... Ohhh whatever, I don't want to talk about it any more."

Hans, Johnny is David's longest lasting friend. These two were the closest of buddies growing up. Johnny said he would be willing to talk with you not to go against David but because he knows the troubles I have doing normal things that I used to be able to do very well.
If you start by asking Johnny about my grip or things I have trouble with like hand shakes or opening jars, writing or typing he will go on and on, he needs to be guided a bit in the right direction and soon you will have what you should need about his conversations with David.
But be forewarned, Johnny can go off on tangents and most of what you hear won't have anything to do with what he is there for and I'm more than positive he will say things that will ruin his own credibility.

When I asked johnny if it was ok for you to speak with him he said yes but to give you his home number and not his cell because he doesn't answer calls if he doesn't know the number. He also went on to say his parents told him to stay out of the issue between Dave and I because of David. They fear David may do something drastic if he feels Johnny went against him.

Best time to call him at home is either early morning before 9 am or at 6 pm but he is in and out all day.

John Choyinski Jr.
Home. (815) 385-8483

Hans, John has issues and may not make the best witness in my opinion but he is Dave's lifelong friend and if handled correctly can't lie or should I say can't keep one up for very long.

Paul

Hans,
I don't believe that any reasonable person sitting in a jury is going to give dr talerico's 5 minute evaluation much credit next to dr Sagerman's extensive examinations. I'd bet the farm on Dr. Sagerman over Talerico any day.
Next issue?

And in cases that have complicated medical issues, many times the jury will not be so accommodating and give you the benefit of the doubt. That's why Plaintiff's always have a more difficult time at trial, because they have the burden of proof. And, if the jury doesn't like the evidence they can find against you.

Ask dr Talerico that question.

This dr Talerico guy has no intimate knowledge of my injuries other than 2 very short visits that I walked out of feeling like I was waisting my time because there was no real examination.

I don't even agree with paying for his services.

As to damages, the issue is complicated. That is because your treating physicians do not all agree on exactly what injury you suffered or whether your had a fully recovery or not.

Dr. Talerico at MidAmerica Hand and Shoulder, saw you twice. The first time was in December, six months after your injury. He was not supportive of your claim in most respects. He didn't really feel there was anything wrong with you - as to the forearm. He said that you complained mostly of pain radiating down the forearm from the laceration site with numbness and tingling. Dr. Sagerman has also been deposed. I will summarize his testimony for your soon. His was more favorable, but still limited in what he related to the chain saw accident. Apparently he does not believe you presently have any symptoms relatable to the chain saw injury.

Think about these issues. I will provide you Dr. Sagerman's summary soon.

Morning Hans,
Wanted to touch base this morning because the call from you about something not being medically linked has been on my mind.
I'm not sure what was said during that deposition with the drs that prompted the call but I have been thinking about what it could be. Most likely it was the right elbow procedure.
During my deposition I remember being asked if the two were linked and I answered yes. Let me explain my answer to you. If the chainsaw had not gone through my arm then the procedure on my elbow wouldn't have happened. That procedure was exploratory to find what was bothering the arm from the chainsaw. On exam he noted no tenderness and it was mostly a normal presentation. Strength was good. He did not see any nerve problem. He prescribed physical therapy due to a muscular sort of symptomology - not nerve related. Apparently you did only 2 sessions of therapy and returned January, 2012. No new complaints at the time. The EMG was normal. He did not believe you were disabled. He continued you on therapy. He saw no evidence of nerve problems. The only symptoms were subjective - not represented by any abnormal exam finding.

I'm not sure what was said during that deposition with the drs that prompted the call but I have been thinking about what it could be. Most likely it was the right elbow procedure.
During my deposition I remember being asked if the two were linked and I answered yes. Let me explain my answer to you.
If the chainsaw had not gone through my arm then the procedure on my elbow wouldn't have happened. That procedure was exploratory to find what was bothering the arm from the chainsaw. Upon opening up the arm they did find some compressions which from my understanding was nothing unusual for a male of my age and very well may or may not have happened during my retreat from the chainsaw when I ended up half way across the yard on the ground. Incidental finding or not it still would not have been found if I hadn't had the chainsaw incident. So as I see it they are linked good or bad and cannot be separated. The exploratory procedure was to find and possibly fix issues relating to the chainsaw incident. They also removed a ton of scar tissue in the forearm on the same day during the same exploratory procedure that was a direct result of the chainsaw.
Hope this helps explain things better.
Let me know,
Thanks,
Paul

Hi Hans and Janet,

Today I met with Dr. Kathryn Kujawa at Alexian brothers hospital. She diagnosed my right arm as task specific Focal Dystonia and said it can be treated on a temporary basis with Botox injections every 3 months or so. My next appointment is for November 19th at 9:45 am to start the treatments. She said it is definitely caused from the trauma in my right arm. I have included her offices contact info below.
If you need anything else please let me know.
Thanks,
Paul

Hi Hans,
Received a call yesterday from your secretary concerning Mike Thomas. I'm not really sure what she was asking. Something about treating him as a hostile witness or something?
Give me a call.

Hans,

Mike Thomas just told me he doesn't want to be involved because he is afraid that it will be found out he paid me in cash rather than a 1099 or w2 and he doesn't want any trouble with the IRS.
I tried to tell him none of that matters but he is afraid and won't call you.

Here is his contact info if you want to try.

Just received your letter notifying me of the medical round of deps.
Thanks for the update.

On another note, I went in to see Dr. Levin earlier this week. She said I'm stuck with something called Dystonia in my right arm. Not sure exactly what that is yet but I do have to see dr Sagerman on the 26th and plan to ask about it.

Thanks again for keeping me updated.

Hi Janet,
I met with Dr. Sagerman (hand and arm surgeon) for a follow up on Monday for both my right and left arms. He scheduled another follow up in March and prescribed more physical therapy.

I mentioned a new issue I had to Dr. Sagerman, (hemroids) that I first noticed on Saturday and asked him where I should go. He sent me to Dr. Rosenova an internist. Dr. Rosenovas office had me come in the same day. Dr. Rosenova took one look and sent me to Dr. Daniel Conway a general surgeon to have it removed ASAP.

Dr. Conway took one look and surgically removed the hemroid right there on the spot. I have a follow up with Dr. Conway on February 13th.

I was told by the dr's that hemroids can happen at any age however it usually doesn't happen till after 50 years of age. One of the things that may cause it earlier that seemed to hit home with me as to the cause is stress. With everything I've been through stress makes the most sense to me. Hemroids hurt bad and it's going to take me a few days to recuperate. It hurts to walk, sit, stand, etc...

On another note, I missed my appointment at rosecrance earlier this month because I had a bad neck day and didn't get out of bed all day. I rescheduled with them and will be meeting with them again in February.

I have those forms from SSDI and am going to try and fill them out today and get them to you but i cant promise that i will get it done. The pain meds are simply kicking my butt. With everything that happened this week (hemroid issue) I don't know if I am over the 10 day demand they gave me but I am doing my best. I need to go lay down.

Thanks for everything,
Paul

Hi Hans,

I went to see Dr. Sagerman this morning for a follow up from the surgery on my right arm almost 6 months ago. He wants to see me again in 6 weeks for another follow up.

My Mom, Barb, went with me this morning to make sure I talked to him about my left arm. It has been hurting bad for 3 to 4 weeks now and she wanted me to get his advice. Dr. Sagerman had an X-ray done and said it looks good but I have what is called lateral epicondylitis or tennis elbow in my left elbow. He said it was probably just from over use due to me not using my right arm and could be treated. He said I need therapy for the left arm and prescribed 6 weeks of therapy 2 times a week and would follow up with it at the same time as my next appointment for my right arm.

I went to Fox Lake dynamic hand therapy with the prescription to schedule the appointments. They set the appointment for this Friday at 1:30 pm.

When I got home Dynamic Hand Therapy called. They said they cannot see me because this is not part of the litigation pending from my right arm unless the Dr. says it is. And because I have no insurance it would cost me $70.00 a visit.

Which there is no way I can afford. I have no income.

Any advice?

Thanks,
Paul

Hi Janet,

Just met with Dr. Sagerman. He suggested that I do physical therapy at home rather than go in to the clinic from this point forward. He set up an appointment to see me in 6 weeks on 12/3/2012.

I told him that I had applied for disability and he said he would fill out any paperwork needed but is still hopeful my arm will regain some strength over time. He also left me on full restrictions.

He had a suggestion for getting my neck looked at. He said to just walk into cook county hospital and have them perform the MRI then take it to a neurologist or Otho to have it read. I told him that Dr. Levin a neurologist offered assistance with my neck once my arm issue was taken care of. He said either way I should get assistance and under a Dr.'s care for it soon.

On another note, Dr. McMasters the psychiatrist suggested therapy and now that I'm not going to physical therapy every other day I'm going to go over and get assistance this week and see how it goes.

That's about it for now. Please let me know if you need anything and thanks for all your help,

Hi Janet,

I had to go in for more X-rays this past Saturday for SSDI's independent evaluation at physicians North in Lake Zurich. Two Saturdays ago they took several X-rays of my cervical spine and this past Saturday they took 2 X-rays of my lower lumbar spine. Not sure why they need the lower lumbar but I'll do whatever tests they need.
I did ask to get a copy of the reports for you and I was told I wasn't allowed to receive any from the dr's office but you could request them from SSDI on my behalf.

Thanks,
Paul

Hi Hans,

I looked into the MedChex question.

When I called Open Advanced MRI of Round Lake to get the amount owed I was referred to their corporate office. The corporate office had told me my balance was $0.00. They looked into who paid the bill and mailed me a breakdown of everything they charged, payments made and any adjustments. The corporate office at OPEN ADVANCED MRI did not know who MedChex was. They said it looked like an insurance payment was what paid my bill. Below is a breakdown of the billing from the corporate office at OPEN ADVANCED MRI.

Original charges from open advanced MRI of round lake.

$1510.00 for the MRI on 02/03/2012
$75.00 for the injection on 02/03/2012

$1585.00 total charges from open advanced MRI of round lake on 02/03/2012

MedChex paid

$800.00 for the MRI on 02/23/2012
$0.00 for the injection on 02/23/2012

An adjustment was made to the original charges from open advanced MRI in the amounts of

$710.00 for the MRI on 02/23/2012
$75.00 for the injection on 02/23/2012

My balance due reads $0.00

After a bit of searching the web I came across the contact info for MedChex, gave them a call and asked how they came to pay off my bill with OPEN ADVANCED MRI and what their terms were for paying off the bill.

MedChex claimed I owe them $3,390.00 for the MRI as of 08/22/2012

The customer Representitives supervisor I spoke with at medchex was named Tish.
Telephone number: (866) 959-1100
Extension: 109

Tish would not provide me with the terms or how MedChex came to negotiate and pay off my bill with OPEN ADVANCED MRI. She would simply repeat that they are a service to help those with no insurance and will be receiving a settlement for injuries. She told me that i did not need to worry about the increased amount from the original billing from OPEN ADVANCED MRI because a settlement would be paying for it. She demanded that I fax her a copy of the billing breakdown from Open Advanced MRI at 888-317-0260. She said that I was never supposed to see what the original billing was and that it is just wrong that I have it and that she would not discuss the terms or how MedChex became involved till I sent this copy to her office. That ended the conversation.

Hans, the only person/firm I ever authorized to handle any and all of my negotiations for medical billing is you and your firm. I will

bring in the breakdown from OPEN ADVANCED MRI to your office on Monday along with a few other bills I have collected.

Hi Hans,

Had another Dr's appointment with Dr. Sagerman at hand surgery associates. He read me the findings from the surgery. He said the chainsaw did not cut the ulnar nerve but the nerve was compressed in the ulnar groove at the elbow. Probably from scar tissue growing in the forearm and pulling the nerve tight in the ulnar groove. The scar tissue had apparently grown and attached my muscles to the skin and each other. Dr Sagerman said they managed to separate the muscles and skin.

I have another appointment with Dr.Sagerman in a month and am doing physical therapy.

I will send a few pictures of what the arm looks like 1 month after the surgery as soon as I can get someone to use the camera for me today.

Thanks,
Paul

The surgeon said today that he removed a bunch of scar tissue in my right forearm that bonded the muscles and skin as one. He said its all free to move separate now but the scar tissue will return. He said that getting in physical therapy quickly and with a lot of luck it should help to keep it all from bonding together again. He also had to release the ulnar nerve from compression at the elbow. It seems it bound up was under compression and formed a bit of scarring on the nerve. He did not perform the ulnar nerve

transposition because he said it seemed like it would be stable enough still in the ulnar grove.

Hope that was a good explanation of what happened. I'm not all with it just yet. I should be feeling better in a few days.

Hi Hans,

I couldn't help but to laugh at that. The reason I left Dr. Talerico and went to Dr. Sagerman was because he couldn't listen worth a darn and went on a 20 minute rant about prescribing pain medication to me when I never received any prescriptions from him nor did I ever ask him for any pain medication or any other prescription for that matter. Each time I went there it was as if he confused me with someone else. On my last visit with him he couldn't even remember why I was even there and went on another rant about insurance companies. He never even asked or looked at the X-rays from the hospital and I had to ask him numerous times just to get him to read the physical therapy reports. Honestly, he scarred the heck out of me and we were at odds, so I went to see someone else whom I had more confidence in (Dr. Sagerman). I'm sure Dr. Talerico is a good Dr., just one that I felt was probably over worked, was getting confused between his patients and couldn't give me the attention I needed. In retrospect, it fits that his notes are messed up and confirms my feeling about him and why I went to another Dr.

I just called the libertyville office for MidAmerica Hand and Shoulder Clinic. Talked with Gabby. She told me she could not change the record but would make an addendum to the record to clarify that I was not the one operating the chainsaw. She apologized for the confusion and said that it was lost between the Dr.'s notes and the person who transcribes the records. She is going to call your office and fax over the addendum.

Please let me know if you get the addendum and if it is ok

Thanks,
Paul

Hi Hans,

Wednesday I met with Dr. Sagerman and I signed the papers for surgery on my right arm. They are going to do an ulnar nerve decompression and transposition, and a neurolysis in the forearm. They are also going to explore and repair any other damage they find with the muscles, tendons and remove scar tissue. I am waiting on a call to find out when and where the surgery will be. They said it should be in the next 4 weeks.

I also need to get some sort of medical release signed by my primary care physician for the surgery so I met with Dr. Sek yesterday and he gave me a checkup and signed the forms.

On another note, when we last met you asked if any of the Dr.'s had been paid yet. I answered no but that wasn't true. I have paid Dr. Sek in full for each visit and Dr. Levin has been partially paid. I also had to just sign a form for Dr. Sangerman allowing them to charge my credit card $40 a month till my bill was paid in full. I asked if they would do the surgery on a lean against a settlement and gave them your name and number to contact you. They said they would but still required I give them permission to charge my credit card.

If you need anything else please let me know.

Thanks for everything,
Paul

Hi Hans,

Just set up an appointment with Sheila for 10:00 AM tomorrow to meet with you.

Just after I set up that appointment with your office my physical therapist called and discharged me until I see the Dr. Said my evaluation was bad and they sent the report to Dr.Sangermans office and for me to call them. After calling the Dr.'s office they bumped up my appointment to Wednesday of this week to discuss surgery.

See you in the morning,

Hi Hans,

I'm curious if David Gagnons home owners insurance policy number checked out?

Also, from what I understand this surgery that has been suggested by two different arm specialists, the neurologist and my primary physician is going to run in the neighborhood of $60,000.00. I want to be sure that it will be covered under the settlement before I decide to do it.
It is a direct result from the chainsaw cut and not anything else. Will it be covered or am I on my own to pay for it?

I am extremely nervous about the cost and getting stuck in bankruptcy and losing my house if it isn't covered.

Thanks,
Paul

Subject: SSDI medical update

Hi Hans and Janet,

I just got back from an appointment with Dr. Sam Biafora, another hand, wrist, elbow & shoulder specialist at hand surgery associates. He did what seemed to be a very thorough evaluation. He dug around pretty deep in my arm and did many different tests on my hand, arm and elbow. He recommended doing surgery to get the scar tissue out of the affected nerve and surrounding area. He said not to have any hope of restoring strength, feeling or reversing the paralyzed muscle that pulls my pinky finger in. But he said that going in and removing the scar tissue from the area will bring relief to the nerve and should stop the pains I get. He said that it will leave a long scar from the back of my elbow to the wrist and they will need to move the ulnar nerve to the inside of the elbow and that it will take approximately 3 months to recuperate. I mentioned the new medication I just started taking that was supposed to help fix the signals from the nerve. He said that all that will do is mask the symptoms for a while and that the only way to actually fix it is to go in and remove the scar tissue and see if any of the cut fibers can be grafted back together. He said that grafting the fibers probably won't work since its been almost a year since they were cut but removing the scar tissue should release the pain and should make a huge difference. He was ready to set up the surgery and I told him I needed a some time to talk with my mom and think about it. He set up another appointment for a month from now so I have time to think it over and said to call Dr. Sagerman if I should decide sooner.

Hi Hans and Janet,

Forgive me for combining this e-mail to both of you but both of you need the same information.

Met with Dr. Levin today at Associated Neurology. She prescribed Neurontin / Gabapentin 300 MG. I am supposed to take it in the evening for 1 week then move to 2 times daily. Then call her in 2 weeks to see how it's going. She said that it is supposed to help correct the signals from the misfiring nerve in my right arm which is causing the pain when I use my hand. And that the dosage may change depending on how and if it's working. This treatment was suggested by Dr. Sagerman to help try and avoid surgery. If it works I think this is a long term treatment because the prescription lasts for a year and the pharmacist said it goes hand in hand with the other medications I'm taking for long term pain management treatment.

I see Dr. Sagerman and his partner tomorrow for an evaluation at Hand Surgery Associates in Vernon Hills. I will let you know what happens.

Thanks to both of you,
Paul

Hi Hans,

Dr. Sagerman said he would call Dr. Levin the neurologist to get a prescription from her for me. She wants a new appointment with me. It is set up for Wednesday.

Also Dr Sagerman said to keep at physical therapy.

Will let you know what happens after Thursday's appointment.

Thanks again for everything,
Paul

Yes, this is the correct application form. You could go ahead and complete the application yourself and send it in now. Margaret should be sending you some information soon on your claim. We have a process that we have to complete to open new files and we are still working on yours. Once you receive anything, please give me a call if you have any questions or concerns.

Thank you.

I have e-mailed you twice requesting the forms/applications needed to get this medical help. You have not yet responded. I did try to do a search for these forms and came up with the PDF attached to this e-mail. Is this the correct form? Not sure if you want me to contact NU myself or if you are the one that should be handling this for me. Dr. Sek wants to get another look at my neck because he thinks disc bulging may have increased and that there is further degeneration. There is no way I can afford to get this procedure done and you said you would assist me in getting some sort of medical assistance.

Hi Meredith,
Today I received a letter for authorization to disclose information to SSA.
The letter was addressed to your office.
Should I sign and return the letter or have you already taken care of this?
Thanks,

Your case is in prehearing review as of 10/28/16. I don't think it will be much longer but we have to wait for the judge's scheduler to call us. It all depends on the judge's schedule and order of cases to be scheduled. They schedule the older cases first.
We will notify you as soon as we get a date.

Answering further, Defendants Bill McGuire and Carolyn McGuire were not present at the time of the occurrence but knew that David Gagnon and Paul Dulberg were present on the date of the occurrence. From conversations with David Gagnon, the answering Defendants believe that Mr. Gagnon and Mr. Dulberg had been cutting logs and tree branches into smaller sections without incident. While in the process of cutting tree branches Paul Dulberg unexpectedly and without warning moved his right arm directly in the path of the running chain saw. Investigation continues.

10. With respect to the chain saw that was being operated on the premises at the time of the alleged injury, state as follows:

a. Who was operating the chain saw at the time of the Plaintiff's alleged injury;

b. Who owned the chain saw at the time of Plaintiff's alleged injury;

c. who requested that the chain saw be used to perform work at the time of Plaintiff's injury.

ANSWER:

a. On information and belief, David Gagnon was operating the chain saw at the time Mr. Dulberg was injured.

b. Bill McGuire was the owner of the chain saw on the date of the occurrence.

c. Who, if any, (names and addresses) trained David Gagnon in use or operation of a chain saw prior to the occurrence.

ANSWER:

a. Objection. This interrogatory is better directed to David Gagnon. Answering subject to objection, and to the best of the answering parties' knowledge, David Gagnon has used chain saws in the past but the answering parties do not known how often he has used chain saws in the past.

b. Objection. This interrogatory is better directed to David Gagnon. Answering subject to objection, the answering parties do not know whether David Gagnon has been formally trained the use or operation of a chain saw. Answering further, the answering parties are aware that Mr. Gagnon has used chain saws many times in the past and he appears/appeared to know what he is doing.

12. What was the scope of work or task David Gagnon was engaged in with use of the chain saw at or about the time of the alleged accident.

ANSWER:

To the extent "scope of work" or "engaged" constitute legal conclusions, the answering Defendants object to Interrogatory No. 12. Answering subject to objection, at the time of the alleged occurrence, the answering Defendants were in the process of replacing an old shed on their property. Paul Dulberg helped David Gagnon tear down the old shed. The answering Defendants further believe that Mr. Dulberg took the components of the old shed to his property for eventual reassembly. On the date of the occurrence, Mr. Dulberg was helping David Gagnon take down several trees to make room for a new shed. On information and belief, prior to the occurrence Mr. Gagnon and Mr. Dulberg had been cutting logs and tree branches into smaller sections without incident. While in the process of cutting tree branches Paul Dulberg unexpectedly and without warning moved his right arm directly in the path of the running chain saw. Answering further, the answering Defendants did not engage, hire or pay either individual for their activities on site. Nor did either answering Defendant dictate, control or otherwise supervise the methods and means by which Mr. Gagnon and Mr. Dulberg performed the tree and branch cutting at issue.

13. Who (names and addresses) requested or chose to engage Gagnon in the "task" of use and operation of the chain saw at or about the time of the alleged accident.

ANSWER:

To the extent the words "chose" and "engage" constitute legal conclusions, the answering Defendants object to Interrogatory No. 13. Answering subject to objection, David Gagnon undertook the tree cutting and trimming in question as a favor to his parents. He was not engaged, hired or paid for the activities in question.

14. What instructions or guidance, if any, was given to Gagnon prior to Plaintiff's alleged injury/accident with regard to how he was to perform the chain saw work at the premises.

RE: Paul Dulberg

Dear Mr. Mast,

Mr. Dulberg was previously seen by my associate, Dr. Mitchell Grobman, in 2002 for left ulnar neuropathy, and had surgery and essentially became asymptomatic by 2007 and who had never had difficulty in his right arm. Approximately a month prior to the evaluation, he had been holding a branch for a neighbor when the chainsaw came up and cut his right forearm. He was taken to Northern Illinois Medical Center where they put in inner stitches in the muscle and outer stitches. He originally had very significant pain, but as the pain was getting better, he started noticing that he had numbness in his fifth digit in the inner aspect of his forearm. He had not been dropping things. It was mostly just a tingling and a numb feeling. He denies ever having any right-sided symptoms or right-sided injuries. His examination was significant for a healing scar in the right forearm and for decreased light touch, pinprick, and temperature sensation in the ulnar distribution of the right arm. His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Dulberg should followup if any additional symptoms develop or if he wished to try any neuropathic pain treatment if it became painful and not just numb.

Sincerely,

His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Dulberg should followup if any additional symptoms develop or if he wished to try any neuropathic pain treatment if it became painful and not just numb.

RE: Paul Dulberg

Dear Mr. Mast,

Mr. Dulberg was previously seen by my associate, Dr. Mitchell Grobman, in 2002 for left ulnar neuropathy, and had surgery and essentially became asymptomatic by 2007 and who had never had difficulty in his right arm. Approximately a month prior to the evaluation, he had been holding a branch for a neighbor when the chainsaw came up and cut his right forearm. He was taken to Northern Illinois Medical Center where they put in inner stitches in the muscle and outer stitches. He originally had very significant pain, but as the pain was getting better, he started noticing that he had numbness in his fifth digit in the inner aspect of his forearm. He had not been dropping things. It was mostly just a tingling and a numb feeling. He denies ever having any right-sided symptoms or right-sided injuries. His examination was significant for a healing scar in the right forearm and for decreased light touch, pinprick, and temperature sensation in the ulnar distribution of the right arm. His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Hans Mast

RE: Paul Dulberg

Dear Mr. Mast,

Mr. Dulberg was previously seen by my associate, Dr. Mitchell Grobman, in 2002 for left ulnar neuropathy, and had surgery and essentially became asymptomatic by 2007 and who had never had difficulty in his right arm. Approximately a month prior to the evaluation, he had been holding a branch for a neighbor when the chainsaw came up and cut his right forearm. He was taken to Northern Illinois Medical Center where they put in inner stitches in the muscle and outer stitches. He originally had very significant pain, but as the pain was getting better, he started noticing that he had numbness in his fifth digit in the inner aspect of his forearm. He had not been dropping things. It was mostly just a tingling and a numb feeling. He denies ever having any right-sided symptoms or right-sided injuries. His examination was significant for a healing scar in the right forearm and for decreased light touch, pinprick, and temperature sensation in the ulnar distribution of the right arm. His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Dulberg should followup if any additional symptoms develop or if he wished to try any neuropathic pain treatment if it became painful and not just numb.

Sincerely,

Karen Levin, MD (mdm)

TECHNIQUE: Multiplanar T1 and T2-weighted spin-echo pulse sequences and STIR sequence. Post-infusion multiplanar T1-weighted sequences were performed. A skin marker was taped to the point of maximal symptoms.

Contrast: 15 cc of gadolinium was infused.

FINDINGS: There is no bone abnormality seen. The bone marrow signal characteristics are normal.

There is no cystic or solid mass appreciated. The visualized muscles have normal signal characteristics.

There is no abnormal soft tissue infiltration or induration. Specifically, in the area of the skin marker which is marking the point of maximal symptoms, there is no soft tissue abnormality appreciated.

There is no abnormality identified along the course of the ulnar nerve in the forearm.

IMPRESSION: There is no forearm abnormality appreciated. This does not exclude the possibility of an ulnar nerve impingement or injury but there is no gross mass or abnormal infiltration along the expected course of the ulnar nerve. No obvious tendon or muscle abnormality appreciated at this time.

July 28, 2011

Mr. Hans Mast
3416 W. Elm Street
McHenry, IL 60050

RE: Paul Dulberg

Dear Mr. Mast,

Mr. Dulberg was previously seen by my associate, Dr. Mitchell Grobman, in 2002 for left ulnar neuropathy, and had surgery and essentially became asymptomatic by 2007 and who had never had difficulty in his right arm. Approximately a month prior to the evaluation, he had been holding a branch for a neighbor when the chainsaw came up and cut his right forearm. He was taken to Northern Illinois Medical Center where they put in inner stitches in the muscle and outer stitches. He originally had very significant pain, but as the pain was getting better, he started noticing that he had numbness in his fifth digit in the inner aspect of his forearm. He had not been dropping things. It was mostly just a tingling and a numb feeling. He denies ever having any right-sided symptoms or right-sided injuries. His examination was significant for a healing scar in the right forearm and for decreased light touch, pinprick, and temperature sensation in the ulnar distribution of the right arm. His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Dulberg should followup if any additional symptoms develop or if he wished to try any neuropathic pain treatment if it became painful and not just numb.

Sincerely,

Karen Levin, MD (mdm)

Thanks for the call Brad. I wish you luck on this one. I recall that we have a case from a former client of yours Mr. Frank Cavanaugh. His case is a bit complicated as well. Do you want to just have a mutual agreement that our fee will be waived for Dolberg and your fee will be waived for Cavanaugh. Please advise.

As to our costs, it is understood that our costs will be fully reimbursed at the time of any settlement or recovery but that at this point prior to settlement you will pay us approx 50% of our costs which equals $1,500 (I will confirm the exact number shortly)

Please confirm.

PROPERTY DAMAGE--WELDING ALLEGEDLY SPARKS NEW YEAR'S EVE WAREHOUSE FIRE

(GGG 28/4) *Higgins Brothers Inc., Illinois Emcasco Insurance Co. as subrogee of Higgins Brothers Inc. v Associated Services Inc.* 12L-12341 Tried Mar. 4-10, 2015 (16P)

Verdict: Not Guilty

Judge: Thomas V. Lyons, II (IL Cook-Law)

Pltf Attys: Steven R. Johnson and Matthew T. Andris of *Langhenry, Gillen* (Wheaton) for both pltfs Demand: $1,000,000 Asked: $1,076,270

Deft Attys: Daniel G. Suber and Thomas J. Olson of *Daniel G. Suber & Associates* (Grange Mutual Ins.) Offer: $50,000

Pltf Expert: Joseph Mazzone (Fire Cause/Origin) for both pltfs

Deft Expert: David DeVries (Fire Protection)

On December 31, 2011, a fire broke out at the Higgins Brothers warehouse located at 1428 W. 37th St. in Chicago's Back of the Yards neighborhood. The Chicago Fire Department's Office of Fire Prevention investigated the cause of the fire, and determined that the point of origin was on the first floor of the warehouse where an MIG welder had been used the day before to fabricate a new filter wall for a paint spray booth operated at the warehouse facility. The welding was performed by David Suarez, the owner of deft Associated Services. Higgins Brothers and its insurer, Illinois Emcasco, sued deft to recover the cost of property damage repairs and associated expenses. Illinois Emcasco sought $662,572 paid out for damage to the building, $300,000 for business personal property, and $90,000 extra expenses, for a total of $1,052,572. Higgins sought $1,000 for its deductible on building damage, $21,465 for loss of business personal property, and $1,233 extra expenses, for a total of $23,698. The defense argued that even if a spark from the welding arc was the ignition source of the fire, the fire's actual cause and fuel source was paint overspray which had accumulated up to five inches in the rear plenum of the paint spray booth. The defense denied negligence, contended Higgins Brothers was at fault for not having sufficient clearance between the booth's chimney and the combustible wooden second floor above, and further maintained that Higgins was negligent in not having an operable sprinkler system over the paint spray booth.

TRAFFIC--CAR OWNER SUED FOR NEGLIGENT ENTRUSTMENT TO UNLICENSED DRIVER

(GGG 28/5) *Ramon Weatherspoon v Pablo Velazquez, Jose Gonzalez* 12L-13709 Tried Feb. 11-17, 2015 (1B)

Verdict: Not Guilty v both defts.

Judge: James M. McGing (IL Cook-Law)

Pltf Attys: Daniel M. Breen and Christopher J. Goril of *Breen Goril Law* Demand: $20,000

Deft Atty: Clifford M. Panek of *Parrillo, Weiss* for both defts (American Access) Offer: none

Pltf Medl: Dr. Alan Olefsky (Emergency Medicine)

December 9, 2011, pltf driving westbound on Lake St. in Chicago contended deft Velazquez struck his vehicle near Kilbourn Ave. while trying to pass him on his left side and crossing over into oncoming traffic, forcing pltf into a pole. Pltf M-48 claimed neck, back and shoulder soft tissue injuries ($12,339 medical expenses, $1,900 property damage). Pltf further brought a negligent entrustment claim against deft car owner Gonzalez because Velazquez did not have a driver's license. Deft M-30 landscaper Velazquez denied he changed lanes and maintained pltf hit him while coming from his right side. The defense denied pltf was injured. The jury reportedly deliberated only 20 minutes.

Re: Paul R. Dulberg
Bankruptcy Case No. 14 83578

Dear Attorney Balke:

Following up on matters we recently discussed, the Bankruptcy Estate seeks to employ you to assist the Estate in pursuing Mr. Dulberg's pending personal injury claim.

It is my understanding that you do not have a conflict of interest, and that you can represent the Bankruptcy Estate. As a caution, I enclose a copy of Debtor's list of creditors (Schedules D through F). In light of this information, if you do not have a conflict, I would be most appreciative if you would review the enclosed Affidavit of Disinterest for accuracy and completeness.

Also, please know if you are able to settle the pending personal injury claim, before any settlement can be finalized, I will need to file with the Bankruptcy Court a motion approving the Debtor's settlement, along with approval of the payment of your attorney fees and costs, and the fees to be paid to any third party. In that motion and order, we can ask that your firm's fees and costs and any third party fees paid out of the gross proceeds, with the net proceeds tendered to the Estate.

Very truly yours,

EHRMANN GEHLBACH BADGER LEE & CONSIDINE, LLC

McHENRY COUNTY, ILLINOIS

PAUL DULBERG, Plaintiff, vs. DAVID GAGNON, Individually, and as Agent of CAROLINE McGUIRE and BILL McGUIRE and CAROLINE McGUIRE and BILL McGUIRE, Individually, Defendants.	)	No. 12 LA 178

PLAINTIFF'S PRE-TRIAL SETTLEMENT MEMORANDUM

Statement of the Case

On June 28, 2011, the Plaintiff, Paul Dulberg, was assisting friend/Defendant David Gagnon, with cutting down an evergreen tree at the home of Gagnon's parents, 1016 W. Elder Avenue, in McHenry, and as Dulberg held down onto a limb, Gagnon swiped his right forearm with the chain saw causing a deep laceration, resulting in a nerve injury.

Dulberg testified that the accident occurred when the defendant walked toward him while cutting a branch he was holding. The limb was large and part of it was resting on the ground. The defendant walked toward Dulberg with the chainsaw pointing down at a 45 degree angle. The chain was not moving. Then Paul heard the chain saw RPM's ramp up. This alerted Dulberg and he dropped the branch. Paul released the limb before the chain saw came in contact with it. The defendant came up with the saw at a 45 degree pointing up and cut Dulberg. The Defendant never made contact with the branch. David had ***one hand*** on the arm and the other on the trigger of the chainsaw. His arm and his two fingers are painful all the way through to the elbow, including the pinky, ring finger and thumb. There is a fiery burning sensation, tingling. The cold also bothers his arm. Sometimes when he is resting his arm he has pain and tingling and burning in the arm. Grabbing things and moving his arm does cause pain. Dr. Sagerman did surgery in July, 2012 to remove the scar tissue. Paul is still receiving physical therapy for his left arm. His right arm is doing better. All of Paul's fingers are affected when he grasps things. He experiences burning pain in his right arm where the scar tissue was. He was given anti-inflammatories from his doctor. He stated he tries not to use them. On his right arm, he is unable to bend his pinky all the way in. Dr. Sagerman told him that nerve damage takes a long time to heal.

Gagnon testified that Dulberg was holding the branch with his left arm and reaching to hold the branch with his right arm when Dulberg's arm was struck by the chainsaw. He admits Dulberg was reaching for the branch so that he could hold on to the lower end of the branch and keep it steady while Gagnon was cutting the limbs from the branch (suggesting Gagnon was operating the chain saw knowing Dulberg was 'repositioning" his arm - contrary to the instructions of the manual) Gagnon acknowledged in his deposition to giving a recorded statement to Plaintiff's counsel in which he described the accident as follows:

> ...we got to a branch that maybe we shouldn't have tried to cut, it was a little flimsy, so when I hit the crotch it flexed.."

See Xerox photos of chain saw, diagram of "tree," and Plaintiff's injury - attached as Group Exhibit "1."

The chain saw was owned by Gagnon's father, Bill McGuire. Gagnon had used the chainsaw the day before on his own, while trimming the trees. The chainsaw manual provides, in part, as follows:

> **Chainsaw Manual:**
>
> **Basic Safety Precautions:**
>
> Read this manual carefully until you completely understand and can follow all safety rules, precautions, and operating instructions before attempting to use the unit.
>
> Keep children, bystanders, and animals a minimum of 35 feet (10 meters) away from the work area. **Do not allow other people or animals to be near the chain saw when starting or operating the chain saw.** (Fig. 2)
>
> Only loan your saw to expert users who are completely familiar with saw operation and correct use. Give other users the manual with operating instructions, which they have to read before using the saw.
>
> Keep all parts of your body away from the saw chain when the engine is running.
>
> **Apply the chain brake prior to any repositioning of the operator in the cutting area.**
>
> Do not operate the chain saw with one hand! Serious injury to the operator, helpers, bystanders, or any combination of these persons may result from one-handed operation. A chain saw is intended for two-handed use.
>
> Always begin cutting with the engine at full speed and the saw housing against the wood.

Medical

Dr. Karen Levin, at Associated Neurology, saw Dulberg on 7/28/11 (1 month after accident) and in her report (attached as Exhibit "2") states . . . that Dulberg had no prior history on the right arm, and that as a result of the accident Dulberg suffered a cut on the right forearm requiring stitching in the muscle and outer area. When the pain diminished, there was numbness and tingling noticed in the forearm and digits. She believed Dulberg was suffering from brach neuropathy to the sensory nerves. She referred him to a hand surgeon.

Dulberg saw Dr. Marcus Talerico (Mid America) for ongoing forearm pain. His visits were December 2, 2011 and January 6, 2012. Dr. Talerico did not feel there was any significant nerve involvement and referred Dulberg for therapy.

Dulberg next saw Dr. Scott Sagerman, who testified that he first saw Dulberg on 2/27/12 with a history of a large scar on the mid forearm with pain and symptoms including muscle pain and weakness in gripping and pulling things in his forearm are related to the accident. Dulberg suffered a deep laceration to his forearm and there was some injury to those muscles and nerves which may have been causing the pain in that area. He diagnosed Dulberg with a right forearm laceration with possible ulnar nerve issues and damage. The EMG/NCV was normal. He performed a surgery to the forearm on 7/9/12 to - in part - remove scarring (and for cubital tunnel release). (Sagerman records are attached as Exhibit "3")

Dulberg next saw Dr. Kathy Kujawa for post traumatic dystonia of the right hand, and she recommended Botox injections for spasms. She believed the involuntary spasms as well as the pain that Dulberg continued to suffer was due to the nerve damage and nerve issues directly to the chainsaw accident. She felt it would be permanent and Dulberg would need expensive medical treatment to have a decent quality of life.

Plaintiff's medical expenses are itemized in the attached Medical Expense Report in the amount of $58,387.33 (Attached as Exhibit "4")

Re: Your File: Paul Dulberg v. David Gagnon, et al
My File: Bankruptcy Estate of Paul Dulberg; Case No. 14-82297

Dear Attorney Mast:

Thank you for the information you sent on January 23rd. At this point in time, I am unable to determine if my bankruptcy case may be an asset case. (If it might be an asset case, my Estate needs to retain you to continue the pending pi case -- assuming you can be and want to be retained.)

I received from you a list of medical bills (which bills total over $58,000.) In addition, I just received from Debtor's counsel a copy of a letter from US Phy, by which this creditor claims a medical lien.

Can you please advise:

1) What is the total amount of medical liens filed against the pending pi case? (I received a copy of a document, listing medical bills totaling $58,387.33, but I don't know if any of these bills are unpaid and, if so, if the unpaid providers timely filed a medical lien).

2) As to the medical lien apparently claimed by US Phy (via its letter of January 8, 2015 - a copy of which is attached for your ready reference) is this letter the first lien claim it made against the personal injury cause of action? If so, based upon the little research I've done, to date, I don't think this letter is sufficient to claim a lien -- post-bankruptcy filing -- on Debtor's right to recover in his pi case. (It may be that I need to file

something in the bankruptcy case to cause this lien to be removed. Investigation continues.)

3) Once I know the above facts, I will need to know the potential range of recovery, and, assuming the potential recovery is large enough, if you want to be retained by the Bankruptcy Estate to continue to represent the Debtor/Estate in the pending personal injury cause of action.

I look forward to hearing from you again soon.

Very truly yours,

RE: ***Bankruptcy Estate of Paul Dulberg, Case No. 14-82297***

Dear Ms. Heeg:

I received your recent correspondence. I am currently representing Paul Dulberg for injuries he suffered when his arm was struck by a chainsaw on June 28, 2011. We are in the midst of discovery. There is no scheduled trial date. At this point, the defense is taking a "no liability" position and therefore, the chance of recovery is uncertain. I believe liability will be extremely difficult. We have calculated Paul's medical expense related to the occurrence as exceeding $60,000. To my knowledge, most of the medical expense is outstanding. However, my belief is that any eventual recovery will be much less.

I will be pursuing settlement negotiations. I am not sure at this time how this case will end up. Happy to speak with you at your convenience.

Very truly yours,

HANS A. MAST

Re: Your File: Paul Dulberg v. David Gagnon, et al
My File: Bankruptcy Estate of Paul Dulberg; Case No. 14-82297

Dear Attorney Popovich:

Paul R. Dulberg filed a Chapter 7 bankruptcy petition on November 26, 2014, and I was assigned as Trustee. (A copy of the Notice of bankruptcy filing is attached for your ready reference.) As Trustee, I am duty bound to collect the Bankruptcy Estate's assets for the benefit of the Debtor's unsecured creditors.

One of the assets of Mr. Dulberg's Bankruptcy Estate is his interest in the personal injury cause of action pending in McHenry County, Illinois. Please note the Bankruptcy Estate's interest in your records.

Debtor has provided to me a copy of the Complaint, but nothing more. At this time, can you please "pull out your crystal ball" and estimate for my Estate the possible result of the pending litigation, the possible timing of its resolution, the extent of any medical liens, and the likely finally distribution to debtor? Also, if the case has sufficient worth, it may be best if the Bankruptcy Estate retains you and your firm to continue the representation (for the benefit of the Bankruptcy Estate.)

I look forward to hearing from you soon.

Very truly yours,

EHRMANN GEHLBACH BADGER LEE & CONSIDINE, LLC

- Keep the wound clean and dry.
- After 2 days, wash the wound gently with warm water and soap. Pat it dry.

SMOKING CESSATION

Smoking is the nation's leading preventable cause of death. It significantly increases the risk of coronary heart disease, stroke and cancer. In fact, more than half of all smoking related deaths in America each year are from heart disease, stroke, or other cardiovascular diseases. The good news is, that one year after quitting, the risk of heart disease is cut in half. After five to fifteen smoke-free years, the risk is that of a person who never smoked!

If you or someone you love is interested in quitting, consider joining our "Freedom From Smoking "classes for adults. Centegra Health System and the McHenry County Department of Health have partnered together to bring you an effective program that will help you quit smoking. Call 877-CENTEGRA, (877-236-8347) for more information regarding this program. To speak with a counselor immediately, call the Illinois Tobacco line at 1-866-QUIT-YES.

PAIN MANAGEMENT AFTER DISCHARGE:

A person may feel less pain just by being in familiar surroundings. Here are some frequently asked questions about your pain management:
- What can I do to help my pain management? A person's level of relaxation and their environment can affect their pain. If you are tired, over stimulated (too many visitors) are anxious about your diagnosis, or a past experience with a hospitalization, your pain perception may be impacted and your tolerance decreased. Ask questions, and inform us about any problems or concerns that you may have, re: pain. Partner with your health team for your best pain management.
- What if the medication is not working? Tell your health-care provider; physician, home health nurse, etc. You may need a different dose or type of medicaton.
- What if I feel I'm not getting enough pain control? Talk to your physician or home health nurse about it. Together you may be able to develop a plan to prevent or ease your pain. Depending on the cause of your pain, your health-care provider may suggest exercise, use of heat/cold, massage, repositioning, immobilization of the affected part, or distraction such as music or rest.
- There are other methods of pain management. Let your health-care provider assist you in finding the best one for you.

Weight management is one step to help maintain a healthy lifestyle. For certain medical problems, such as congestive heart failure, weight should be monitored daily.

YOU ARE THE MOST IMPORTANT FACTOR IN YOUR RECOVERY.

Follow the above instructions carefully. Take your medicines as prescribed. Most important, see a doctor again as discussed.
If you have problems that we have not discussed, or your problem changes or gets worse, Call or visit your doctor right away. If you cannot reach your doctor, return to the Emergency Department immediately.

Centegra Health System is very concerned about your safety and well being. As part of our efforts to always provide very good care, any medications you received during this visit were reconciled with medication you are currently taking. This reconciliation was based on the information you or your representative provided regarding your current medications and allergies.

"I have received this information and my questions have been answered. I have discussed any challenges I see with this plan with the nurse or physician."

AUTHORIZATION FOR PERIPHERAL NERVE BLOCK PLACEMENT

A peripheral nerve block has been chosen by both your surgeon and anesthesiologist as a way to manage your pain after surgery. The following information outlines the type of block that has been indicated for your procedure. Your anesthesiologist, who is specially trained in performing this procedure, and is an independent practitioner and not an employee of Northwest Community Healthcare, will be placing the nerve block.

Though peripheral nerve blocks have a good safety record, all the listed blocks below have possible adverse effects of incomplete block, infection, bleeding, hematoma formation, adverse drug reaction, local anesthetic systemic toxicity, damage to nerve and/or surrounding structures. The duration of block may vary between patients and some motor and sensory deficits may last longer then expected.

Rt

___ Brachial Plexus block
This is performed to reduce post operative pain in the upper extremity. Possible specific adverse effects include but are not limited to dryness or numbness of the throat/facial region, hoarseness of the voice, redness of the eye, drooping of the eye lid, shortness of breath and rarely collapsed lung.

___ Femoral, Sciatic, Popliteal nerve block(s)
This is performed to reduce post operative pain in the lower extremity. This block(s) will reduce your sensation and muscle strength in your leg. You will be required to have a leg splint on at all times when standing or walking until full feeling and muscle strength has returned, otherwise a potential injury due to fall may occur.

___ Lumbar Plexus block
This is performed to reduce post operative pain in the hip and lower extremity. Possible specific adverse effects include but are not limited to hematoma of the retroperitoneal space, spread of local Anesthetic to epidural/subarachnoid space, hypotension, possible injury due to fall.

___ Transversus Abdominis Plane Block (TAP block)
This is performed to reduce post operative pain in the abdominal area. Possible adverse effects include inadvertent needle puncture of the peritoneal space or abdominal viscera, bowel hematoma.

Other regional nerve blocks: _____

_____

With your signature, you have acknowledged that you have been informed of risks and benefits as well as expected outcomes for the post operative nerve block chosen for you. You are also confirming that you have read and fully understand the content of this authorization.

I authorize NCH to request and receive information, including my medical record, from my treating physician(s) or agents.

I hereby authorize the NCH and any physician or other healthcare provider who may treat me to release, for the purpose of billing and collecting, any and all pertinent information contained in my medical records, including HIV, to one another and/or their billing agents, and third party payors responsible for payment of patient charges including but not limited to insurance companies, health benefit plans, employers involved in approval of benefit claims, government agencies or intermediaries representing any of the above.

PAYMENT GUARANTEE [P.D.] (please initial)
I hereby assume full responsibility for and agree to pay all costs, charges and expenses incurred by me for the medical care provided by NCH and/or my treating physicians, whether as an inpatient or outpatient, unless I qualify for financial assistance or charity care. Key Points to observe after hospital discharge:

1) Begin to take your oral pain medication when you start to have feeling in your operative limb. This will provide more effective pain relief than if you wait until the block wears off completely.

2) Start taking your home medications as directed by your family physician or surgeon.

3) You may notice a slight temperature difference between your "blocked" limb versus your other limbs. This is not unusual and is a normal occurrence for this type of anesthesia.

Upper Limb (Arm)

1) The nerve block will wear off in about 6 - 24 hours. Until then, your arm and shoulder area will be numb and weak. DO NOT lift or carry objects.

2) Limit your activities until full feeling and strength have returned to avoid injury due to altered sensation.

3) If given an arm sling, wear sling until you have feeling and muscle strength to control your arm or your surgeon tells you to remove it. This also is to prevent injury.

Lower Limb (Leg)

1) The nerve block will wear off in about 6 - 24 hours. Until then, your leg will be numb and weak. DO NOT try to bear weight on your leg or you might fall! When given a brace, wear it at all times that you are up and about, until your surgeon tells you otherwise.

2) Limit your activities until full feeling and muscle strength have returned to avoid injury due to altered sensation.

3) Use assistive devices such as crutches or a walker as ordered by your physician.

If you have redness or swelling at the injection site, metallic taste in your mouth, facial numbness or tingling, slurred speech, restlessness, or any question that is of concern please call the 847.618.7200 immediately and ask to talk to an anesthesiologist.

DSC OPERATIVE REPORT

DATE OF OPERATION: 07/09/2012

PREOPERATIVE DIAGNOSES:
1. Right cubital tunnel syndrome.
2. Right ulnar nerve injury at the forearm.

POSTOPERATIVE DIAGNOSES:
1. Right cubital tunnel syndrome.
2. Right ulnar nerve injury at the forearm.

PROCEDURES:
1. Right cubital tunnel release.
2. Right ulnar neurolysis at the forearm.

SURGEON: Scott Sagerman, MD.

ASSISTANT: Sam Biafora, MD.

ANESTHESIA: Regional block.

COMPLICATIONS: None.

TOURNIQUET TIME: 1 hour.

FINDINGS: The right cubital tunnel showed thickening of the cubital tunnel ligament with scarring of the ulnar nerve to the floor of the cubital tunnel and local constriction. The nerve also appeared constricted at the flexor pronator aponeurosis at the distal aspect of the cubital tunnel. Also, a thick arcade of Struthers was present proximal to the cubital tunnel, though the ulnar nerve was not visibly constricted at this level.

The right forearm, the site of the previous chainsaw laceration revealed extension to the subcutaneous tissue and fascia overlying the flexor carpi ulnaris muscle. A piece of retained absorbable suture material was present. The muscle fibers were in intact. The ulnar nerve was intact beneath the muscle belly. There was no visible scarring around the ulnar nerve at this level.

DESCRIPTION OF PROCEDURE: Informed consent was obtained from the patient. Prophylactic IV antibiotic was given. He received medical clearance from his primary care physician. Regional block anesthetic was administered by the

anesthesiologist in the right upper extremity. The right arm was prepped and draped sterilely. A sterile tourniquet was applied to the right upper arm, and it was elevated following exsanguination of the limb.

A longitudinal incision was made over the posteromedial aspect of the right elbow centered at the cubital tunnel. Under loupe magnification, the subcutaneous tissue was dissected. Superficial veins were ligated with bipolar cautery. A branch of the medial antebrachial cutaneous nerve was identified. This was gently retracted safely and protected. The fascia was incised proximal to the cubital tunnel, and the ulnar nerve was visualized. The cubital tunnel ligament was divided and completely released. The flexor pronator aponeurosis was also incised and released, and the nerve was dissected distally into the musculature where motor branches were identified. The release was then carried proximally, and the arcade of Struthers was divided and completely released. The ulnar nerve was inspected. The nerve was mobilized from adhesions with gentle blunt dissection. Nerve gliding was checked and found to be satisfactory. The ulnar nerve was stable at the cubital tunnel. The field was irrigated with antibiotic solution. The subcutaneous tissue was reapproximated with buried Vicryl sutures, and the skin edges were reapproximated with nylon sutures.

Attention was then directed to the forearm scar. A longitudinal incision was made over the ulnar aspect of the mid forearm centered at the site of the scar. Under loupe magnification, the subcutaneous tissue was dissected. The fascia was visualized. Superficial vein was ligated with bipolar cautery. The dermis was elevated off of the scarred fascia with blunt dissection. The retained suture material was removed. The muscle fibers were visualized and found to be in continuity. The ulnar nerve was exposed in the interval between the flexor digitorum and flexor carpi ulnaris muscle bellies. The nerve was dissected proximal and distal from the region of the laceration. The nerve was completely intact at this level with no visible scarring or adhesions. The field was irrigated with antibiotic solution. The subcutaneous tissue was reapproximated with buried Vicryl sutures, and the skin edges were reapproximated with nylon sutures.

A sterile bulky gauze dressing was applied. The tourniquet was deflated. Circulation returned to the right arm
with normal capillary refill distally. The patient was transported to recovery in stable condition. He tolerated the procedure well. There were no complications. An arm sling was applied for protection.

Litigation Agreement and Acknowledgement of Financial Responsibility

This Litigation Agreement and Acknowledgement of Financial Responsibility is executed as of _____, 200__, by _____ ("Patient") residing at _____.

WHEREAS, Patient has been prescribed physical therapy for injuries that have occurred in a recent event;

WHEREAS, Patient is pursuing litigation to recover damages for such injury (the "Claim");

WHEREAS, FACILITY ("Clinic") is willing, as a courtesy to Patient, to delay collection of its fee for the physical/occupational therapy services rendered in order to allow Patient time to recover monetary compensation to cover the cost of the therapy services.

NOW, THEREFORE, IT IS ACKNOWLEDGED AND AGREED THAT:

Clinic agrees to refrain from attempting to collect its fees for services rendered to the Patient which are the subject of the Claim for the period set forth herein, subject to compliance by Patient with Patient's agreements and obligations as set forth herein.

Patient acknowledges and agrees that it is their sole obligation to pay for the therapy services rendered for injuries arising from the event. Patient grants a lien on and/or assigns any settlement or judgment in which Patient receives from the Claim in an amount equal to the lesser of the charges for the therapy services rendered, or the maximum amount permitted by law. Patient further agrees to execute such further documents as necessary for Clinic to preserve its right to enforce said lien and/or assignment.

Patient agrees that if the Clinic does not receive a satisfactory payment within 365 days from the date on which the last therapy services were rendered related to the Claim, Patient will pay for the therapy services without the necessity of notice or further demand. Patient acknowledges and agrees that In the event Patient does not pay for the therapy services within 395 days from the last date that the therapy services were rendered arising from the Claim, the account will be transferred to our collection agency. Patient agrees to be responsible for any expenses incurred in collecting Patient's account, including all fees, court costs, reasonable attorney's fee, and all other collection related expenses.

By signing below Patient acknowledges that he/she has read, understands and hereby accepts the above obligations and agreements.

HEALTH CARE PROVIDER'S LIEN

Patient: _____

I have a cause of action as a result of injuries sustained by me on _____.

I desire your services as a treating therapy facility, even though I do not have the funds to personally pay for therapy services at this time.

I understand that I am directly and fully responsible to pay you for all the reasonable and necessary medical bills incurred by me for the rendering of reasonable and necessary services provided by you. This agreement is made in consideration of your continued treatment of me, awaiting payment and foregoing collection efforts.

I give a lien to you on any settlement or jury verdict that I receive as a result of my cause of action. I authorize and direct my attorney to pay directly to you such sum as may be due for services rendered to me, and to withhold such sum from my portion of any settlement or jury verdict. In the event my portion of the recovery is insufficient to cover all of the protected medical bills in my case, then I will promptly reimburse you from my portion of the recovery on an accepted basis with all of my other protected medical bills. I further understand, however, that such pro-rata payment will not be considered payment in full by me, and that I remain fully responsible to pay the balance of my medical bill, and that any personal liability is not contingent on the settlement or jury verdict which I may recover.

Patient's Signature: X Paul Dulberg Date: 12-6-04

As the patient's attorney, I acknowledge the above lien. Upon final settlement or jury verdict in this case, I agree to withhold your medical fees from the client's share of any settlement or jury verdict, and forward full payment to you.

It is expressly understood that in the event the attorney-client relationship is terminated prior to resolution of the above referenced client's case, I will immediately notify you, and I will continue to use my best efforts to ensure that your fees will be protected. I will immediately notify the appropriate insurance companies and any new attorney that the case cannot be concluded without paying your fees in accordance with this lien agreement.

LETTER OF PROTECTION
(SAMPLE)

Patient/Client:

Patient Account Number:

I hereby authorize FACILITY to furnish _____ Attorney at Law, with my complete medical records, including examination, treatment diagnosis and prognosis in regard to the accident in which I was involved. I understand that such authorization should be accompanied by an executed Authorization for Disclosure of Protected Health Information in the form attached hereto prior to FACILITY's release of such records.

I give irrevocable authorization to my attorney to pay directly to FACILITY all such sums due for therapy rendered to me as a result of the accident. I further grant a lien on and/or assign any settlement or judgment in which I receive from any claim(s) filed as a result of the accident in an amount equal to the lesser of the charges for the therapy services rendered, or the maximum amount permitted by law. I further agree to execute such further documents as necessary for FACILITY to preserve its right to enforce said lien and/or assignment.

I fully understand that I am directly and fully responsible to FACILITY for services rendered to me. This agreement is made solely for the purpose of affording FACILITY additional protection. I understand that payment of this obligation in full is not contingent on any settlement, judgment or verdict by which I may eventually recover such fees.

In addition, I understand and agree that payment in full on my account should be made within _____ months of this date unless other financial arrangements have been made. I understand that my account shall be forwarded to FACILITY's collection agency in the event I do not timely pay the account or make other financial arrangements. I further understand that the obligations recited herein (including the obligation to pay for services rendered) shall continue in full force and effect, and shall be binding upon me, my heirs, administrators, executors, successors, and assigns, until and unless all fees for services rendered have been paid in full.

CHART NOTES

The patient was in the office today for evaluation of left elbow. He is doing well. His arm is feeling much better. The strength in his hand has improved dramatically. He is very pleased with the results of his surgery. He does not report any paresthesias in his hand.

PHYSICAL EXAMINATION: The left elbow scar is stable. Range of motion is full. Sensation around the scar is decreased as expected. This should improve with time. Intrinsic strength is 5/5. Pulp-to-palm distance is 0. Sensation is intact in all distributions.

TREATMENT PLAN: He will continue home exercises as directed by the therapist. He may resume use of his left hand for activities as tolerated. He was cautioned to limit heavy lifting activities if any symptoms arise.

He did not wish to schedule a follow-up appointment. He was invited to return back to the office at his discretion if any further problems or concerns arise. Follow-up PRN. Work status is no restriction.

NEXT VISIT: PRN.

TREATMENT PLAN: I reviewed the operative findings. The patient's questions were answered. The need for activity restriction was explained.

He was given a therapy referral for fabrication of an elbow extension-block splint and instruction in protected range of motion exercises.

The sutures will be removed next week, and he will begin scar management after that. Follow up is three weeks. Work status is no use, wear splint.

NEXT VISIT: Three weeks.

CHART NOTES

The patient was in the office today for evaluation of left elbow. He is doing well. His symptoms have improved. His pain is decreased. Sensation has improved. He is participating in therapy. His progress is satisfactory.

PHYSICAL EXAMINATION: The left elbow scarring is stable. Range of motion is satisfactory. There is no nerve subluxation. He reports diminished sensation surrounding the surgical scar which is expected. Sensation is intact distally. Finger motion is satisfactory.

TREATMENT PLAN: He will continue postoperative therapy including scar management and gradual strengthening exercises. I reviewed the need for temporary activity restriction and protection of the left arm. He was given a padded elbow sleeve for protection of the surgical scar. The sensation surrounding the scar should improve gradually over time. Follow-up one month. Work status is no forceful, no heavy.

NEXT VISIT: One month.

CHART NOTES

The patient was in the office today for evaluation of left elbow. He is doing okay. Overall, his ulnar nerve symptoms have improved. He still has intermittent medial elbow pain and paresthesias associated with movement of his elbow. He is concerned about the persistent snapping of the ulnar nerve.

PHYSICAL EXAMINATION: Left elbow scar is stable. The ulnar nerve is nontender. There is no Tinel's sign. Range of motion is full. Sensation is intact distally. Intrinsic strength is normal. There is marked left ulnar nerve subluxation at the cubital tunnel.

TREATMENT PLAN: I reviewed the clinical findings. The patient's questions were answered. Treatment options were discussed.

Additional surgery may be indicated to address the ulnar nerve instability. Options would include ulnar nerve transposition or medial epicondylectomy. The timing of additional surgery would be elective, and I believe observation is appropriate at this time.

I asked the patient to obtain a second opinion regarding additional surgery. Follow up for second opinion with HSA M.D. Work status is no restriction.

NEXT VISIT: After second opinion.

CHART NOTES

The patient was in the office today for evaluation of left elbow. The history is as given by Dr. Sagerman.

PHYSICAL EXAMINATION: On examination, his symptoms are reproduced with elbow flexion and extension with subluxation of the ulnar nerve.

The soft tissues are soft. I don't think that there would be a problem with proceeding with a second surgery at this point.

Because his symptoms are present both at rest, though aggravated with flexion extension, it may be that an epicondylectomy would not be enough. I would favor a submuscular transposition and have reviewed reasonable expectations of outcome of such a surgery with Mr. Dulberg as well as potential risks and complications. He believes that he would proceed and I have discussed this

RE: Paul Dulberg
O/V: 9/11/03

Dear Dr. Grobman:

I had the opportunity to examine your patient, Paul Dulberg, concerning his left arm. He reports persistent numbness and tingling in the ulnar nerve distribution of the left hand following a motor vehicle accident which occurred in March, 2002. He has had conservative treatment including injections, medications and therapy. A nerve conduction study from May, 2002 and repeat study in December, 2002 showed evidence of ulnar neuropathy at the elbow.

PHYSICAL EXAMINATION: Examination in the left arm shows positive Tinel sign at the cubital tunnel with local sensitivity. Range of motion is full. Sensation is diminished in the ulnar nerve distribution. There is slight weakness of the intrinsic muscles and positive Froment's sign. There is no visible atrophy. Circulation is normal distally.

X-RAY EXAMINATION: X-rays of the left elbow are negative.

IMPRESSION: Left cubital tunnel syndrome.

TREATMENT PLAN: I explained the diagnosis and treatment options. Surgery is indicated on an elective basis for cubital tunnel release. The patient requested to proceed with surgery. This may be scheduled at his convenience.

Thank you for the opportunity to participate in his care.

Sincerely,

Scott D. Sagerman, M.D.

RE: PAUL DULBERG
OV: 02/27/2012

Dear Dr. Sek:

On February 27, 2012, I evaluated your patient, Mr. Paul Dulberg, concerning his right arm. He sustained a laceration of his forearm from a chainsaw accident on June 28, 2011. He developed symptoms of numbness in the small finger with weakness. He was treated with therapy. He had an EMG test and MRI scan.

PAST MEDICAL HISTORY: Remarkable for arthritis and cervical disc disease

MEDICATIONS: Naproxen, Tramadol, Cyclobenzoprine, Flexetine.

PHYSICAL EXAMINATION: The right forearm shows a 7 cm. transverse scar at the ulnar aspect of the mid forearm. There is local tenderness and sensitivity to percussion with a positive Tinel sign and paresthesias radiating into the small finger. There is also sensitivity at the cubital tunnel region. Wrist and elbow motion are unrestricted. There is no visible atrophy. He is unable to adduct the small finger. Flexion strength is grossly normal. Sensation is decreased to light touch in the small finger only with inconsistent two point discrimination.

X-RAY EXAMINATION: Outside films of the right forearm from June 20, 2011 were reviewed. There is no fracture or foreign body.

MRI films of the right forearm from February 3, 2012 were reviewed. No abnormality is seen.

A nerve conduction study by Dr. Levin from August 10, 2011 shows no evidence of diffuse neuropathy.
Sporadic Nerve damage.

IMPRESSION: Right forearm laceration with probable partial ulnar nerve injury.

TREATMENT PLAN: I explained the diagnosis. For further evaluation, the patient was referred for additional electrodiagnostic testing including an EMG.

Occupational therapy reports were reviewed.

I explained the potential indication for surgery for nerve exploration, pending review of the electrical study.

He will follow-up after the EMG. Work status is no restriction.

If you have any further questions regarding Mr. Paul Dulberg, please feel free to contact me.

Sincerely,

Scott D. Sagerman, M.D.

CHART NOTE:
The patient was in the office today for evaluation of the right hand. He reports no change in his symptoms.

He had an EMG test by Dr. Levin, and the report from March 13, 2012 shows no evidence for neuropathy. The EMG portion showed no denervation, and ulnar nerve conduction was within normal limits.

PHYSICAL EXAMINATION: The right forearm scar is stable and nontender. There is sensitivity to percussion with a positive Tinel sign at the ulnar aspect of the scar. Adduction of the small finger remains limited consistent with a positive Wartenberg's sign.

TREATMENT PLAN: I explained the findings of the EMG test. Treatment options were given. He does not wish to pursue any surgery at this time.

A therapy referral was given for strengthening exercises and scar management.

NEXT VISIT: Six weeks or PRN.

CHART NOTE:
The patient was in the office today for evaluation of the right arm. He reports persistent pain with use of his arm, especially gripping activities. He has had additional therapy which has been beneficial. He reports no change in his symptoms of numbness which is not bothersome. However, his function is limited due to his pain symptoms.

PHYSICAL EXAMINATION: The right forearm scar is tender at the ulnar aspect with a positive Tinel sign and local sensitivity. Composite finger flexion is full. There is no triggering or locking, there is no clawing. Wartenberg sign is positive. Intrinsic strength is slightly weak.

TREATMENT PLAN: I reviewed the diagnosis and treatment options. The possible surgical indication for ulnar nerve neurolysis was discussed. Before deciding on surgery, the patient will contact Dr. Levin for discussion of medication to address his nerve-related pain symptoms.

He will also see Dr. Biafora for a second opinion regarding possible surgical intervention.

Patient ID:	80330
Patient Name:	PAUL DULBERG
Date of Birth:	03/19/1970
Date of Service:	05/17/2012

CHART NOTE:
The patient was seen in the office today for evaluation of the right upper extremity. Mr. Dulberg is a patient of Dr. Sagerman's who presents today for a second opinion, referred by Dr. Sagerman. Briefly, Mr. Dulberg is a 41 year old, right hand dominant male who on June 28, 2011 sustained a chain saw injury to the right forearm. The patient states that he was told he had a partial nerve injury in the emergency room. Today, he reports some weakness in his right hand. He reports numbness in his right small and ring fingers at rest with occasional tingling. He also reports occasional shooting, burning type pain which radiates both proximally and distally from the area of the injury in the proximal forearm. This occurs several times a day at rest and more predictably with use. He denies ny previous injuries. He has undergone electrodiagnostic tests in the recent past. He was recently seen by Dr. Levin a few days ago and has been taking Neurontin over the past couple of days. The patient is currently applying for disability, secondary to his injury as he states that he is unable to perform his previous work activities.

PAST MEDICAL HISTORY: Arthritis, migraine headaches.

PAST SURGICAL HISTORY: Ulnar nerve decompression at the elbow with anterior transposition.

MEDICATIONS: Neurontin, Naproxen, Flexitine, Tramadol, Cyclobenzoprine.

ALLERGIES: No known drug allergies.

SOCIAL HISTORY: He smokes one pack of cigarettes per day.

PHYSICAL EXAM: Examination of the right upper extremity – elbow motion is from 0 to 140 degrees with full forearm rotation which is painless. There is a positive Tinel at the cubital tunnel through to approximately several centimeters distal to this. There is a transverse swelling and a healed scar, several millimeters in length in the proximal third of the forearm on the ulnar side. There is a positive Tinel over the scar at the most volar radial aspect of the scar. There is also significant tenderness at the scar to deep palpation on its most ulnar and distal border near the ulna. The Tinel over the most volar and radial aspect of the scar radiates into the ulnar digits. Moving two point discrimination in the small finger is 6-7 mm. There appears to be good strength to first dorsal

Interosseous testing. Negative Froment's sign. Positive Wartenberg's. Full digital motion. He has good strength to DIP flexion of the small and ring fingers. There is pain at the scar on its most dorsal and ulnar border with resisted DIP flexion of the small finger. FCU function also appears to be intact, also eliciting pain at the scar. Electrodiagnostic studies dated March 13, 2012 has been reviewed.

ASSESSMENT: Approximately one year status post right forearm laceration with likely partial ulnar nerve injury, with ulnar nerve neuritis.

PLAN: The nature of the patient's condition has been explained in detail. All of his questions were answered. The patient may benefit from an ulnar nerve exploration with neurolysis. I would recommend this also include a cubital tunnel decompression with possible anterior transposition. He understands that this will not likely improve the motor deficits in his hand, however, it may improve he pain to his forearm. An ulnar nerve repair of a partial laceration is unlikely at this point. He also has a separate and distinct tenderness in the most dorsal ulnar aspect of the wound. He may require exploration of this portion of the scar as well. The patient would like some time to think about this. He will continue to be treated with the Neurotin under the neurologist. He will follow-up with Dr. Sagerman in four weeks.

NEXT VISIT: Four weeks.

CHART NOTE:
The patient was in the office today for evaluation of the right elbow. He reports no change in his symptoms despite medication. He has side effects from the medication which interfere with functioning. He would like to proceed with surgery which was discussed with Dr. Biafora previously. He had additional therapy, but this was discontinued due to lack of progress.

PHYSICAL EXAMINATION: Examination of the right elbow and forearm is unchanged. A positive Tinel sign is present at the cubital tunnel without ulnar nerve subluxation. The forearm scar is stable with tenderness and sensitivity to percussion. He indicates pain with gripping activities localized to the forearm region and resulting in increased numbness in his ring and small fingers with weakness of his grip.

TREATMENT PLAN: I reviewed the diagnosis and treatment options. The surgical indication was discussed. Informed consent was obtained for the procedure. He understands the risks, benefits and possible complications of surgery as well as the expected outcome. The prognosis is guarded in terms of symptom improvement. However, he feels that any improvement in symptoms would be beneficial in terms of his arm functioning.

He was advised to contact the neurologist to report his symptoms associated with the use of Neurontin medication. Medical clearance will be obtained from his primary care physician before surgery is scheduled.

NEXT VISIT: After surgery.

COMPLICATIONS: None.

TOURNIQUET TIME: 1 hour.

FINDINGS: The right cubital tunnel showed thickening of the cubital tunnel ligament with scarring of the ulnar nerve to the floor of the cubital tunnel and local constriction. The nerve also appeared constricted at the flexor pronator aponeurosis at the distal aspect of the cubital tunnel. Also, a thick arcade of Struthers was present proximal to the cubital tunnel, though the ulnar nerve was not visibly constricted at this level.

The right forearm, the site of the previous chainsaw laceration revealed extension to the subcutaneous tissue and fascia overlying the flexor carpi ulnaris muscle. A piece of retained absorbable suture material was present. The muscle fibers were intact. The ulnar nerve was intact beneath the muscle belly. There was no visible scarring around the ulnar nerve at this level.

DESCRIPTION OF PROCEDURE: Informed consent was obtained from the patient. Prophylactic IV antibiotic was given. He received medical clearance from his primary care physician. Regional block anesthetic was administered by the

anesthesiologist in the right upper extremity. The right arm was prepped and draped sterilely. A sterile tourniquet was applied to the right upper arm, and it was elevated following exsanguination of the limb.

A longitudinal incision was made over the posteromedial aspect of the right elbow centered at the cubital tunnel. Under loupe magnification, the subcutaneous tissue was dissected. Superficial veins were ligated with bipolar cautery. A branch of the medial antebrachial cutaneous nerve was identified. This was gently retracted safely and protected. The fascia was incised proximal to the cubital tunnel, and the ulnar nerve was visualized. The cubital tunnel ligament was divided and completely released. The flexor pronator aponeurosis was also incised and released, and the nerve was dissected distally into the musculature where motor branches were identified. The release was then carried proximally, and the arcade of Struthers was divided and completely released. The ulnar nerve was inspected. The nerve was mobilized from adhesions with gentle blunt dissection. Nerve gliding was checked and found to be satisfactory. The ulnar nerve was stable at the cubital tunnel. The field was irrigated with antibiotic solution. The subcutaneous tissue was reapproximated with buried Vicryl sutures, and the skin edges were reapproximated with nylon sutures.

Attention was then directed to the forearm scar. A longitudinal incision was made over the ulnar aspect of the mid forearm centered at the site of the scar. Under loupe magnification, the subcutaneous tissue was dissected. The fascia was visualized. Superficial vein was ligated with bipolar cautery. The dermis was elevated off of the scarred fascia with blunt dissection. The retained suture material was removed. The muscle fibers were visualized and found to be in continuity. The ulnar nerve was exposed in the interval between the flexor digitorum and flexor carpi ulnaris muscle bellies. The nerve was dissected proximal and distal from the region of the laceration. The nerve was completely intact at this level with no visible scarring or adhesions. The field was irrigated with antibiotic solution. The subcutaneous tissue was reapproximated with buried Vicryl sutures, and the skin edges were reapproximated with nylon sutures.

A sterile bulky gauze dressing was applied. The tourniquet was deflated. Circulation returned to the right arm
with normal capillary refill distally. The patient was transported to recovery in stable condition. He tolerated the procedure well. There were no complications. An arm sling was applied for protection.

PATIENT: DULBERG, PAUL
MRN: 1585839
DOB: 03/19/1970

PHYSICIAN: LEVIN, MD, KAREN
EXAM: MR FOREARM W/ AND W/O 73220
DOS: 02/03/2012

EXAMINATION: MRI examination of the right forearm without and with intravenous contrast infusion..

CLINICAL HISTORY: History of right forearm trauma with a chainsaw. Possible neuroma, nerve impingement or injury in the forearm. Possible tendon disruption. It appears that the patient had some difficulty holding still during image acquisition. There is motion artifact on this examination. Weakness in the fourth and fifth fingers. Pain in the forearm and hand.

TECHNIQUE: Multiplanar T1 and T2-weighted spin-echo pulse sequences and STIR sequence. Post-infusion multiplanar T1-weighted sequences were performed. A skin marker was taped to the point of maximal symptoms.

Contrast: 15 cc of gadolinium was infused.

FINDINGS: There is no bone abnormality seen. The bone marrow signal characteristics are normal.

There is no cystic or solid mass appreciated. The visualized muscles have normal signal characteristics.

There is no abnormal soft tissue infiltration or induration. Specifically, in the area of the skin marker which is marking the point of maximal symptoms, there is no soft tissue abnormality appreciated.

There is no abnormality identified along the course of the ulnar nerve in the forearm.

IMPRESSION: There is no forearm abnormality appreciated. This does not exclude the possibility of an ulnar nerve impingement or injury but there is no gross mass or abnormal infiltration along the expected course of the ulnar nerve. No obvious tendon or muscle abnormality appreciated at this time.

Thank you for referring your patient to Open Advanced MRI. If you have any questions, Dr. Levin, please feel free to contact me at my direct line which is: 630.885.2100.

Mr. Hans Mast

RE: Paul Dulberg

Dear Mr. Mast,

Mr. Dulberg was previously seen by my associate, Dr. Mitchell Grobman, in 2002 for left ulnar neuropathy, and had surgery and essentially became asymptomatic by 2007 and who had never had difficulty in his right arm. Approximately a month prior to the evaluation, he had been holding a branch for a neighbor when the chainsaw came up and cut his right forearm. He was taken to Northern Illinois Medical Center where they put in inner stitches in the muscle and outer stitches. He originally had very significant pain, but as the pain was getting better, he started noticing that he had numbness in his fifth digit in the inner aspect of his forearm. He had not been dropping things. It was mostly just a tingling and a numb feeling. He denies ever having any right-sided symptoms or right-sided injuries. His examination was significant for a healing scar in the right forearm and for decreased light touch, pinprick, and temperature sensation in the ulnar distribution of the right arm. His strength was normal. Given the distribution, it was felt that this was a branch neuropathy to the sensory nerves. I did have him undergo nerve conductions to make sure that the median and ulnar nerves were all without involvement and they were. I recommended that he see a hand surgeon as well just to be certain that there were no other treatment options for him; however, most likely this was just a sensory branch neuropathy that may improve or may result in permanent numbness in the distribution that he was showing numbness. Mr. Dulberg should followup if any additional symptoms develop or if he wished to try any neuropathic pain treatment if it became painful and not just numb.

Sincerely,

Karen Levin, MD (endm)

Dear Medical Records Custodian:

Enclosed with this letter is a Subpoena for Deposition, a HIPAA Records Release Authorization and a check in the amount of $20.00, the legal witness fee.

Please be advised that your appearance on the date indicated is **not** necessary. Case: *Paul Dulberg v. David Gagnon, Caroline McGuire and Bill McGuire*
(McHenry County Case No. 12 LA 178)

Dear Mr. Accardo:

Written Discovery

Enclosed herewith you will find my clients' response to Mr. Gagnon's written discovery. I note that the interrogatory response is in need of Mr. McGuire's sworn signature. I anticipate having that to you in short order. I do not anticipate changes in the interrogatory answers as Mr. McGuire has already answered interrogatories issued by Plaintiff.

Enclosed herewith you will also find written discovery for response by Mr. Gagnon. Please let me know if you have any questions regarding same.

Deposition Notices

This letter will confirm receipt of your deposition notices: Wednesday, October 31, 2012 at 1:00 p.m. for David Gagnon and Thursday, November 29, 2012 at 1:00 p.m. for Carolyn and Bill McGuire.

Since David Gagnon is your client, I am assuming the notice contains a misnomer and that you really intend to depose Paul Dulberg on October 31, 2012. That date works for me. I can do Mr. Dulberg's deposition that day. Perhaps we can do Mr. Gagnon's deposition that day as well. If we are going to do both, I am proposing that we begin Mr. Dulberg at Noon and Mr. Gagnon at 3:00 p.m. (or immediately following Mr. Dulberg's depositon).

I have no quarrel presenting Mr. and Mrs. McGuire for deposition, but I cannot do that on November 29, as I already have depositions set. I have not cleared the dates with my clients yet, but I am open on November 26, November 27 and November 28.

Please let me know if you are amenable to the deposition schedule above and, if so, your date preference for Mr. and Mrs. McGuire's deposition. By way of carbon copy, I ask Attorney Mast to relate his position on the deposition schedule proposed above. Thank you.

Very truly yours,

Home Care Instructions

IMPORTANT: We examined and treated you today on an emergency basis only. This was not a substitute for, or an effort to provide, complete medical care. In most cases, you must let your doctor check you again. Tell your doctor about any new or lasting problems. We cannot recognize and treat all injuries or illnesses in one Emergency Department visit. If you had special tests, such as EKG's or X-rays, we will review them again within 24 hours. We will call you if there are any new suggestions. You were treated today by: Ford, Apiwat W..

After your visit to our Emergency Department, you may receive a survey in the mail. We want to be sure we have given you very good care and we ask that you please fill out the survey and return it in the mail.

After you leave, please follow the instructions below.

This Information Is About Your Follow Up Care

Call as soon as possible to make an appointment to see your doctor in 10 days for suture removal. You can reach your doctor by calling their clinic phone number.

Please return to the Emergency Department in 10 days for suture removal if you would prefer to have the sutures removed in the ER. We do recommend that you follow-up with your Primary Care Physician but you can return to the ER for removal of your stitches if you choose..

This Information Is About Your Illness and Diagnosis

WOUND CARE (with stitches)
Your wound was closed with stitches. These are small threads that keep the skin closed to help it heal. You have 3 internal and 11 external stitches. These should be removed in 10 days.

At home, please follow these instructions:
- Wash your hands before touching the dressing or wound.
- Keep the wound clean and dry.
- After 2 days, wash the wound gently with warm water and soap. Pat it dry.
- Put a light dressing on it if it rubs or there is drainage.

Call your doctor if:
- you have redness, pain, or swelling in the area of your stitches.
- your wound drains pus.
- your stitches come out before your wound is healed.
- you have any new or bothersome symptoms.

This is Information About Your New Medications - Start taking as prescribed.

HYDROCODONE and ACETAMINOPHEN (Vicodin, Vicodin ES, Lortab, Lortab elixir, Zamicet, Norco, Zydone, Anexsia, Anolor, Bancap HC)

Take this medicine by mouth with food in the following dose: one 10mg/325mg tablet every 4 to 6 hours if needed for pain. Do not take more than as directed per day (24 hours).

This is a mixture of medicines (hydrocodone and acetaminophen) used to relieve moderate to severe pain. This medicine may be used for other reasons, as prescribed by your doctor.

Side effects may include:
- sleepiness or dizziness
- upset stomach, nausea or vomiting
- constipation

Other side effects may occur, but are not as common. Allergy would show up as: rash or itching, facial or throat swelling, wheezing or shortness of breath. This medicine can be habit forming if used for a long period of time.

Follow these instructions:
- Never take more of this medicine than prescribed. Too much acetaminophen in your body can cause liver damage.
- Read the labels of non-prescription medicines before taking them. Many contain acetaminophen. To avoid an overdose, do not take any other medicines that contain acetaminophen.
- Talk to your doctor or pharmacist before taking medicines for sleep, colds or allergies. Severe drowsiness may occur.
- Do not share this medicine with others as this medicine is a controlled-substance. Sharing this medicine with others is against the law.
- To avoid constipation while taking this medicine:
  - Drink plenty of liquids. Try to drink 8 to 10 eight-ounce glasses of water or juice each day.
  - Include extra fiber in your diet.
  - Exercise daily.
- Watch for signs of dependence:
  - feeling that you "cannot live without this medicine".
  - you need more of this medicine than before to get the same relief.
- Do not drink alcohol, drive or operate machinery until you know how this medicine affects you.
- Store this medicine away from heat, moisture or direct light.
- If you are taking this on a regular schedule and you miss a dose, take it as soon as possible. If it is almost time for your next dose, skip the missed dose and return to your regular schedule. Do not double the doses.
- Talk with your doctor before taking any other medicines (including vitamins and herbals) as you may require additional monitoring.

Call your doctor if you have:
- any sign of dependence or allergy.
- increased pain not helped by the pain medicine.
- slow, weak breathing.
- seizures.
- slow or irregular heart beat.
- a yellow-color to your skin or eyes, or dark urine.
- stomach pain.
- unusual or extreme tiredness.
- any new or severe symptoms.

CEFADROXIL (Duricef)

Take this medicine until gone in the following dose: 500 mg by mouth 2 times a day for 5 days.

Side effects may include:

- diarrhea
- upset stomach, nausea or vomiting
- headache

Other side effects may occur, but are not as common. An upset stomach is not a sign of allergy. Allergy would show up as **rash or itching, facial or throat swelling, wheezing or shortness of breath.**

Follow these instructions:

- Space your medicine doses evenly throughout the day. This medicine works best if there is a constant amount in your blood.
- Take this medicine **with food** to avoid an upset stomach.
- Swallow the capsule and tablet form of this medicine whole with a full 8-ounce glass of water.
- For diabetics, this medicine can cause false test results when testing your urine for sugar. Talk with your doctor if you have questions.

- Store the tablet or capsule form of this medicine away from heat, moisture or direct light.
- Store the liquid form of this medicine in the refrigerator. Shake the liquid well before each use.
- If you miss a dose, take it as soon as possible. If it is almost time for your next dose, skip the missed dose. Do not double the doses.
- **Talk with your doctor before taking any other medicines (including vitamins and herbals) as you may require additional monitoring.**

Call your doctor if you have:

- any sign of allergy.
- no improvement after you've taken all the medicine.
- a seizure.
- any sign of a new infection (fever, general aches, chills, or unusual tiredness or weakness).
- ongoing nausea, vomiting or stomach pain.
- white patches in your mouth.
- women: itching in or change in discharge from your vagina.
- inflammation (pain and swelling) in your intestine during treatment or up to weeks after you've finished this medicine:
  - ongoing diarrhea
  - stomach pain or cramping
  - blood or mucus in your bowel movements
- any new or bothersome symptoms.

SMOKING CESSATION

Smoking is the nation's leading preventable cause of death. It significantly increases the risk of coronary heart disease, stroke and cancer. In fact, more than half of all smoking related deaths in America each year are from heart disease, stroke, or other cardiovascular diseases. The good news is, that one year after quitting, the risk of heart disease is cut in half. After five to fifteen smoke-free years, the risk is that of a person who never smoked!

If you or someone you love is interested in quitting, consider joining our "Freedom From Smoking "classes for adults. Centegra Health System and the McHenry County Department of Health have partnered together to bring you an effective program that will help you quit smoking. Call 877-CENTEGRA, (877-236-8347) for more information regarding this program. To speak with a counselor immediately, call the Illinois Tobacco line at 1-866-QUIT-YES.

PAIN MANAGEMENT AFTER DISCHARGE:

A person may feel less pain just by being in familiar surroundings. Here are some frequently asked questions about your pain management:

- What can I do to help my pain management? A person's level of relaxation and their environment can affect their pain. If you are tired, over stimulated (too many visitors) are anxious about your diagnosis, or a past experience with a hospitalization, your pain perception may be impacted and your tolerance decreased. Ask questions, and inform us about any problems or concerns that you may have, re: pain. Partner with your health team for your best pain management.
- What if the medication is not working? Tell your health-care provider; physician, home health nurse, etc. You may need a different dose or type of medicaton.
- What if I feel I'm not getting enough pain control? Talk to your physician or home health nurse about it. Together you may be able to develop a plan to prevent or ease your pain. Depending on the cause of your pain, your health-care provider may suggest exercise, use of heat/cold, massage, repositioning, immobilization of the affected part, or distraction such as music or rest.
- There are other methods of pain management. Let your health-care provider assist you in finding the best one for you.

Weight management is one step to help maintain a healthy lifestyle. For certain medical problems, such as congestive heart failure, weight should be monitored daily.

YOU ARE THE MOST IMPORTANT FACTOR IN YOUR RECOVERY.

Follow the above instructions carefully. Take your medicines as prescribed. Most important, see a doctor again as discussed.

If you have problems that we have not discussed, or your problem changes or gets worse, Call or visit your doctor right away. If you cannot reach your doctor, return to the Emergency Department immediately.

Centegra Health System is very concerned about your safety and well being. As part of our efforts to always provide very good care, any medications you received during this visit were reconciled with medication you are currently taking. This reconciliation was based on the information you or your representative provided regarding your current medications and allergies.

"I have received this information and my questions have been answered. I have discussed any challenges I see with this plan with the nurse or physician."

Home Care Instructions

IMPORTANT: We examined and treated you today on an emergency basis only. This was not a substitute for, or an effort to provide, complete medical care. In most cases, you must let your doctor check you again. Tell your doctor about any new or lasting problems. We cannot recognize and treat all injuries or illnesses in one Emergency Department visit. If you had special tests, such as EKG's or X-rays, we will review them again within 24 hours. We will call you if there are any new suggestions. You were treated today by: Ford, Apiwat W..

After your visit to our Emergency Department, you may receive a survey in the mail. We want to be sure we have given you very good care and we ask that you please fill out the survey and return it in the mail.

After you leave, please follow the instructions below.

This Information is About Your Follow Up Care

Call as soon as possible to make an appointment to see your doctor in 10 days for suture removal. You can reach your doctor by calling their clinic phone number.

Please return to the Emergency Department in 10 days for suture removal if you would prefer to have the sutures removed in the ER. We do recommend that you follow-up with your Primary Care Physician but you can return to the ER for removal of your stitches if you choose..

This Information is About Your Illness and Diagnosis

WOUND CARE (with stitches)
Your wound was closed with stitches. These are small threads that keep the skin closed to help it heal. You have 3 internal and 11 external stitches. These should be removed in 10 days.

At home, please follow these instructions:
- Wash your hands before touching the dressing or wound.
- Keep the wound clean and dry.
- After 2 days, wash the wound gently with warm water and soap. Pat it dry.
- Put a light dressing on it if it rubs or there is drainage.

Call your doctor if:
- you have redness, pain, or swelling in the area of your stitches.
- your wound drains pus.
- your stitches come out before your wound is healed.
- you have any new or bothersome symptoms.

This is Information About Your New Medications - Start taking as prescribed.

HYDROCODONE and ACETAMINOPHEN (Vicodin, Vicodin ES, Lortab, Lortab elixir, Zamicet, Norco, Zydone, Anexsia, Anolor, Bancap HC)

Take this medicine by mouth with food in the following dose: one 10mg/325mg tablet every 4 to 6 hours if needed for pain. Do not take more than as directed per day (24 hours).

This is a mixture of medicines (hydrocodone and acetaminophen) used to relieve moderate to severe pain. This medicine may be used for other reasons, as prescribed by your doctor.

Side effects may include:

Follow these instructions:

- Read the labels of non-prescription medicines before taking them. Many contain acetaminophen. To avoid an overdose, do not take any other medicines that contain acetaminophen.
- Talk to your doctor or pharmacist before taking medicines for sleep, colds or allergies. Severe drowsiness may occur.
- Do not share this medicine with others as this medicine is a controlled-substance. Sharing this medicine with others is against the law.

  - you need more of this medicine than before to get the same relief.
- Do not drink alcohol, drive or operate machinery until you know how this medicine affects you.
- Store this medicine away from heat, moisture or direct light.
- If you are taking this on a regular schedule and you miss a dose, take it as soon as possible. If it is almost time for your next dose, skip the missed dose and return to your regular schedule. Do not double the doses.

Follow these instructions:

- Space your medicine doses evenly throughout the day. This medicine works best if there is a constant amount in your blood.
- Take this medicine with food to avoid an upset stomach.
- Swallow the capsule and tablet form of this medicine whole with a full 8-ounce glass of water.

  - ongoing diarrhea
  - stomach pain or cramping

SMOKING CESSATION

Smoking is the nation's leading preventable cause of death. It significantly increases the risk of coronary heart disease, stroke and cancer. In fact, more than half of all smoking related deaths in America each year are from heart disease, stroke, or other cardiovascular diseases. The good news is, that one year after quitting, the risk of heart disease is cut in half. After five to fifteen smoke-free years, the risk is that of a person who never smoked!

If you or someone you love is interested in quitting, consider joining our "Freedom From Smoking "classes for adults. Centegra Health System and the McHenry County Department of Health have partnered together to bring you an effective program that will help you quit smoking. Call 877-CENTEGRA, (877-236-8347) for more information regarding this program. To speak with a counselor immediately, call the Illinois Tobacco line at 1-866-QUIT-YES.

PAIN MANAGEMENT AFTER DISCHARGE:

A person may feel less pain just by being in familiar surroundings. Here are some frequently asked questions about your pain management:

- What can I do to help my pain management? A person's level of relaxation and their environment can affect their pain. If you are tired, over stimulated (too many visitors) are anxious about your diagnosis, or a past experience with a hospitalization, your pain perception may be impacted and your tolerance decreased. Ask questions, and inform us about any problems or concerns that you may have, re: pain. Partner with your health team for your best pain management.
- What if the medication is not working? Tell your health-care provider; physician, home health nurse, etc. You may need a different dose or type of medicaton.
- What if I feel I'm not getting enough pain control? Talk to your physician or home health nurse about it. Together you may be able to develop a plan to prevent or ease your pain. Depending on the cause of your pain, your health-care provider may suggest exercise, use of heat/cold, massage, repositioning, immobilization of the affected part, or distraction such as music or rest.
- There are other methods of pain management. Let your health-care provider assist you in finding the best one for you.

Weight management is one step to help maintain a healthy lifestyle. For certain medical problems, such as congestive heart failure, weight should be monitored daily.

YOU ARE THE MOST IMPORTANT FACTOR IN YOUR RECOVERY.

Follow the above instructions carefully. Take your medicines as prescribed. Most important, see a doctor again as discussed.

If you have problems that we have not discussed, or your problem changes or gets worse, Call or visit your doctor right away. If you cannot reach your doctor, return to the Emergency Department immediately.

Centegra Health System is very concerned about your safety and well being. As part of our efforts to always provide very good care, any medications you received during this visit were reconciled with medication you are currently taking. This reconciliation was based on the information you or your representative provided regarding your current medications and allergies.

"I have received this information and my questions have been answered. I have discussed any challenges I see with this plan with the nurse or physician."

ASSESSMENT:
DIAGNOSIS: 906.1-LATE EFFECT OPEN WND EXTREM
PROCEDURES: 99203-NEW Detailed, Low Complexity

PLAN:
Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I would like to see the official report of the EMG/NCS. We will obtain this report. There is no evidence of a complete injury to his ulnar nerve on physical exam. His complaints are likely muscular in origin. He may have some superficial sensory complaints as well. I do not think he needs any surgical intervention at this time. I did recommend and provided him with a prescription for occupational therapy to work on strengthening and conditioning of the forearm muscles. They can also perform some pain control modalities. I would like to see him back in 4-6 weeks' time to see if therapy is of some assistance to him. I will contact him by phone if his EMG is significantly abnormal. Otherwise we will discuss it at the next followup visit. Patient was in agreement with the plan.

Prescription: No data for Prescription

HPI: Patient is a 41-year-old male who is right-hand dominant. He was referred by Dr. Karen Levin, MD, neurology, for evaluation of an injury he sustained to his right medial forearm in June of 2011. He apparently was using a chain saw when he accidentally struck the volar medial aspect of his right forearm in roughly the mid forearm range with a chain saw. He had a large open wound down to muscle. He was seen in the emergency department where the wound was debrided and the muscle was sewn together and the skin was closed. He followed up with his primary care provider. He has noted persistent pain which he describes as intermittent and shooting in character radiating from the laceration site. He occasionally has intermittent numbness and tingling in the ring and small finger. He reports grip weakness and no endurance with wrist flexion and gripping. He has not had therapy to date. He did have an EMG/NCS performed by Dr.Levin in August of 2011. Per the patient the study was normal.
I saw the patient a proximally one month ago recommended a course of occupational therapy. He has attended one or 2 sessions thus far. I also obtained and the EMG nerve conduction study to review. The patient reports no improvement in symptoms. He thinks that therapy is not helpful. He feels he is getting weaker. He feels burning in the forearm region. He also asked me about disability paperwork.

Skin: Bilateral upper extremities: no open wounds or skin changes. Well-healed laceration in the mid forearm region right side ulnar aspect. No evidence of infection.
Neuro: Bilateral upper extremities: light touch intact all digits, no weakness or wasting.
Focused Exam: Elbow with full and painless motion in the right side. Forearm compartments are soft there is no obvious deformity. He has preserved wrist flexion and extension strength. He can make a full fist and has full extension of all digits. He has no intrinsic or thenar atrophy. He has 5/5 APB and intrinsic strength. He has a negative Froment sign. He does have a positive Wartenberg sign. FDP to the small finger is 5/5.

IMAGING: None today.

DIAGNOSIS: 906.1-LATE EFFECT OPEN WND EXTREM
PROCEDURES: 99213-ESTABLISHED Expanded, Low Complexity

ASSESSMENT & PLAN:
Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I reviewed the EMG/NCS which is a normal study. There is no evidence of ulnar nerve injury. Given the location of his injury this is the only significant problem I can imagine from this wound. There is no evidence of any nerve or tendon injury. He may have some residual soreness and some superficial sensory abnormalities but this should improve over time. Our recommendation is simply continued therapy. No need for surgical intervention that I can foresee. Unfortunately do not have anything further to offer the patient at this time. I would be happy to see him back in the future on an as needed basis.

Dear Mr. Thomas:

I am writing in follow-up to my letter of November 4, 2013, which included a deposition subpoena and notice of deposition requiring your appearance for an oral examination under oath on January 17, 2014, at 1:00 p.m. in the law offices of Thomas J. LETTER OF PROTECTION
(SAMPLE)

Patient/Client:

Patient Account Number:

I hereby authorize FACILITY to furnish Hans MAST (Attorney) Attorney at Law, with my complete medical records, including examination, treatment diagnosis and prognosis in regard to the accident in which I was involved. I understand that such authorization should be accompanied by an executed Authorization for Disclosure of Protected Health Information in the form attached hereto prior to FACILITY's release of such records.

I give irrevocable authorization to my attorney to pay directly to FACILITY all such sums due for therapy rendered to me as a result of the accident. I further grant a lien on and/or assign any settlement or judgment in which I receive from any claim(s) filed as a result of the accident in an amount equal to the lesser of the charges for the therapy services rendered, or the maximum amount permitted by law. I further agree to execute such further documents as necessary for FACILITY to preserve its right to enforce said lien and/or assignment.

I fully understand that I am directly and fully responsible to FACILITY for services rendered to me. This agreement is made solely for the purpose of affording FACILITY additional protection. I understand that payment of this obligation in full is not contingent on any settlement, judgment or verdict by which I may eventually recover such fees.

In addition, I understand and agree that payment in full on my account should be made within _____ months of this date unless other financial arrangements have been made. I understand that my account shall be forwarded to FACILITY's collection agency in the event I do not timely pay the account or make other financial arrangements. I further understand that the obligations recited herein (including the obligation to pay for services rendered) shall continue in full force and effect, and shall be binding upon me, my heirs, administrators, executors, successors, and assigns, until and unless all fees for services rendered have been paid in full.

7/28/11 Dr. Karen Levin / Associated Neurology

Hx: Seen by Dr. Mitchell Grobman - associate, in 2002 for left ulnar nueuropathy and had surgery and recovered by 2007. No prior problems with right arm. Last

month holding a branch for a neighbor when chain saw came up and cut his right forearm. Taken to ER. Put in stitches in muscle and outer stictches. Originally a lot of pain. Started noticiing numbness in 5th digit. Droping things.

Ex: strength normal. Did NCV study. Normal ncv. Ref to hand surgeon

Imp: Could be branch neuropathy to sensory nerves. Most likely just a sensory branch neuropathy that could improve or result in permanent numbness.

T: referral to hand surgeon.

8/10/11 Dr. Karen Levin

Hx: here for NCV test. Normal. Main median and ulnar nerves normal.

T: To see a hand surgeon.

Muscle sewn together. Saw PCP. Noted persistent pain. Intermittant N and T in ring and small fingers. No PT yet. Had EMG 8/11 normal. Uses a mouse for 20 min then pain.

Ex:

Dx: late effect open wound extremeity No evidence of complete injury to ulnar nerve on Exam. Cpts muscular in origin. Maybe superficial sensory problem. No surgical interventtion needed. Ref to OT. Return 4-6 weeks. Review EMG.

Imp: Reviwed EMG which was normal. No evidence of ulnar nerve injury or tendon injury. Maybe some residual soreness but should resolve over time. Contiue PT.

1/30/12 Dr. Karen Levin

Hx: PT asked that he be reevaluated. Still gettting numbness and Ting and burning in spots on ulnar side of hand and arm. Filing for disability.

2/3/12 Open Advanced MRI / Dr. Karen Levin

Hx: trauma with chainsaw. Possible neuroma, nerve impingement or injury to forearm. Possible tendon disruption. Difficulty holding still during image. Pain in forearm and hand w/ weakenss in 4and 5 digits.

Imp: no forearm abnormailty. Does not exclude possible ulnar nerve impingement or injury. But no gross mass seen along ulnar nerve. No obvious muscle abnormality.

2/6/12 Dynamic Hand Therapy

Hx: 10/10 pain w activity, very specific detail. Difficulties holding can, maintaining fist, using RUE very little.

Ex: large scar on mid forearm between elbow and innner side of wrist. Positive tinel. Subjective. Sensistivitiy on cubital tunnel on right side. Wrist and elbow motion unrestricted. No atrophy. Flexion normal. MRI normal. NCV (8/11) was normal. Does not rule out possibility of nerve injury.

Imp: right forearm laceration, may be ulnar nerve issues. Wound was a deep laceration. Possible nerve damage.

6/6/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: taking neurontin from Dr. Levin for pain. Concerned with side effects. Symptoms the same. Side effects as well. Pt wants to proceed with surgery. PT lacks progress.

Ex: positive Tinel at cubital tunnel. Forearm scar is stable. W/ tenderness.

T: discussed surgery. This visits diff from last. Last showed PT benefiting. This one shows PT not helping.

6/11/12 Dr. Karen Levin

Tele Call: frequent twinges of pain and discomfort.

7/9/12 Dr. Scott Sagerman / Hand Surgery Associates

SURGERY

Two things to do in surgery: 1) right elbow cubital tunnel release. (Pinched nerve in the elbow)(also done in 2003) 2) scarring of the muscle.

Proc: very dep laceration did reach to the nerves but the muscle fibers actually intact. Nerve was not cut and no visible scarring around the ulnar nerve. This accounts for Pauls symptoms. That the scarring of the muscle accounts for Pauls pain. Cubital tunnel problem was causing the N ant T in the digits. Two independant and separate f indings. CT is not likely related. The muscle scarring is.

7/11/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: doing well. Function increased and symptoms improved. Strength improved. Still some soreness in elbow - normal. No restrictions.

Dx: Cubital tunnel release/

7/16/12 Dynamic Hand Therapy

Hx: Difficulty opening containers such as bottles, tools, lifting, pourinng liquids. Gripping and pulling utensils.

Ex: stitches in place. No drainage, no symptoms of infection. T and Burning in ulnar forearm. L'd elbow forearm, wrists and digits, moderate edema in forearm/wrist/digits

Dx: Ulnar nerve injury - chainsaw on right forearm laceration;

T: moist heat, PT

7/23/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: doing fine

7/30/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: doing well and arm feels much better w/ increased function.

8/27/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: Doing ok. Elbow was sore. In PT. Grip strength increased and hand function better.

12/3/12 Dr. Scott Sagerman / Hand Surgery Associates

Hx: eval of right hand and right arm. Still has some weakness and pinch strength and difficulty grasping objects. Doing HEP. **Onset of left elbow symptoms** with no prior trauma.

Dx: left lateral epicondylitis. Deg of the elbow - tennis elbow. Causes are wear and tear and degenerative. Whether due to over compensation b/c of injry -thats a stretch.

DATE: October 30, 2013

SUBJECT: **DISCOVERY DEPOSITION OF DR. SCOTT SAGERMAN**

CASE: PAUL DULBERG

On October 15, 2013, I attended the discovery deposition of Dr. Scott Sagerman regarding his treatment of our client, Paul Dulberg. To review, Paul was injured in a chainsaw accident in which his right forearm was significantly injured and damaged after a chainsaw struck it while helping a friend cut down a tree limb.

FAVORABLE TESTIMONY:

In summary, the doctor was able to tie the forearm pain and symptoms being muscle pain and weakness in gripping and pulling things in his forearm to the accident. It was a deep laceration to his forearm and there was some injury to those muscles and nerves which may have been causing the pain in that area. The surgery to the forearm and treatment of that he felt he could easily relate to the accident.

UNFAVORABLE TESTIMONY:

In contrast to the positive points, the cubital tunnel injuries and subsequent surgeries and treatment that Paul had in his right elbow would be difficult to relate back to the accident and the doctor basically said that it was too far distal from where the chainsaw struck him to have been caused by the accident. Furthermore, any subsequent pain Paul would have had to his left arm would also be a stretch to show that that was somehow related to overcompensate him from the right arm. The doctor did note that it was possible, but I don't know that we can firmly count on his testimony to show that to be a viable claim.

SUMMARY:

On October 15, 2013, I attended the discovery deposition of Dr. Scott Sagerman in Paul Dulberg's case. The doctor identified himself as an orthopedic surgeon with specialties in hand and upper extremities. He did have some recollection of Paul from the numerous treatments of him. This accident occurred on 04/28/11 and the first visit with Dr. Sagerman was on 02/27/12. He does know that he had seen Dr. Sek prior to this as well as Dr. Levin and Dr. Talerico.

The doctor did note that he had seen Paul sometime in the past in 2003 and 2004 when he was diagnosed with cubital tunnel syndrome in his left arm. This is an ulnar nerve condition regarding

compression of the nerve in the elbow. The ulnar nerve is the main nerve behind the elbow in the cubital tunnel area. It extends to the inner side of the hand and provides muscle function to the hand. The symptoms of this syndrome would be numbness and tingling on the inside of the hand, mainly the ring finger and the small finger especially. This is significant as it also notes the same symptoms that Paul had displayed, along with others, in his current treatment with Dr. Sagerman. It is further significant because Dr. Sagerman was not able to tie that cubital tunnel syndrome and symptoms to the chainsaw accident. This earlier treatment in 2003 and 2004 showed the same symptoms and the same type of ailment as he was currently claiming of with his right hand now. The onset of this prior treatment was a motor vehicle accident in March, 2002. The doctor did not have anything else specific regarding that. He noted that the common causes of cubital tunnel syndrome is a compression on the nerve. It may be spontaneous or as a result of injury to the vicinity or it can also be from strenuous activities. As to whether it can be caused simply by repetitive use, he doesn't think so. He noted that these quite type of activities generally cannot create such an ailment. Back then, surgery was done to correct the cubital tunnel and it was successful.

Bring us up to more modern times, in February, 2012, he first came to him for the injury resulting from the chainsaw accident. He didn't really know how it occurred but he does have some history in his medical records. In February, 2009, he did send a letter to Dr. Sek regarding his treatment with Paul which he had on his first visit on February 27, 2012. He noted in that letter that Paul developed symptoms of numbness in the small finger as well as weakness and that he treated it with therapy and had an EMG test and an MRI scan. He noted that he did not have the emergency room notes at that time. Regarding the past medical history, it does note some arthritis as well as cervical disc disease. The doctor did not know much about this but it looked like it was in the neck area. There were various medications that he was on at the time as well and noted that they were for anti-inflammatory, a pain medicine, depression, and for muscle spasms. Regarding his exam on that first appointment of February 27, 2012, the doctor basically read from his notes on that day. He noted there was a large scar on the mid forearm between the elbow and the inner side in the wrist. He noted positive Tinel sign which is conducted by tapping over the nerve area and it will show pain or indicated nerve dysfunction or injury. This is a subjective finding. On the cubital tunnel region on the right side, there was sensitivity there also. Wrist and elbow motion were unrestricted and there were no visible signs of atrophy. He noted that he was able to abduct the small finger which is to pull it sideways from the other fingers. His flexion strength was normal. X-rays showed no fracture. He reviewed the films of the MRI from February 3, 2012 and noticed no abnormalities. The MRI report noted weakness in the ring and small finger. He noted that even though there was nothing abnormal in the images that he was not too exclude the possibility that the nerve was still injured. He noted that just because it's not in the film that there may still be some nerve injuries in and around the point where Paul was complaining. The nerve conduction study was also conducted on August 10, 2011, and there was no evidence of neuropathy. This is a negative finding, however, it does not rule out the possibility of the nerve injury. Same as the MRI report. That being said, it is important to note that simply because these two studies, being the MRI and nerve conduction study, did not show anything abnormal, that does not mean that there is not a nerve injury still present. His impression was that the right forearm was a laceration with probable partial ulnar nerve injury. At the scar area, he noted there was a deep laceration there and there may be ulnar nerve issues. It is possible that the nerve could have been directly damaged. He was showing signs of an ulnar nerve injury and local sensitivity in that area of his forearm. That is further suggestions of such a nerve injury. He then sent him for a follow up for an EMG. This is different from a nerve conduction study in that the nerve conduction study studies and evaluates the velocity of the nerve impulses. An EMG tests the muscle to be indicative of an injury. He wanted the EMG because it

will give a more complete analysis. He felt in his opinion that was warranted. They also brought up surgery at that point as a nerve exploration to expose the area of injury. The EMG was ordered and no work restrictions were put into place. The EMG was done with Dr. Levin on March 13. The next visit with Dr. Sagerman was on 04/02/12.

On 04/02/12, Dr. Sagerman had another appointment with Paul Dulberg in his office. He had the EMG tests which was done by Dr. Levin and it showed no evidence of neuropathy. It also showed that the nerve conduction was within normal limits. At that point, there was no documentation that the nerve was not functioning properly. There was still a positive Tinel sign which is subjective and there is still the abduction of the small finger with a positive Wartenbergs sign. It is noted that he did not wish to pursue surgery at this time but there were some recommendations given for strength exercises and scar management.

The next visit was on 05/14/12 and there were new complaints at this point. Paul was having issues with persistent pain with the use of his arm as well as gripping and squeezing things. There was no change in the symptoms of numbness or tingling in his fingers, but that was not bothersome to him. His function in the arm was limited due to pain symptoms. Upon examination, he found that the Wartenberg sign is still positive and his intrinsic strain is slightly weak. This weakness was of the muscles in the hand that control the fingers. There was also no clawing. This would be an abnormal posturing to the finger due to the muscle issues. This is commonly seen in ulnar nerve injuries. However, there were no signs of clawing in Paul on that date. The discussion was had regarding possible surgery for an ulnar nerve neurolysis. This was more of an exploratory issue to find out what was bothering the nerve and to decompress the nerve. His next visit, he was ordered to follow up with a different doctor, being Dr. Sam Biafora. This was to get a second opinion on his pains and it was suggested by Dr. Sagerman to do this.

The next visit was on 05/17/12 with Dr. Sam Biafora. Dr. Sagerman testified as to what Dr. Biafora had noted in his records which we have. He noted in his records that he was to see Paul for a second opinion after being referred to him by Dr. Sagerman. He noted that Paul sustained a chainsaw injury to his right forearm. He noted that Paul told him that he had a partial nerve injury in the emergency room. On this day he noted weakness in his right hand as well as numbness in his right small and ring fingers at rest with occasional tingling. He also reported a shooting, burning type of pain which radiates proximally and distally from the area of the injury in the proximal forearm. He noted this occurs several times a day at rest and more predictably with use. Upon physical exam, Dr. Biafora noted that there is a positive Tinel at the cubital tunnel through to approximately several centimeters distal to that. There was also transverse swelling and a heeled scar several millimeters in length at the proximal third of the forearm on the ulnar side. He also noted that there is a positive Tinel over the scar and at the most volar radial aspect of the scar. There is also significant tenderness at the scar to deep palpation on its most ulnar and distal border near the ulna. He also noted Tinel over the most volar and radial aspect of the scar radiates into the ulnar digits. He noted there was still positive Wartenbergs signs. He did have good strength and flexation of the small and ring fingers but there is pain at the scar on its most dorsal and ulnar border with resisted DIP flexion of the small finger. His assessment was that he felt there was approximately a 1 year status post the laceration and there was likely a partial ulnar nerve injury with ulnar nerve neuritis. Dr. Sagerman explained this to be that at the site of injury, there was a potential at that location for dysfunction of the ulnar nerve. That would explain some of the symptoms Paul has had and he has been experiencing in the ulnar nerve in his hand as well. Dr. Biafora also recommended surgery and felt that the patient "may benefit from an ulnar nerve exploration with neuroysis". He also noted that he would recommend this also

to include the cubital tunnel decompression with possible anterior transposition. He noted that it will not likely improve the motor deficits in his hand but it may improve the pain that Paul is experiencing in his forearm. He noted that he also had separate and distinct tenderness in the most dorsal ulnar aspect of the wound and it may require exploration of that portion of the scar as well. Paul noted that he wanted some time to think about it before he made a decision and will follow up with Dr. Sagerman in four weeks.

The next visit was with Dr. Sagerman on 06/06/12. He noted that prior Dr. Levin had given him Neurontin to treat the nerve pain that he was having. Dr. Sagerman normally doesn't give that drug and he feels there is problems with side effects and there is a better prescription for him to have. On that date he reported no change in his symptoms despite that medication. However, he is noting some side effects from that medication which may interfere with his functioning. Paul at that time noted he would like to proceed with the surgery that was discussed with Dr. Biafora previously. He also had had additional therapy but it was discontinued due to lack of progress. He went on with the physical examination and noted that the right elbow and forearm was unchanged. There was a positive Tinel sign present at the cubital tunnel without ulnar nerve subluxation. The forearm scar is stable with tenderness and sensitivity to percussion. He indicates he had pain when he was trying to grip things which was localized to the forearm region and resulted in increased numbness in his ring and small fingers as well as weakness in his grip. The surgery was discussed and Paul noted that he feels that any improvement in the symptoms will be beneficial in terms of his arm functioning normal. There was a bit of a discrepancy here between this visit and the last one in which on 05/14 it was noted that physical therapy seems to be getting him some benefit but as of the 06/06 appointment, it is noted that physical therapy is not helpful. The doctor could not explain the difference between the 2 or why that was the case.

Paul then had his surgery on 07/09/12. The doctor noted at that time that prior to the surgery regarding Paul's prognosis, the doctor was very guarded in his prognosis. He didn't really know how much improvement there was going to be as it is hard to predict how much better it is when you don't know the extent of the nerve injury, which is all the more reason why you are going in for the exploration to determine the extent of the surgery.

The surgery was on July 9th. The pre-operative diagnosis was the same and this was an outpatient type surgery. There were 2 things that they were going after in the surgery. No. 1 was the right elbow cubital tunnel issue and release and there was also the pain in the right forearm. Regarding the cubital tunnel release which is done in the right elbow, it did show thickening of the cubital tunnel ligament with scarring of the ulnar nerve to the floor of the cubital tunnel with local constriction. This basically meant a pinched nerve in the elbow area. This was in essence the same type of procedure or injury Paul had suffered back in 2003 and 2004. However, the doctor could not 100% confirm that as he did not have those records. What he found would be consistent with cubital tunnel syndrome and its causes. He did note regarding the surgery to the right forearm that there was a very deep laceration into the muscle which covered the nerves but the muscle fibers were actually in tact. He noted in his report that the site of the previous chainsaw laceration revealed extension to the subcutaneous tissue and fascia overlying the flexor carpi ulnaris muscle. He noted that the nerve was not cut and there was no visible scarring around the ulnar nerve at that level. The findings in this were important for us in that it showed that these were consistent with his complaints. It seemed that from the laceration, what he found would account for Paul's symptoms. He basically went on to discuss the scarring of the muscle and whereas it is maybe difficult to say, he felt the scarring of the muscle may have caused the ailments that Paul was suffering from. He also noted

that as far as the cubital tunnel, that would account for the ailments that Paul was suffering in his ring and pinky finger. These are two separate independent findings at two different sites. In summary as I will go over later, it basically noted that the doctor would tie the injury to the forearm and that weakness and lack of grip to our accident. However, he would not tie the cubital release in his elbow to the accident as he felt it was too distal from where the accident actually occurred.

The next visit was on 07/11/12. There did not seem to be any real issues at that time and the patient was doing well. His function had increased and his symptoms had improved and his strength had increased. He still had some soreness in his elbow and that was normal. As far as restrictions at work, he did not feel that Paul should have any as doing work sitting at a computer.

The next visit was on 07/23/12. At that time, Paul seemed to be doing fine.

He then saw him on 07/30/12 and noted also that he was doing well and his arm feels much better and he has increased function and feels that his symptoms have improved.

The next visit was on 08/27/12. On this, he noted that Paul was doing okay and that his elbow was sore and he was participating in therapy. His progress at this time was satisfactory and his grip strength had increased and his hand function had improved. There were no signs of infection or any other issues. He was told to continue his therapy and come back in about 6 weeks.

His next visit was on 10/22/12 and he noted he was feeling better. His function has improved and he is gaining strength. The sensation in his fingers has improved and he is pleased he can now grasp objects better then he did before the surgery. He still has some difficulty with certain activities regarding gripping and pinching of small objects. He was examined and it was noted that he will continue his home exercises as well as those given by his therapist. He can also advance in his activities is as tolerated. He noted on this time that they discussed work activities and that Paul noted he is currently unemployed and plans to pursue disability. They noted the next visit in 6 weeks.

The next visit was on 12/03/12. On this date, he was in for an evaluation of his right hand and right arm. He noted he still has some weakness and pinch strength and difficulty grasping objects. But he is performing his home exercises. It is at this point that he also notices an onset of left elbow symptoms with no proceeding trauma. After an examination, the doctor's impression was that he had a left lateral epicondylitis. This is a degeneration of the elbow which basically is tennis elbow. Causes are normal wear and tear and are degenerative. The fibers lose their strength and it causes issues. This can be caused by blunt trauma or certain actions can cause it also. As to whether it will be caused by over compensation, that would seem to be a stretch, according to Dr. Sagerman. Most of it was the same and this examination was predominantly on the left arm and again, as stated before, he did not really feel that these injuries would be caused by over compensating from the injury he had to his right arm.

The next visit was on 03/25/13 and all is really noted regarding the right arm on this visit is he did have some intermittent soreness in the right forearm area. Nevertheless, the scar was stable and there was mild sensitivity at the most ulnar aspect of it. At the right forearm scar, a padded elbow sleeve was provided for protection and he may follow up on an as needed basis if symptoms worsen. On that date, it looks like he gave a steroid injection, but was not asked significantly about this during the deposition. Again, this seems to be an unrelated ailment.

The next visit was on 08/26/13. On that visit, he did come in for some slight intermittent pains in his right forearm in the muscle cramping area. He noted that the right forearm scar was stable with no focal tenderness to sensitivity. But he did describe intermittent muscle spasms with discomfort despite the medication. Dr. Kathleen Kajawa suspects possible dystonia. He was then referred out to a neurologist.

Regarding the doctor's opinions of his injuries in relation to the chainsaw accident, he noted that the chainsaw injury was a deep laceration of the right forearm. He felt that the injury to the forearm from the chainsaw was definitely related to our accident. He felt also that the surgery to that forearm was also related to the accident and the pain and symptoms that he was feeling in his right forearm would all be relatable to the chainsaw accident. As for the prognosis of that, he felt Paul should remain stable within a certain degree of certainty, the symptoms should remain unchanged as to what he would expect.

Regarding the cubital tunnel syndrome, he did not feel that that was related to the accident. He felt that the injury to the elbow where the cubital tunnel is located as well as the surgical procedure that they did there was too far from the forearm to relate it to the accident. As to whether the injury to the forearm could be some kind of a by-product of the cubital tunnel, he really didn't think so. He felt that the injury from the chainsaw was too distal to the elbow to effect the elbow in the way that they found. The injury would account for the scarring as well as the lack of grip and weakness that he was having in his forearm. However, the cubital tunnel would account more for the numbness and tingling in his fingers and that he could not attribute the accident.

Regarding any disability, as for the forearm, he would have difficult time pushing, pulling or lifting certain things at times. He would have to accommodate for that impairment in doing those activities. He could do some of those things to the extent that his forearm and the strength would allow him to do that. As to whether he can work at all from the forearm injury, he can work as it is tolerated. The doctor did note as to whether that makes him totally disabled would probably not be the case. Especially with the fact that he works at a computer most of the time. As to whether there is any overlap between the injury to the forearm which is relatable and the cubital tunnel which does not seem to be relatable, the doctor did note that you really have to look at the medical records to evaluate which of the charges could be deemed relatable versus not. They are two distinct and separate surgeries and incidents, but nevertheless, there are probably is some overlap between the two of them and there is treatment for both areas on any number of the doctor visits. As to whether the left elbow pain could anyway be related, the doctor felt it would be quite a stretch to do that but it really would depend on what you are doing with your left elbow. He would not commit. After surgery, as to whether he had full disability, it really depended on his function and his abilities to do whatever it is he was being asked to do. Again, as to whether it is a total disability, the doctor felt it was hard to say. But if it was a computer based job and he would not have to do any strenuous work, such as pulling, pushing, lifting, or whatnot, and if he stuck mostly to the computer-based jobs, he doesn't know if he could say he would be totally disabled.

HISTORY & PHYSICAL

PATIENT: Dulberg, Paul **AGE:** 41 years old **EXAM DATE:** 12/02/11

CHIEF COMPLAINT: Right forearm pain.

HPI: Patient is a 41-year-old male who is right-hand dominant. He was referred by Dr. Karen Levin, MD, neurology, for evaluation of an injury he sustained to his right medial forearm in June of 2011. He apparently was using a chain saw when he accidentally struck the volar medial aspect of his right forearm in roughly the mid forearm range with a chain saw. He had a large open wound down to muscle. He was seen in the emergency department where the wound is here it at the muscle was sewn together and the skin was closed. He followed up with his primary care provider. He has noted persistent pain which he describes as intermittent and shooting in character radiating from the laceration site. He occasionally has intermittent numbness and tingling in the ring and small finger. He reports grip weakness and no endurance with wrist flexion and gripping. He has not had therapy to date. He did have an EMG/NCS performed by Dr.Levin in August of 2011. Per the patient the study was normal. I do not have that study available at this moment. He currently is not working but is a graphic designer by training. He reports using a computer mouse for 20 minutes causes significant forearm pain.

Appearance: No distress, good color on room air. Alert and cooperative.
Skin: Bilateral upper extremities: no open wounds or skin changes.
Neuro: Bilateral upper extremities: Median, radial and ulnar nerves are motor and sensory intact. Light touch intact all digits, no weakness or wasting.
Vascular: Bilateral upper extremities: palpable radial pulses and brisk capillary refill.
Focused Exam: Examination of his right upper extremity reveals his elbow has normal painless range of motion. No focal tenderness to palpation. Collateral ligaments are stable. His forearm compartments are soft. He has a well-healed transverse laceration on the volar medial mid forearm level. There is no erythema, drainage, or fluctuance at the level of the laceration. There is no tenderness to palpation at the laceration site. There is some apparent muscle

He does not demonstrate a clawed posture. He has a negative Froment sign. He has a positive Wartenberg sign. Wrist flexion and extension is 5 out of 5 strength. He has a palpable FCU and ECU tendons at the level of the wrist. They have appropriate tension.

DIAGNOSIS: 906.1-LATE EFFECT OPEN WND EXTREM

PROCEDURES: 99203-NEW Detailed, Low Complexity

PLAN:

Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I would like to see the official report of the EMG/NCS. We will obtain this report. There is no evidence of a complete injury to his ulnar nerve on physical exam. His complaints are likely muscular in origin. He may have some superficial sensory complaints as well. I do not think he needs any surgical intervention at this time. I did recommend and provided him with a prescription for occupational therapy to work on strengthening and conditioning of the forearm muscles. They can also perform some pain control modalities. I would like to see him back in 4-6 weeks' time to see if therapy is of some assistance to him. I will contact him by phone if his EMG is significantly abnormal. Otherwise we will discuss it at the next followup visit. Patient was in agreement with the plan.

HPI: Patient is a 41-year-old male who is right-hand dominant. He was referred by Dr. Karen Levin, MD, neurology, for evaluation of an injury he sustained to his right medial forearm in June of 2011. He apparently was using a chain saw when he accidentally struck the volar medial aspect of his right forearm in roughly the mid forearm range with a chain saw. He had a large open wound down to muscle. He was seen in the emergency department where the wound was debrided and the muscle was sewn together and the skin was closed. He followed up with his primary care provider. He has noted persistent pain which he describes as intermittent and shooting in character radiating from the laceration site. He occasionally has intermittent numbness and tingling in the ring and small finger. He reports grip weakness and no endurance with wrist flexion and gripping. He has not had therapy to date. He did have an EMG/NCS performed by Dr.Levin in August of 2011. Per the patient the study was normal.
I saw the patient a proximally one month ago recommended a course of occupational therapy. He has attended one or 2 sessions thus far. I also obtained and the EMG nerve conduction study to review. The patient reports no improvement in symptoms. He thinks that therapy is not helpful. He feels he is getting weaker. He feels burning in the forearm region. He also asked me about disability paperwork.

ASSESSMENT & PLAN:

Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I reviewed the EMG/NCS which is a normal study. There is no evidence of ulnar nerve injury. Given the location of his injury this is the only significant problem I can imagine from this wound. There is no evidence of any nerve or tendon injury. He may have some residual soreness and some superficial sensory abnormalities but this should improve over time. Our recommendation is simply continued therapy. No need for surgical intervention that I can foresee. Unfortunately do not have anything further to offer

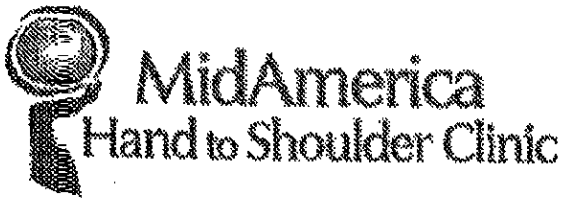
DIAGNOSIS: 906.1-LATE EFFECT OPEN WND EXTREM
PROCEDURES: 99213-ESTABLISHED Expanded, Low Complexity

ASSESSMENT & PLAN:



Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I reviewed the EMG/NCS which is a normal study. There is no evidence of ulnar nerve injury. Given the location of his injury this is the only significant problem I can imagine from this wound. There is no evidence of any nerve or tendon injury. He may have some residual soreness and some superficial sensory abnormalities but this should improve over time. Our recommendation is simply continued therapy. No need for surgical intervention that I can foresee. Unfortunately do not have anything further to offer the patient at this time. I would be happy to see him back in the future on an as needed basis.

HISTORY & PHYSICAL

PATIENT: Dulberg, Paul **AGE:** 41 years old **EXAM DATE:** 12/02/11

CHIEF COMPLAINT: Right forearm pain.

HPI:

Patient is a 41-year-old male who is right-hand dominant. He was referred by Dr. Karen Levin, MD, neurology, for evaluation of an injury he sustained to his right medial forearm in June of 2011. He apparently was using a chain saw when he accidentally struck the volar medial aspect of his right forearm in roughly the mid forearm range with a chain saw. He had a large open wound down to muscle. He was seen in the emergency department where the wound is here it at the muscle was sewn together and the skin was closed. He followed up with his primary care provider. He has noted persistent pain which he describes as intermittent and shooting in character radiating from the laceration site. He occasionally has intermittent numbness and tingling in the ring and small finger. He reports grip weakness and no endurance with wrist flexion and gripping. He has not had therapy to date. He did have an EMG/NCS performed by Dr. Levin in August of 2011. Per the patient the study was normal. I do not have that study available at this moment. He currently is not working but is a graphic designer by training. He reports using a computer mouse for 20 minutes causes significant forearm pain.

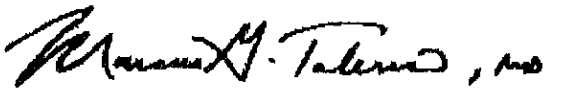
Report Date: June 21, 2012 **Patient:** Dulberg, Paul R **DOS:** 12/02/11



Vitals: **No data for Vitals.**
Appearance: No distress, good color on room air. Alert and cooperative.
Skin: Bilateral upper extremities: no open wounds or skin changes.
Neuro: Bilateral upper extremities: Median, radial and ulnar nerves are motor and sensory intact. Light touch intact all digits, no weakness or wasting.
Vascular: Bilateral upper extremities: palpable radial pulses and brisk capillary refill.
Focused Exam: Examination of his right upper extremity reveals his elbow has normal painless range of motion. No focal tenderness to palpation. Collateral ligaments are stable. His forearm compartments are soft. He has a well-healed transverse laceration on the volar medial mid forearm level. There is no erythema, drainage, or fluctuance at the level of the laceration. There is no tenderness to palpation at the laceration site. There is some apparent muscle incongruity. Distally his hand demonstrates no atrophy. He has 5 out of 5 intrinsic strength. 5 out of 5 APB strength. He can make a full fist with full extension of all digits. He does not demonstrate a clawed posture. He has a negative Froment sign. He has a positive Wartenberg sign. Wrist flexion and extension is 5 out of 5 strength. He has a palpable FCU and ECU tendons at the level of the wrist. They have appropriate tension.

PLAN:
Plan: I reviewed findings, treatment options, and recommendations with the patient concerning the forearm complaints he has. I would like to see the official report of the EMG/NCS. We will obtain this report. There is no evidence of a complete injury to his ulnar nerve on physical exam. His complaints are likely muscular in origin. He may have some superficial sensory complaints as well. I do not think he needs any surgical intervention at this time. I did recommend and provided him with a prescription for occupational therapy to work on strengthening and conditioning of the forearm musoles. They can also perform some pain control modalities. I would like to see him back in 4-6 weeks' time to see if therapy is of some assistance to him. I will contact him by phone if his EMG is significantly abnormal. Otherwise we will discuss it at the next followup visit. Patient was in agreement with the plan.

Defendants, BILL McGUIRE and CAROLYN McGUIRE, by and through their attorneys, Cicero, France, Barch & Alexander, PC, hereby moves the Court for an Order granting them leave to file a cross-claim for contribution against Defendant David Gagnon. McGUIRE DEFENDANTS' MOTION TO VACATE PROTECTIVE ORDER

Defendants, CAROLYN McGUIRE and BILL McGUIRE, by their attorneys, Cicero, France, Barch & Alexander, PC, herby move this Court to vacate the Protective Order entered on August 8, 2012 and modified on April 3, 2013. In further support of the Motion, Defendants Carolyn and Bill McGuire state as follows:

1. On or about May 5, 2012, the Plaintiff, Paul Dulberg, filed a multiple count complaint alleging he suffered injuries as a result of negligence on the parts of David Gagnon, Carolyn McGuire and Bill McGuire. In general, Plaintiff alleges he sustained severe and permanent injuries when a chain saw being operated by David Gagnon made contact with his arm.

2. On July 31, 2012, Plaintiff filed a Motion for Protective Order wherein he alleged that Plaintiff's counsel (Attorney Hans Mast) wanted an opportunity to photograph and inspect the subject "chain saw" and any parts, accessories and manual/paperwork pertaining to the saw. In his prayer for relief, Plaintiff requested a protective order declaring the "saw and its parts and

accessories and paperwork/manual be preserved and protected without destruction or loss until further order of this court." A copy of Plaintiff's Motion for Protective Order is attached as "Exhibit A."

3. On August 8, 2012, the Court granted Plaintiff's Motion for Protective Order. A copy of the Court's order of August 8, 2012 is attached as "Exhibit B."

4. On March 20, 2013, the depositions of Carolyn McGuire and Bill McGuire proceeded with counsel for Plaintiff (Attorney Hans Mast) and counsel for Co-Defendant (Attorney Perry Accardo) present. Prior to the start of the depositions the "chain saw" allegedly involved in the injury to Plaintiff was presented for inspection and photographing. Plaintiff's counsel photographed the chain saw and also photographed the Owner's Manual.

5. On April 3, 2013, the Court's protective order was modified to allow the owners to utilize the chain saw and Owner's Manual in the ordinary course. The protective order further directed that the owners shall not sell or discard the chain saw, parts, accessories and associated paperwork without further order of the court. A copy of the Amended Protective Order dated April 3, 2013 is attached as "Exhibit C."

6. Subsequent to the entry of the amended protective order the Plaintiff reached a settlement agreement with Carolyn McGuire and Bill McGuire as to all matters in controversy, whereupon the negligence claims and contribution claims against them were dismissed with prejudice. A copy of the Good Faith Finding and Order of Dismissal entered on January 22, 2014 is attached as "Exhibit D."

7. With the claims against Carolyn McGuire and Bill McGuire fully resolved, counsel for the McGuires issued a letter to Attorney Mast and Attorney Accardo seeking an agreement to

have the pending protective order vacated. A copy of the February 12, 2014, letter to counsel is attached as "Exhibit E."

8. During a chance meeting in the Winnebago County Courthouse shortly after the February 12 letter issued, Attorney Accardo advised informally that he had no objection to vacating the protective order. Counsel for the McGuires has not heard from Attorney Mast.

9. Counsel for Plaintiff and Counsel for Defendant Gagnon have both had an opportunity to photograph and inspect the subject chain saw. In addition, both attorneys have copies of the Owner's Manual associated with the subject chain saw.

10. The subject chain saw was brand new on the date of Plaintiff's claimed injury and Plaintiff does not allege or claim that he was injured due to a manufacturing defect associated with the subject chain saw.

11. No prejudice will result to Plaintiff or Defendant Gagnon should this Court vacate the Amended Protective Order.

12. No just reason exists to delay the McGuires' request to vacate the Amended Protective Order.

WHEREFORE, the Defendants, Carolyn McGuire and Bill McGuire, respectfully pray this court to vacate the Amended Protective Order dated April 3, 2013.

Case: *Paul Dulberg v. David Gagnon, Caroline McGuire and Bill McGuire*
(McHenry County Case No. 12 LA 178)

Dear Counsel:

With my departure from the case I feel compelled to address the subject of the chain saw that was involved in Mr. Dulberg's injury. Early on in the case a protective order was entered which prohibited Mr. and Mrs. McGuire from destroying or otherwise disposing of the chain saw and any associated documentation. The primary purpose behind the order of protection was to preserve the chainsaw and associated documentation until such time that Plaintiff's counsel could inspect and photographs same.

On March 20, 2013, the chain saw and owner's manual were made available for inspection and photographing. Plaintiff's counsel inspected and photographed the chainsaw. Plaintiff's counsel also secured a photocopy of the owner's manual.

On April 3, 2013, the protective order was modified to allow the Plaintiffs to use the subject chainsaw, owner's manual and associated paperwork in the ordinary course. The order further provides, however, that the owners may not destroy, dispose of, or sell the items without further order of the court.

Given the above, I am concerned about the possibility of a spoliation claim in the event the McGuires destroy, dispose of, or otherwise sell the chainsaw following my departure from the case. Please advise in writing whether you believe there is any reason to maintain the protective order as it currently exists. If not, I believe it makes sense to have the April 3, 2013 version of the protective order vacated.

I look forward to hearing from both of you at your earliest convenience.

Very truly yours,

RONALD A. BARCH

DSC OPERATIVE REPORT

DATE OF OPERATION: 03/10/2004

PREOPERATIVE DIAGNOSIS: Recurrent left ulnar neuritis at the cubital tunnel with ulnar nerve subluxation.

POSTOPERATIVE DIAGNOSIS: Recurrent left ulnar neuritis at the cubital tunnel with ulnar nerve subluxation.

PROCEDURE: Revision of left ulnar neurolysis at the cubital tunnel with anterior transposition.

SURGEON: Scott D. Sagerman, MD

ASSISTANT: John R. Ruder, MD

ANESTHESIA: General.

COMPLICATIONS: None.

TOURNIQUET TIME: 1 hour and 10 minutes.

OPERATIVE FINDINGS: The patient developed symptomatic ulnar nerve subluxation at the cubital tunnel with recurrent ulnar neuritis following previous cubital tunnel release surgery. Exploration revealed marked iristability of the ulnar nerve which easily subluxated anterior to the medial epicondyle with elbow flexion. Scar formation was present surrounding the ulnar nerve within the cubital tunnel.

TECHNIQUE: Consent was signed by the patient, and he was taken to the operating room. General anesthesia was given. The left arm was prepped and draped sterilely. A sterile tourniquet was applied to the upper arm and inflated following exsanguination of the limb.

The previous longitudinal scar over the cubital tunnel was incised at the posteromedial aspect of the elbow, and the incision was extended proximally and distally in longitudinal fashion for additional exposure. Under loupe magnification, the subcutaneous tissue was dissected. The branches of the medial antebrachial cutaneous nerve were identified, dissected, and retracted safely. The skin flaps were elevated, and the ulnar nerve was exposed.

Neurolysis was performed to mobilize the ulnar nerve from surrounding scar tissue. The release was carried proximally and to the upper arm. The medial intermuscular septum was excised. The arcade of Struthers were absent. The release was then carried distally into the flexor/pronator musculature. The aponeurosis was divided to mobilize the ulnar nerve. The articular branch had to be divided to allow adequate mobility of the ulnar nerve for anterior transposition. Small horizontal vessels were ligated and divided, preserving the longitudinal blood supply to the ulnar nerve.

The ulnar nerve was then transposed to the medial epicondyle, assuring a straight line course of the nerve. There was no kinking of the nerve either proximally or distally. The transposition was then stabilized using submuscular flap. The flexor/pronator muscle fascia was incised to create a Z-plasty, permitting lengthening of the muscle fascia. The muscle fibers were then divided, with ligation of perforating vessels. The ulnar nerve was placed in the submuscular position, maintaining a thin layer of muscle fibers deep to the nerve. The fascia was then reapproximated in a lengthened position using 3-0 Vicryl sutures, maintaining the ulnar nerve in the transposed position without excessive tension on the nerve. The elbow was taken through a range of motion, and the nerve showed excellent gliding with no visible angulation of the nerve.

The field was irrigated with antibiotic solution. One free end of a cutaneous nerve branch was identified. This was placed deep to the medial arm fascia which was sutured with Vicryl, to prevent symptomatic neuroma formation.

The subcutaneous tissue was reapproximated with buried 5-0 Vicryl sutures, and the skin edges were reapproximated with 5-0 nylon sutures. A sterile bulky gauze dressing was applied followed by posterior plaster splint to maintain the elbow in a flexed position. The patient was awoken, extubated, and transported to the recovery room in stable condition. He tolerated the procedure well. There were no complications.

OPERATIVE REPORT

Preoperative Diagnosis:
Left cubital tunnel syndrome.

Postoperative Diagnosis:
Same.

Operation Performed:
Left cubital tunnel release.

Surgeon: Scott Sagerman, M.D.
Anesthesia: General.
Complications: None.
Tourniquet Time: 38 minutes.

OPERATIVE FINDINGS: The left ulnar nerve showed obvious constriction at the distal aspect of the cubital tunnel beneath the cubital tunnel ligaments. The ligament was thickened with several bands of deep layers over the area of nerve compression. The floor of the cubital tunnel was clear. The ulnar nerve did subluxate slightly over the medial epicondyle at end range of flexion. There was no arcade of Struthers.

PROCEDURE: Consent was signed by the patient, taken to the operating room, general anesthesia was administered. The left arm was prepped and draped sterilely. A tourniquet was inflated on the upper arm following exsanguination of the limb. A longitudinal incision was made over the cubital tunnel at the posteromedial aspect of the left elbow. Under loupe magnification the subcutaneous tissues dissected, superficial veins were ligated with bipolar cautery. Branches of the medial interbrachial cutaneous nerve were identified. These were dissected and gently retracted safely using a vessel loop. The fascia was incised proximal to the cubital tunnel to expose the ulnar nerve. The nerve was dissected distally by dividing the cubital tunnel ligament, until the nerve entered the flexor/pronator fascia of the proximal forearm. The fascia was incised distally and motor branches of the ulnar nerve were seen with normal perineural fat at this level. Proximally, the nerve was dissected by dividing the arm fascia for a distance of 10 cm proximal to the epicondyle.

The ulnar nerve was inspected, adhesions around the nerve were divided with gentle blunt dissection. The nerve was noted to be constricted at the distal aspect of the cubital tunnel. Following neurolysis, tendon gliding was found to be satisfactory with elbow motion. No other areas of nerve compression were seen.

The field was irrigated with antibiotic solution. The vessel loop was removed. The subcutaneous tissues were reapproximated with 5-0 Vicryl undyed buried sutures. The skin edges were reapproximated with 5-0 and 6-0 nylon sutures. A sterile bulky compressive dressing was applied. The tourniquet was deflated, circulation returned to the left hand with normal capillary refill. The patient was

awoken and transported to the recovery room in stable condition. The patient tolerated the procedure well, there were no complications.

MEDICARE SUPPLEMENTAL INTERROGATORY TO PLAINTIFF, PAUL DULBERG

INSTRUCTIONS: Please insert your answer in the space provided following the question. If additional space is needed, so indicate in the space provided, prepare your answer on a separate paper and attach.

1. As of January 1, 2010, the Federal Government is requiring all insurance companies that pay out for injuries, whether it be for at-fault (liability), no fault or medical expense payments from an accident, product liability, workers' compensation or the like, to report whether or not the claimant is a Medicare or Medicaid recipient. A person who is 65 years or older, a person with certain disabilities, or a person with end-stage renal failure may qualify for Medicare. In compliance with that request, we are requesting the following information, which must be updated throughout the claim and will be re-asked upon closing of the claim (pursuant to Supreme Court Rule 213 and the federal law):

Has Plaintiff/Plaintiff's decedent/the minor or disabled adult for which an injury is claimed, received payments or benefits from Medicare or Medicaid? If yes, please provide the name of the recipient, the recipient's gender, the recipient's Medicare Health Insurance Card Number or Social Security Number and the recipient's date of birth. In the case where the Medicare/Medicaid recipient is a minor or disabled adult or for another reason has a guardian, custodian, conservator, or other person who makes his/her medical decisions, please provide the name of the guardian, custodian, conservator, or other person who makes the medical decisions for the minor, disabled adult, or other Medicare recipient. Please be advised that pursuant to federal law these questions must be answered in their entirety or Defendant's insurance company will not be able to issue payments out of the claim. If while this claim is pending, Plaintiff, petitioner, Plaintiff's decedent, or the minor or disabled adult for which a claim of injury is advanced in this lawsuit becomes a Medicare recipient, please update this interrogatory.

ANSWER:

Under penalties as provided by law pursuant to 735 ILCS 5/1-109 of the Code of Civil Procedure, the undersigned certifies that the statements set forth in this instrument are true and correct, except as to matters therein stated to be on information and belief and as to such matters the undersigned certifies as aforesaid that he/she verily believes the same to be true.

PATIENT:	DULBERG, PAUL	**PHYSICIAN:**	LEVIN, MD, KAREN
MRN:	1585839	**EXAM:**	MR FOREARM W/ AND W/O 73220
DOB:	03/19/1970	**DOS:**	02/03/2012

EXAMINATION: MRI examination of the right forearm without and with intravenous contrast infusion..

CLINICAL HISTORY: History of right forearm trauma with a chainsaw. Possible neuroma, nerve impingement or injury in the forearm. Possible tendon disruption. It appears that the patient had some difficulty holding still during image acquisition. There is motion artifact on this examination. Weakness in the fourth and fifth fingers. Pain in the forearm and hand.

TECHNIQUE: Multiplanar T1 and T2-weighted spin-echo pulse sequences and STIR sequence. Post-infusion multiplanar T1-weighted sequences were performed. A skin marker was taped to the point of maximal symptoms.

Contrast: 15 cc of gadolinium was infused.

FINDINGS: There is no bone abnormality seen. The bone marrow signal characteristics are normal.

There is no cystic or solid mass appreciated. The visualized muscles have normal signal characteristics.

There is no abnormal soft tissue infiltration or induration. Specifically, in the area of the skin marker which is marking the point of maximal symptoms, there is no soft tissue abnormality appreciated.

There is no abnormality identified along the course of the ulnar nerve in the forearm.

IMPRESSION: There is no forearm abnormality appreciated. This does not exclude the possibility of an ulnar nerve impingement or injury but there is no gross mass or abnormal infiltration along the expected course of the ulnar nerve. No obvious tendon or muscle abnormality appreciated at this time.

Thank you for referring your patient to Open Advanced MRI. If you have any questions, Dr. Levin, please feel free to contact me at my direct line which is: 630.885.2100.

This Diagnostic Services Agreement (the "Agreement") is entered into on January 31, 2012 by and between Global Financial Credit, LLC d/b/a MedChex (hereinafter "MedChex") and Paul Dulberg (hereinafter the "Patient"). This Agreement relates to certain medical procedures that will be provided to Patient at Open Advanced MRI of Round Lake, LLC. (hereafter the "Facility").

WHEREAS Patient agrees that Patient does not have medical insurance or any other means to pay for the procedure(s) that Patient is seeking from the Facility;

WHEREAS the Patient understands that if Patient has medical insurance Patient must submit appropriate documentation to the Facility and not sign this Agreement;

WHEREAS the Patient has been told that the Facility would not provide the procedure(s) without payment at the time of services and Patient is aware that Patient has the right to pursue other facilities or other means of payment;

WHEREAS the Patient would not otherwise be able to receive the needed medical procedure(s) without MedChex providing financing for the procedure(s);

NOW THEREFORE it is agreed that Patient will receive services from the Facility which shall be financed by MedChex. It is further agreed and acknowledged that through this Agreement MedChex will maintain a lien against Patient for the billed rate of the procedure(s) received in the amount specified in the document titled "Patient Agreement Addendum", which shall be attached hereto and signed by the Patient. Patient acknowledges and agrees that MedChex billed rate for the procedure(s) was disclosed to Patient on the Patient Agreement Addendum and that this billed rate represents MedChex standard rates and such rates may be more or less than the amount that the Facility customarily charges. Patient agrees to pay MedChex in the full lien amount representing MedChex billed rate(s) at the time that Patient's legal claim is resolved. Patient further agrees that Patient's obligation to pay MedChex is absolute and that it is Patient's responsibility to repay such lien.

Patient agrees by an through this Agreement to hereby irrevocably instruct Patient's attorney or any subsequent attorney(s) or tortfeasor's insurance carriers related to Patient's legal claim, that upon the Settlement and Distribution of Proceeds in connection with Patient's legal claim(s), that Patient's attorney protect and satisfy MedChex's lien before releasing any funds to Patient. Patient and MedChex agree that should there be a dispute in the amount owed to MedChex, Patient's attorney or tortfeasor's insurance carrier is required to hold funds pending the resolution of the dispute. Patient agrees to instruct the Party distributing funds that if the attorney-client relationship is severed, the attorney must provide MedChex with applicable tortfeasors's insurance and/or updated attorney information in order for MedChex to protect its lien. Patient agrees that if a payment is issued to Patient related to Patient's legal claim that the attorney representing Patient will be directed to deposit the check into the attorney's trust account and pay MedChex lien in full before releasing any funds to Patient.

Patient and MedChex further agree that if a dispute of any kind arises related to the procedures funded by MedChex, either MedChex or Patient may elect to have that dispute resolved by binding arbitration under the auspices of the American Arbitration Association ("AAA") such that an enforceable resolution would be determined by one or more neutral arbitrators in lieu of civil court. Patient and MedChex consent that any arbitration would occur on an individual basis using the substantive laws of the state of New York and Patient agrees that class arbitrations and class action lawsuits are not permitted. In the event that a dispute arises, it is agreed that all of the reasonable expenses associated with pursuing arbitration for the prevailing party will be reimbursed by the other party.*

Patient: Paul Dulberg _____ Date 2-3-12

Global Financial Credit, LLC: Wensley McKenney _____ Date 1/31/2012

Case: *Paul Dulberg v. David Gagnon, Caroline McGuire and Bill McGuire* (McHenry County Case No. 12 LA 178)

Dear Counsel:

With my departure from the case I feel compelled to address the subject of the chain saw that was involved in Mr. Dulberg's injury. Early on in the case a protective order was entered which prohibited Mr. and Mrs. McGuire from destroying or otherwise disposing of the chain saw and any associated documentation. The primary purpose behind the order of protection was to preserve the chainsaw and associated documentation until such time that Plaintiff's counsel could inspect and photographs same.

On March 20, 2013, the chain saw and owner's manual were made available for inspection and photographing. Plaintiff's counsel inspected and photographed the chainsaw. Plaintiff's counsel also secured a photocopy of the owner's manual.

On April 3, 2013, the protective order was modified to allow the Plaintiffs to use the subject chainsaw, owner's manual and associated paperwork in the ordinary course. The order further provides, however, that the owners may not destroy, dispose of, or sell the items without further order of the court.

Given the above, I am concerned about the possibility of a spoliation claim in the event the McGuires destroy, dispose of, or otherwise sell the chainsaw following my departure from the case. Please advise in writing whether you believe there is any reason to maintain the protective order as it currently exists. If not, I believe it makes sense to have the April 3, 2013 version of the protective order vacated.

I look forward to hearing from both of you at your earliest convenience.

Very truly yours,

RONALD A. BARCH

COUNTY OF McHENRY

PAUL DULBERG, Plaintiff, vs. DAVID GAGNON, Individually, and as Agent of CAROLINE MCGUIRE and BILL MCGUIRE, and CAROLINE MCGUIRE and BILL MCGUIRE, Individually, Defendants.	)	Case No. 12 LA 178

MOTION FOR GOOD FAITH FINDING AND FOR ORDER OF DISMISSAL WITH PREJUDICE BY DEFENDANTS BILL McGUIRE AND CAROLYN McGUIRE

Defendants, BILL McGUIRE (aka William McGuire) and CAROLYN McGUIRE (improperly named Caroline), by and through their attorneys, Cicero, France, Barch & Alexander, P.C., hereby move this Court to dismiss all claims against them with prejudice and further request this Court to find that the settlement set forth in this motion was made in good faith and within the meaning and contemplation of the Illinois Contribution Among Joint Tortfeasors Act, 740 ILCS 100/1, et seq. In support of their Motion, Defendants Bill McGuire and Carolyn McGuire state as follows:

1. On or about March 15, 2012, Plaintiff Paul Dulberg filed a multiple count complaint seeking damages for personal injuries he generally attributes to a chain saw incident that occurred on or about June 28, 2011, at and upon the premises owned by Defendants Bill McGuire and Carolyn McGuire, known commonly as 1016 West Elder Avenue, City of McHenry, County of McHenry, State of Illinois.

2. Plaintiff generally alleges that Defendant David Gagnon injured him with a chain

saw while working under the supervision and control of Defendants Bill McGuire and Carolyn McGuire. Defendant David Gagnon denies any and all liability for Plaintiff Paul Dulberg's injuries. Defendants Bill McGuire and Carolyn McGuire also deny any and all liability for Plaintiff Paul Dulberg's injuries and further deny that Defendant David Gagnon was under their control and supervision and working or acting as their employee or agent at the time of the alleged chain saw incident.

3. On February 1, 2013, Defendants Bill McGuire and Carolyn McGuire filed a cross-claim for contribution against Defendant David Gagnon. The cross-claim for contribution seeks contribution from Defendant David Gagnon for injuries claimed by Plaintiff Paul Dulberg and is based upon the terms and provisions of the Illinois Contribution Among Joint Tortfeasors Act, 740 ILCS 100/1, et seq.

4. Plaintiff Paul Dulberg and Defendants Bill McGuire and Carolyn McGuire have negotiated a settlement of all claims which Plaintiff brought or could have brought against Defendants Bill McGuire and Carolyn McGuire. The settlement was negotiated at arm's length over a substantial period of time, and with the advice of counsel on the part of both parties. There is no collusion or fraud on the part of any of the parties to the negotiation.

5. Pursuant to Section 100/2(c) of the Contribution Act, an alleged tortfeasor that settles with a claimant in good faith shall be discharged from liability for contribution to any other tortfeasors.

6. Defendants Bill McGuire and Carolyn McGuire deny and continue to deny liability to Plaintiff Paul Dulberg and further contest the nature and scope of the injuries Plaintiff Paul Dulberg attributes to the subject chain saw incident.

7. The lump-sum payment of $5,000.00 to Plaintiff Paul Dulberg by or on behalf of

Defendants Bill McGuire and Carolyn McGuire constitutes adequate consideration for purposes of a good faith settlement under Section 100/2(c) of the Contribution Act.

8. Defendants Bill McGuire and Carolyn McGuire respectfully suggest that the settlement with Plaintiff Paul Dulberg is and was made in good faith within the meaning of the Illinois Contribution Among Joint Tortfeasors Act, 740 ILCS 100/2(c).

WHEREFORE, the Defendants, BILL McGUIRE and CAROLYN McGUIRE, respectfully pray for the Court as follows:

(1) For an Order declaring that the settlement between Plaintiff Paul Dulberg and Defendants Bill McGuire and Carolyn McGuire was made and entered into in good faith within the meaning of the Illinois Contribution Among Joint Tortfeasors Act, 740 ILCS 100/1, et seq.;

(2) For an Order dismissing all civil complaints, cross-claims, counterclaims and contribution claims currently pending against Defendants Bill McGuire and Carolyn McGuire, and arising out of or otherwise connected to the injuries claimed by Plaintiff Paul Dulberg, with prejudice;

(3) For an Order declaring that any potential future claims against Defendants Bill McGuire and Carolyn McGuire, including, without limitation, claims for contribution arising out of or otherwise connected to the chain saw incident and injuries claimed by Plaintiff Paul Dulberg, are barred;

(4) For an Order declaring for purposes of Illinois Supreme Court Rule 304(a) that there is no just reason to delay enforcement or appeal of the Dismissal Order; and

(5) That this Court enter an order granting such further relief as this Court deems just.

List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on the "Name" line to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Note. If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
3. I am a U.S. citizen or other U.S. person (defined below).

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions on page 4.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

The person who gives Form W-9 to the partnership for purposes of establishing its U.S. status and avoiding withholding on its allocable share of net income from the partnership conducting a trade or business in the United States is in the following cases:

- The U.S. owner of a disregarded entity and not the entity,
- The U.S. grantor or other owner of a grantor trust and not the trust, and
- The U.S. trust (other than a grantor trust) and not the beneficiaries of the trust.

Foreign person. If you are a foreign person, do not use Form W-9. Instead, use the appropriate Form W-8 (see Publication 515, Withholding of Tax on Nonresident Aliens and Foreign Entities).

Nonresident alien who becomes a resident alien. Generally, only a nonresident alien individual may use the terms of a tax treaty to reduce or eliminate U.S. tax on certain types of income. However, most tax treaties contain a provision known as a "saving clause." Exceptions specified in the saving clause may permit an exemption from tax to continue for certain types of income even after the payee has otherwise become a U.S. resident alien for tax purposes.

If you are a U.S. resident alien who is relying on an exception contained in the saving clause of a tax treaty to claim an exemption from U.S. tax on certain types of income, you must attach a statement to Form W-9 that specifies the following five items:

1. The treaty country. Generally, this must be the same treaty under which you claimed exemption from tax as a nonresident alien.

2. The treaty article addressing the income.

3. The article number (or location) in the tax treaty that contains the saving clause and its exceptions.

4. The type and amount of income that qualifies for the exemption from tax.

5. Sufficient facts to justify the exemption from tax under the terms of the treaty article.

Example. Article 20 of the U.S.-China income tax treaty allows an exemption from tax for scholarship income received by a Chinese student temporarily present in the United States. Under U.S. law, this student will become a resident alien for tax purposes if his or her stay in the United States exceeds 5 calendar years. However, paragraph 2 of the first Protocol to the U.S.-China treaty (dated April 30, 1984) allows the provisions of Article 20 to continue to apply even after the Chinese student becomes a resident alien of the United States. A Chinese student who qualifies for this exception (under paragraph 2 of the first protocol) and is relying on this exception to claim an exemption from tax on his or her scholarship or fellowship income would attach to Form W-9 a statement that includes the information described above to support that exemption.

If you are a nonresident alien or a foreign entity not subject to backup withholding, give the requester the appropriate completed Form W-8.

What is backup withholding? Persons making certain payments to you must under certain conditions withhold and pay to the IRS a percentage of such payments. This is called "backup withholding." Payments that may be subject to backup withholding include interest, tax-exempt interest, dividends, broker and barter exchange transactions, rents, royalties, nonemployee pay, and certain payments from fishing boat operators. Real estate transactions are not subject to backup withholding.

You will not be subject to backup withholding on payments you receive if you give the requester your correct TIN, make the proper certifications, and report all your taxable interest and dividends on your tax return.

Payments you receive will be subject to backup withholding if:

1. You do not furnish your TIN to the requester,

2. You do not certify your TIN when required (see the Part II Instructions on page 3 for details),

3. The IRS tells the requester that you furnished an incorrect TIN,

4. The IRS tells you that you are subject to backup withholding because you did not report all your interest and dividends on your tax return (for reportable interest and dividends only), or

5. You do not certify to the requester that you are not subject to backup withholding under 4 above (for reportable interest and dividend accounts opened after 1983 only).

Certain payees and payments are exempt from backup withholding. See the Instructions below and the separate Instructions for the Requester of Form W-9.

Also see *Special rules for partnerships* on page 1.

Updating Your Information

You must provide updated information to any person to whom you claimed to be an exempt payee if you are no longer an exempt payee and anticipate receiving reportable payments in the future from this person. For example, you may need to provide updated information if you are a C corporation that elects to be an S corporation, or if you no longer are tax exempt. In addition, you must furnish a new Form W-9 if the name or TIN changes for the account, for example, if the grantor of a grantor trust dies.

Penalties

Failure to furnish TIN. If you fail to furnish your correct TIN to a requester, you are subject to a penalty of $50 for each such failure unless your failure is due to reasonable cause and not to willful neglect.

Civil penalty for false information with respect to withholding. If you make a false statement with no reasonable basis that results in no backup withholding, you are subject to a $500 penalty.

Criminal penalty for falsifying information. Willfully falsifying certifications or affirmations may subject you to criminal penalties including fines and/or imprisonment.

Misuse of TINs. If the requester discloses or uses TINs in violation of federal law, the requester may be subject to civil and criminal penalties.

Specific Instructions

Name

If you are an individual, you must generally enter the name shown on your income tax return. However, if you have changed your last name, for instance, due to marriage without informing the Social Security Administration of the name change, enter your first name, the last name shown on your social security card, and your new last name.

If the account is in joint names, list first, and then circle, the name of the person or entity whose number you entered in Part I of the form.

Sole proprietor. Enter your individual name as shown on your income tax return on the "Name" line. You may enter your business, trade, or "doing business as (DBA)" name on the "Business name/disregarded entity name" line.

Partnership, C Corporation, or S Corporation. Enter the entity's name on the "Name" line and any business, trade, or "doing business as (DBA) name" on the "Business name/disregarded entity name" line.

Disregarded entity. Enter the owner's name on the "Name" line. The name of the entity entered on the "Name" line should never be a disregarded entity. The name on the "Name" line must be the name shown on the income tax return on which the income will be reported. For example, if a foreign LLC that is treated as a disregarded entity for U.S. federal tax purposes has a domestic owner, the domestic owner's name is required to be provided on the "Name" line. If the direct owner of the entity is also a disregarded entity, enter the first owner that is not disregarded for federal tax purposes. Enter the disregarded entity's name on the "Business name/disregarded entity name" line. If the owner of the disregarded entity is a foreign person, you must complete an appropriate Form W-8.

Note. Check the appropriate box for the federal tax classification of the person whose name is entered on the "Name" line (Individual/sole proprietor, Partnership, C Corporation, S Corporation, Trust/estate).

Limited Liability Company (LLC). If the person identified on the "Name" line is an LLC, check the "Limited liability company" box only and enter the appropriate code for the tax classification in the space provided. If you are an LLC that is treated as a partnership for federal tax purposes, enter "P" for partnership. If you are an LLC that has filed a Form 8832 or a Form 2553 to be taxed as a corporation, enter "C" for C corporation or "S" for S corporation. If you are an LLC that is disregarded as an entity separate from its owner under Regulation section 301.7701-3 (except for employment and excise tax), do not check the LLC box unless the owner of the LLC (required to be identified on the "Name" line) is another LLC that is not disregarded for federal tax purposes. If the LLC is disregarded as an entity separate from its owner, enter the appropriate tax classification of the owner identified on the "Name" line.

Other entities. Enter your business name as shown on required federal tax documents on the "Name" line. This name should match the name shown on the charter or other legal document creating the entity. You may enter any business, trade, or DBA name on the "Business name/ disregarded entity name" line.

Exempt Payee

If you are exempt from backup withholding, enter your name as described above and check the appropriate box for your status, then check the "Exempt payee" box in the line following the "Business name/ disregarded entity name," sign and date the form.

Generally, individuals (including sole proprietors) are not exempt from backup withholding. Corporations are exempt from backup withholding for certain payments, such as interest and dividends.

Note. If you are exempt from backup withholding, you should still complete this form to avoid possible erroneous backup withholding.

The following payees are exempt from backup withholding:

1. An organization exempt from tax under section 501(a), any IRA, or a custodial account under section 403(b)(7) if the account satisfies the requirements of section 401(f)(2),

2. The United States or any of its agencies or instrumentalities,

3. A state, the District of Columbia, a possession of the United States, or any of their political subdivisions or instrumentalities,

4. A foreign government or any of its political subdivisions, agencies, or instrumentalities, or

5. An international organization or any of its agencies or instrumentalities.

Other payees that may be exempt from backup withholding include:

6. A corporation,

7. A foreign central bank of issue,

8. A dealer in securities or commodities required to register in the United States, the District of Columbia, or a possession of the United States,

9. A futures commission merchant registered with the Commodity Futures Trading Commission,

10. A real estate investment trust,

11. An entity registered at all times during the tax year under the Investment Company Act of 1940,

12. A common trust fund operated by a bank under section 584(a),

13. A financial institution,

14. A middleman known in the investment community as a nominee or custodian, or

15. A trust exempt from tax under section 664 or described in section 4947.

The following chart shows types of payments that may be exempt from backup withholding. The chart applies to the exempt payees listed above, 1 through 15.

IF the payment is for . . .	THEN the payment is exempt for . . .
Interest and dividend payments	All exempt payees except for 9
Broker transactions	Exempt payees 1 through 5 and 7 through 13. Also, C corporations.
Barter exchange transactions and patronage dividends	Exempt payees 1 through 5
Payments over $600 required to be reported and direct sales over $5,000 [1]	Generally, exempt payees 1 through 7 [2]

[1] See Form 1099-MISC, Miscellaneous Income, and its instructions.

[2] However, the following payments made to a corporation and reportable on Form 1099-MISC are not exempt from backup withholding: medical and health care payments, attorneys' fees, gross proceeds paid to an attorney, and payments for services paid by a federal executive agency.

Part I. Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. If you are a resident alien and you do not have and are not eligible to get an SSN, your TIN is your IRS individual taxpayer identification number (ITIN). Enter it in the social security number box. If you do not have an ITIN, see *How to get a TIN* below.

If you are a sole proprietor and you have an EIN, you may enter either your SSN or EIN. However, the IRS prefers that you use your SSN.

If you are a single-member LLC that is disregarded as an entity separate from its owner (see *Limited Liability Company (LLC)* on page 2), enter the owner's SSN (or EIN, if the owner has one). Do not enter the disregarded entity's EIN. If the LLC is classified as a corporation or partnership, enter the entity's EIN.

Note. See the chart on page 4 for further clarification of name and TIN combinations.

How to get a TIN. If you do not have a TIN, apply for one immediately. To apply for an SSN, get Form SS-5, Application for a Social Security Card, from your local Social Security Administration office or get this form online at *www.ssa.gov*. You may also get this form by calling 1-800-772-1213. Use Form W-7, Application for IRS Individual Taxpayer Identification Number, to apply for an ITIN, or Form SS-4, Application for Employer Identification Number, to apply for an EIN. You can apply for an EIN online by accessing the IRS website at *www.irs.gov/businesses* and clicking on Employer Identification Number (EIN) under Starting a Business. You can get Forms W-7 and SS-4 from the IRS by visiting IRS.gov or by calling 1-800-TAX-FORM (1-800-829-3676).

If you are asked to complete Form W-9 but do not have a TIN, write "Applied For" in the space for the TIN, sign and date the form, and give it to the requester. For interest and dividend payments, and certain payments made with respect to readily tradable instruments, generally you will have 60 days to get a TIN and give it to the requester before you are subject to backup withholding on payments. The 60-day rule does not apply to other types of payments. You will be subject to backup withholding on all such payments until you provide your TIN to the requester.

Note. Entering "Applied For" means that you have already applied for a TIN or that you intend to apply for one soon.

Caution: *A disregarded domestic entity that has a foreign owner must use the appropriate Form W-8.*

Part II. Certification

To establish to the withholding agent that you are a U.S. person, or resident alien, sign Form W-9. You may be requested to sign by the withholding agent even if item 1, below, and items 4 and 5 on page 4 indicate otherwise.

For a joint account, only the person whose TIN is shown in Part I should sign (when required). In the case of a disregarded entity, the person identified on the "Name" line must sign. Exempt payees, see *Exempt Payee* on page 3.

Signature requirements. Complete the certification as indicated in items 1 through 3, below, and items 4 and 5 on page 4.

1. Interest, dividend, and barter exchange accounts opened before 1984 and broker accounts considered active during 1983. You must give your correct TIN, but you do not have to sign the certification.

2. Interest, dividend, broker, and barter exchange accounts opened after 1983 and broker accounts considered inactive during 1983. You must sign the certification or backup withholding will apply. If you are subject to backup withholding and you are merely providing your correct TIN to the requester, you must cross out item 2 in the certification before signing the form.

3. Real estate transactions. You must sign the certification. You may cross out item 2 of the certification.

4. Other payments. You must give your correct TIN, but you do not have to sign the certification unless you have been notified that you have previously given an incorrect TIN. "Other payments" include payments made in the course of the requester's trade or business for rents, royalties, goods (other than bills for merchandise), medical and health care services (including payments to corporations), payments to a nonemployee for services, payments to certain fishing boat crew members and fishermen, and gross proceeds paid to attorneys (including payments to corporations).

5. Mortgage interest paid by you, acquisition or abandonment of secured property, cancellation of debt, qualified tuition program payments (under section 529), IRA, Coverdell ESA, Archer MSA or HSA contributions or distributions, and pension distributions. You must give your correct TIN, but you do not have to sign the certification.

Secure Your Tax Records from Identity Theft

Identity theft occurs when someone uses your personal information such as your name, social security number (SSN), or other identifying information, without your permission, to commit fraud or other crimes. An identity thief may use your SSN to get a job or may file a tax return using your SSN to receive a refund.

To reduce your risk:

- Protect your SSN,
- Ensure your employer is protecting your SSN, and
- Be careful when choosing a tax preparer.

If your tax records are affected by identity theft and you receive a notice from the IRS, respond right away to the name and phone number printed on the IRS notice or letter.

If your tax records are not currently affected by identity theft but you think you are at risk due to a lost or stolen purse or wallet, questionable credit card activity or credit report, contact the IRS Identity Theft Hotline at 1-800-908-4490 or submit Form 14039.

For more information, see Publication 4535, Identity Theft Prevention and Victim Assistance.

Victims of identity theft who are experiencing economic harm or a system problem, or are seeking help in resolving tax problems that have not been resolved through normal channels, may be eligible for Taxpayer Advocate Service (TAS) assistance. You can reach TAS by calling the TAS toll-free case intake line at 1-877-777-4778 or TTY/TDD 1-800-829-4059.

Protect yourself from suspicious emails or phishing schemes. Phishing is the creation and use of email and websites designed to mimic legitimate business emails and websites. The most common act is sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft.

The IRS does not initiate contacts with taxpayers via emails. Also, the IRS does not request personal detailed information through email or ask taxpayers for the PIN numbers, passwords, or similar secret access information for their credit card, bank, or other financial accounts.

If you receive an unsolicited email claiming to be from the IRS, forward this message to *phishing@irs.gov*. You may also report misuse of the IRS name, logo, or other IRS property to the Treasury Inspector General for Tax Administration at 1-800-366-4484. You can forward suspicious emails to the Federal Trade Commission at: *spam@uce.gov* or contact them at *www.ftc.gov/idtheft* or 1-877-IDTHEFT (1-877-438-4338).

Visit IRS.gov to learn more about identity theft and how to reduce your risk.

Privacy Act Notice

Section 6109 of the Internal Revenue Code requires you to provide your correct TIN to persons (including federal agencies) who are required to file information returns with the IRS to report interest, dividends, or certain other income paid to you; mortgage interest you paid; the acquisition or abandonment of secured property; the cancellation of debt; or contributions you made to an IRA, Archer MSA, or HSA. The person collecting this form uses the information on the form to file information returns with the IRS, reporting the above information. Routine uses of this information include giving it to the Department of Justice for civil and criminal litigation and to cities, states, the District of Columbia, and U.S. possessions for use in administering their laws. The information also may be disclosed to other countries under a treaty, to federal and state agencies to enforce civil and criminal laws, or to federal law enforcement and intelligence agencies to combat terrorism. You must provide your TIN whether or not you are required to file a tax return. Under section 3406, payers must generally withhold a percentage of taxable interest, dividend, and certain other payments to a payee who does not give a TIN to the payer. Certain penalties may also apply for providing false or fraudulent information.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

Case: *Paul Dulberg v. David Gagnon, Caroline McGuire and Bill McGuire*
(McHenry County Case No. 12 LA 178)

Issued For Settlement Purposes Only

Dear Mr. Mast:.

I am writing to confirm our telephone conversation earlier this morning, wherein I advised you that I was authorized to propose settlement of Mr. Dulberg's claim against Carolyn and Bill McGuire for a lump-sum total of $5,000.00. The settlement would of course be contingent upon customary settlement documents, including a release, a good faith settlement finding and dismissal.

Pursuant to your request, I searched my file materials for lien notices. The only notice of lien contained in my file at this time is your Attorney's Lien (enclosed). I have asked my contact at Auto-Owners Insurance Company to confirm no lien notices have arrived on his end since Mr. Dulberg's case was assigned to me for the defense of Mr. and Mrs. McGuire. I do not anticipating any lien notices, but just wanted to be safe.

I understand that you intend to run my settlement proposal by Mr. Dulberg. I look forward to hearing from you once you have had a chance to confer with him.

Very truly yours,

RONALD A. BARCH

RE: ***Paul Dulberg vs. David Gagnon, Caroline McGuire and Bill McGuire***
McHenry County Case: 12 LA 178

Dear Paul:

Please be advised that I just completed the deposition of David Gagnon. David Gagnon is a very interesting character. He testified pretty much as expected. He testified that during the branch cutting you had chosen to hold the branch out in front of you with your left arm and with your right arm down by your side. He said that when he went to cut a limb off the branch you unexpectedly reached over with your right arm and grabbed onto the branch below the cutting point. He did not expect you to do this and therefore, as he cut the branch he also "nipped" your arm. He doesn't believe that he did anything wrong in attempting to cut the branch.

Obviously, this case is going to come down to your word against David's word. With your testimony, it seemed very clear that David was negligent in operating the chainsaw to cause it to strike your right forearm. Unfortunately, David's version of the accident is much different. Given the conflict in the testimony, it is difficult to determine how a jury will ultimately decide liability in this case. If the jury decides for you, you will obviously win. However, if the jury finds for Mr. Gagnon, you will lose. One additional factor is that David testified that you stated after the fall "I may never have to work the rest of my life" and that you urged him to help by offering favorable testimony. If true, this could be problematic to the case.

We have the depositions of Mr. and Mrs. McGuire in a few weeks. I will keep you advised.

Very truly yours,

HANS A. MAST

RE: ***Paul Dulberg vs. David Gagnon, Caroline McGuire and Bill McGuire***
McHenry County Case: 12 LA 178

Dear Paul:

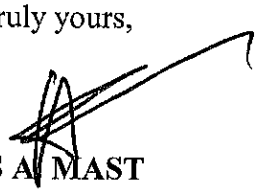
Just for purposes of an update, we did appear for the discovery deposition of Dr. Kujawa. She did a good job in describing your current limitations and issues with respect to the nerve damage you suffered from the chainsaw accident. She apparently saw you September 25, 2013. I understand that this was the only time she has seen you. You may want to continue to follow up with her.

As we discussed in the past, I do not feel that this is the sort of case that I want to try before a jury. I simply do not believe that we have strong enough evidence on the issue of liability to proceed to trial. I am happy to try to try to work to settle the case. Unfortunately, defense counsel has not shown any interest in settling the case - because he too knows the evidence will be challenging for us.



You have two options at this point. You can contact other attorneys in the area to see if they are willing to substitute in the case and proceed as your attorney to trial on the matter. To assist you in retaining other counsel, I am happy to discuss a release of our attorney's lien, but maintain a right to recover any costs that we have paid thus far. By "releasing" our lien, that would mean that we have been representing for no charge up to this point which should prove a great savings to you if and when the case is resolved or settled in the future.

Your second option is to just allow us to continue on in representing you on the claim and continue to pursue potential settlement. If the case, however, cannot be settled, we would not go to trial but instead we would dismiss the case with leave to refile it within one year to give you some additional time to retain other counsel.

However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

HEALTH CARE PROVIDER'S LIEN

Patient: Paul Dulberg

I have a cause of action as a result of injuries sustained by me on _____.

I desire your services as a treating therapy facility, even though I do not have the funds to personally pay for therapy services at this time.

I understand that I am directly and fully responsible to pay you for all the reasonable and necessary medical bills incurred by me for the rendering of reasonable and necessary services provided by you. This agreement is made in consideration of your continued treatment of me, awaiting payment and foregoing collection efforts.

I give a lien to you on any settlement or jury verdict that I receive as a result of my cause of action. I authorize and direct my attorney to pay directly to you such sum as may be due for services rendered to me, and to withhold such sum from my portion of any settlement or jury verdict. In the event my portion of the recovery is insufficient to cover all of the protected medical bills in my case, then I will promptly reimburse you from my portion of the recovery on an accepted basis with all of my other protected medical bills. I further understand, however, that such pro-rata payment will not be considered payment in full by me, and that I remain fully responsible to pay the balance of my medical bill, and that any personal liability is not contingent on the settlement or jury verdict which I may recover.

Patient's Signature: Paul Dulberg Date: 12-6-11

As the patient's attorney, I acknowledge the above lien. Upon final settlement or jury verdict in this case, I agree to withhold your medical fees from the client's share of any settlement or jury verdict, and forward full payment to you.

It is expressly understood that in the event the attorney-client relationship is terminated prior to resolution of the above referenced client's case, I will immediately notify you, and I will continue to use my best efforts to ensure that your fees will be protected. I will immediately notify the appropriate insurance companies and any new attorney that the case cannot be concluded without paying your fees in accordance with this lien agreement.

that he had no contraband or U.S.C. on his person, this occurring @ approx 2020 hours this date. A specific amount of U.S.C. was then turned over to the C.I. (with officer Cundiff) for the purpose of purchasing CANNABIS from the suspect offender(s) located at 1016 W.Elder, McHenry. R/O at this time lost eye contact with the C.I.: but officer Cundiff was with the C.I. at all times, including the drive to and back from the suspect(s) residence.

At approx 2125 hours this date, R/O met the C.I. & officers Cundiff accross from Johnsburg High School where the suspect CANNABIS was recovered and secured by R/O. The C.I. paid $125.00 for forty (40) grams of CANNABIS packaged in a clear plastic bag. It should be noted that initially the C.I. stated that he bought the CANNABIS from Dave Gagnon but subsequently related that he in fact bought it from Dave's mom, referring to Carolyn Gagnon. When asked why he did not tell the truth initially, he stated that he likes Mrs Gagnon and she trusts him but he knew that he would have to tell the truth about the person who sold it.

Officer Cundiff related that he and the C.I. arrived at 1016 W.Elder at approx 2045 hours this date where the C.I. entered but returned moments later. 05-30-86 @ 1905 hrs. R/O arrived at 1016 W. Elder, McHenry, pursuant to a search warrant.

05-30-86 @ 1913 hrs. R/O and Det. Hay interviewed Donna J. Gagnon, age 15, in David Gagnon's room at 1016 W. Elder, McHenry. R/O read Donna her rights under Miranda and she stated that she understood and would talk with us. Donna said that she did not know anything about what was going on in the house and that she was not directly involved with anything to do with narcotics or marijuana and she assumed that her brother David was the only one with any knowledge of that. She said that those types of things were hidden from her and she assumed that was because he might be afraid that she would use them if she knew where they were. Donna said that she is going to go to work with her 20 year old sister, Diane Gagnon, at the Bucket Brigade, McHenry, part-time doing cleaning, etc., this summer.

At 1935 hrs. Donna was searched in the bathroom of the residence prior to her using the facilities. She was returned to another part of the house pending disposition and at 2145 hrs. she was released with her mother's permission into Diane Gagnon's custody and left the house. Prior to her leaving the house, R/O checked her purse and found a clear plastic bag containing green leafy plant material, a small pipe, and a driver's license belonging to Wendy L. Carter, DOB 11-30-63. She said that the things were hers but refused to say where she got them and that the driver's license was found. She

then left the house with Diane Gagnon. The contraband was taken into custody.

05-30-86 @ 1940 hrs. R/O and Det. Hay interviewed Carolyn J. Gagnon in David Gagnon's room at 1016 Elder, McHenry. R/O read Carolyn her rights under Miranda and she stated that she understood and would talk with us. Carolyn said that she is employed at Baxter-Travenol in Round Lake and has been employed there for about 8 years and earns eight dollars and something an hour working as a technician.

She said that they have had marijuana in the house on and off and that her son, David, is the one who mostly sells it. She said that she and her ex-husband, Alan, have also sold it on occasion but she was mainly selling it to people that had been at the house before and thought she was doing her son, David, a favor when he wasn't home. She said that Alan has been living out of state for quite a while since they have been divorced and that Alan and David went somewhere the other night and got some marijuana and brought it back to the house. When there is marijuana in the house, it is mainly kept in the basement near the work bench. She stated that as far as she knows, there has never been anything but marijuana in the house and has never been any narcotics of any other type. Carolyn said that Alan has sold some marijuana, also, but that none of the three ever went out selling it and that people came to them.

At 2010 hrs. R/O searched Carolyn and she then wrote out a brief statement.

05-30-86 @ 2045 hrs. R/O and Det. Hay interviewed Alan A. Gagnon in David Gagnon's room at 1016 Elder, McHenry. R/O read him his rights under Miranda and he stated that he understood and would talk with us. Alan said that he is unemployed at the present time and is an engineer. Alan said that there has not been anything in the Gagnon house but marijuana and that he has been out of state for a while and since he's been back in the last month or two, he has been trying to get David to quit having anything to do with selling marijuana because of the likely consequences. He took David on a trip to California recently and he believes that he has David convinced to get

out of the business of dealing with marijuana. Alan said that he had rarely sold anyone marijuana but that he had on occasion done so but had not gone out on the street to sell it to anyone and that people had come to the house. He said that he knew that Carolyn had also done so in the past but that it was mainly David who sold the marijuana. He also said that he used marijuana sometimes. Alan said that the marijuana that was most recently purchased was bought by David and brought into the house the night before last.

Alan said that the charge on the criminal complaint was not true and that he had not sold anything to anyone on May 29, 1986. Alan said that he wanted to talk to someone to get out of jail tonight and that if allowed to do so, he could do something with a supplier from Rockford. Alan said that the marijuana he had in his pocket earlier in the evening was for his personal use and not intended to sell.

He said that he told David that something like this would happen if he didn't quit and he said that the marijuana David had now was going to be the last. Alan said the only stuff in the house was in David's closet and Det. Hay looked and saw a brown paper bag containing several clear plastic bags with green leafy material and some U.S.C. and Alan said that was all that was in the house.

05-30-86 @ 2120 hrs. R/O and Det. Hay interviewed Diane Gagnon in David Gagnon's room at 1016 Elder, McHenry. R/O had earlier searched Diane after she had been found on the street in possession of contraband. R/O read Diane her rights under Miranda and she stated that she understood and would talk with us. Diane said that she did not have anything to do with any of the marijuana in the house and did not use or sell any of it. She said that her mother, father, and brother David were the ones who handled it. Diane also said that she thought the last time there was any marijuana in the house was about a month ago.

Duplicate 000360

Diane said that people who purchase marijuana from her brother are Joe Choyinski, Peter Dubin, Dante Garcia, Tim Kinsland, and Glenn Sabaj. Diane and Donna Gagnon left the residence at 2145 hrs.

05-30-86 @ 2150 hrs. R/O and Det. Hay interviewed David Gagnon in his room at 1016 Elder, McHenry. R/O read David his rights under Miranda and he stated that he understood and would talk with us. David said that he attends the College of Lake County and works at the Lakeland Auto Body shop in Volo, earning five or six dollars an hour. He works on weekends and works about 20 hours a week. He also is supposed to be graduating from high school this year.

David said that he has been selling marijuana since he was about 17 years old and that he only dealt in marijuana and nothing else. He said that a guy was at his house earlier tonight and he sold him ½oz. of marijuana and he doesn't know the guy's name but he drives a Monza with no hood. David said that his mother, Carolyn Gagnon, has sold marijuana a few times and he told her not to do it and he thinks that she hasn't done it in about six months. At 2210 hrs. David reached into his headboard of his bed and brought out a plastic bag containing green leafy plant material. David said that he would like to talk with somebody about helping with information that would help himself and his mother.

05-30-86 @ 2230 hrs. R/O and Det. Hay talked with Martin W. Siddons, Jr., in R/O's squad car parked outside of the Gagnon residence at 1016 Elder, McHenry. R/O read Martin his rights under Miranda and he stated that he understood and would talk with us. Martin said that he is a friend of Diane Gagnon and that he has heard that Joe Choyinski, John Flura (sp.?) and Peter Dubin buy marijuana from David Gagnon. He had earlier been brought to the Gagnon residence by Diane and at 2240 hrs. he walked home.

05-30-86 @ 2250 hrs. R/O and Det. Hay talked with Joseph H. Choyinski in David Gagnon's room at

On May 30, 1986 @ approximately 1915 hours, while executing a search warrant at the Gagnon residence, 1016 Elder, McHenry, I was requested by Under Sheriff Hendle to interview a subject later identified as Jeffery A. Callahan (M/W, DOB 08-10-69). I was advised by Under Sheriff Hendle that this subject had come to the residence looking for a subject taken into custody David A. Gagnon.

I then took Callahan to a bedroom located at the northwest corner of the home and interviewed him. Prior to the interview, I conducted a pat down search of Callahan and located a silver colored pipe containing a small amount of residue in Callahan's right front jean pocket. I removed the pipe from the pocket then questioned Callahan as to the reason he was at the Gagnon residence. Callahan stated that he had come to the residence to visit David Gagnon as they had been friends for a long time. It was also learned that Callahan has purchased small quantities of marijuana from Gagnon in the past. Callahan stated that approximately one month ago he purchased one gram of marijuana from Gagnon for an unknown amount of money. I advised Callahan that I would be seizing the pipe found in his pocket and entering it in evidence. Callahan was then released.

At approximately 2027 hours, Detective Lockhart requested I assist him with a black over gold older model Chevrolet Nova (IL 86 RYJ 758) which he had stopped on the roadway approximately two houses east of the Gagnon residence. Detective Lockhart advised me that he had questioned these

subjects, then searched their vehicle obtaining several items which could be used for "snorting" cocaine. Upon arrival, I was advised by Detective Lockhart that he had located a mirror, partially smoked hand rolled cigarette, a "Stanley knife" knife blade, a piece of white rolled plastic, a wire clip and a package of Zig Zag Kutcorners rolling papers. These items were sitting on top of the right side of the roof of the vehicle. I then questioned the driver of the vehicle, a David K. Hopp (M/W, DOB 09-11-69) and learned the following: On the evening of May 29, another subject in the vehicle a Rob Ridge had purchased a quarter gram of cocaine from the Wright residence on Coolidge Drive, McHenry for $25.00. Prior to being stopped, Hopp, his cousin Michael S. Hopp (M/W, DOB 05-22-69) and Rich had taken the cocaine to a beach somewhere along the river in the Sunnyside area and snorted the cocaine. Through further questioning, it was learned that at the time of the stop, they were enroute to the Gagnon residence to purchase marijuana. I then requested and Hopp agreed to make a written statement reference the incident. Copy of statement attached to this supplement.

At approximately 2050 hours, I interviewed Michael S. Hopp (M/W, DOB 05-22-69) reference the incident. It was learned that Michael Hopp was a passenger in the vehicle and Hopp agreed to make a statement reference the incident. Hopp stated that he has been dealing with David Gagnon but not fo. the past four or five months. He stated that on May 29, he bought a quarter gram of cocaine from Gagnon and that the week before on what he believed to be Thursday, May 22, he bought a gram of marijuana from Gagnon. Hopp stated that he has purchased marijuana from Gagnon on nine or ten occasions and that they were enroute to Gagnon's residence to purchase marijuana when they were stopped by Detective Lockhart. Michael Hopp stated that he has purchased marijuana from Gagnon in his bedroom where Gagnon normally keeps it in his roll top desk and another time it was sold to him by David Gagnon in the kitchen of the home. Michael Hopp also agreed to make a written statement reference the incident which was completed at 2058 hours. Copy of statement attached to this report.

The paraphernalia located by Detective Lockhart within David Hopp's vehicle was seized

FEE AGREEMENT

I, Paul Dulberg, hereby agree to retain and employ BAUDIN & BAUDIN, an association of attorneys, to prosecute and/or settle all suits and claims for damages, which may include personal injuries and property damage, against responsible parties, including their insurance companies and my insurance companies, or any other responsible insurance companies, arising out of events which occurred on or about the 28th day of June, 2011, at or near 1016 W. Elder Avenue, McHenry, Illinois.

I agree to pay BAUDIN & BAUDIN as compensation for services (1) a non-refundable retainer fee of $3,333.33; AND (2) a sum of money equal to one-third (1/3) of the gross amount realized from this claim by settlement prior to trial of this matter, OR, if this matter proceeds to trial, which is defined as any time after the final pre-trial conference with the Court has concluded, I agree to pay BAUDIN & BAUDIN as compensation for its services a sum of money equal to forty percent (40%) of the gross amount realized from such action. Should this matter conclude by way of settlement, negotiations, trial, arbitration or judgment in my favor, BAUDIN & BAUDIN agrees to reduce its percentage fee by an amount of $3,333.33 as an offset for the non-refundable retainer fee; however, in no event will the $3,333.33 be refunded to me once this agreement has been executed.

I realize, understand and agree that all expenses and costs related to my claim, such as medical expenses for my/our care and treatment and related costs such as costs for obtaining medical records and bills, as well as court costs, including filing fees, costs of depositions, costs of experts, etc. are my obligation and responsibility and shall be paid as those bills become due from time to time.

It is further agreed and understood that there will be no further charges for legal services over and above the $3,333.33 non-refundable retainer fee by BAUDIN & BAUDIN (with the exception of the aforesaid expenses and costs referred to in paragraph 3) unless recovery is made in this claim, and that no settlement will be made without the consent of the claimant(s).

I hereby authorize and direct that BAUDIN & BAUDIN is authorized to endorse and deposit any proceeds received in regard to the aforesaid claim herein, and to disburse those funds for purposes of client payments, resolution of liens, reimbursement of costs advanced, and attorney's fees.

This cause was not solicited either directly or indirectly from me/us by anyone. This agreement is being executed with duplicate originals.

Dr. Craig Phillips is a board-certified orthopaedic surgeon with a subspecialty certification in hand and upper extremity surgery, who specializes in treating the hand, wrist, elbow and shoulder. His practice focuses on all conditions affecting the arms with common conditions such as hand and wrist fractures, wrist arthritis, nerve problems such as carpal tunnel syndrome, rotator cuff tears, shoulder arthritis and shoulder replacements.

Dr. Philips offers all current treatments but prefers minimally invasive surgery such as the use of the medication Xiaflex for treatment of Dupuytren's disease.

Dr. Phillips takes a conservative approach that utilizes surgery as a last resort only after options such as braces and injections have been exhausted. In each case, he seeks to provide empathetic care and educate patients so they can take an active role in their treatment. His goal for his patients is to return them to their normal lifestyle in the most rapid time period possible while providing the least disruptive treatment.

Dr. Phillips has designed widely used implants for treating fractures including plates and screws for the wrist and elbow He keeps informed of the latest developments in his field through his work as associate editor of the *Journal of Hand Surgery* and director of the combined hand surgery fellowship program at The University of Chicago Pritzker School of Medicine.

Re: Your File: Paul Dulberg v. David Gagnon, et al
My File: Bankruptcy Estate of Paul Dulberg; Case No. 14-82297

Dear Attorney Mast:

Thank you for the information you sent on January 23rd. At this point in time, I am unable to determine if my bankruptcy case may be an asset case. (If it might be an asset case, my Estate needs to retain you to continue the pending pi case -- assuming you can be and want to be retained.)

I received from you a list of medical bills (which bills total over $58,000.) In addition, I just received from Debtor's counsel a copy of a letter from US Phy, by which this creditor claims a medical lien.

Can you please advise:

1) What is the total amount of medical liens filed against the pending pi case? (I received a copy of a document, listing medical bills totaling $58,387.33, but I don't know if any of these bills are unpaid and, if so, if the unpaid providers timely filed a medical lien).

2) As to the medical lien apparently claimed by US Phy (via its letter of January 8, 2015 - a copy of which is attached for your ready reference) is this letter the first lien claim it made against the personal injury cause of action? If so, based upon the little research I've done, to date, I don't think this letter is sufficient to claim a lien -- post-bankruptcy filing -- on Debtor's right to recover in his pi case. (It may be that I need to file

something in the bankruptcy case to cause this lien to be removed. Investigation continues.)

3) Once I know the above facts, I will need to know the potential range of recovery, and, assuming the potential recovery is large enough, if you want to be retained by the Bankruptcy Estate to continue to represent the Debtor/Estate in the pending personal injury cause of action.

I look forward to hearing from you again soon.

Very truly yours,

Dear Mr. Accardo:

I was asked to perform an independent medical evaluation on Mr. Dulberg on October 4, 2016. This examination took place in my office in Glenview, Illinois.

As part of this independent medical evaluation, Mr. Dulberg's identifying documentation was obtained, xeroxed, and placed into the medical records. The information from these documents appeared to corroborate with his appropriate information.

I explained to Mr. Dulberg, with his mother Barbara as well as his attorney Randy present, the purpose of the independent medical evaluation as well as the fact that no patient-physician relationship was established with him during today's visit. Additionally, I explained to them that no treatment, outcomes or diagnoses would be discussed with him during this evaluation.

All opinions expressed in this report are made to a reasonable degree of medical and surgical certainty as a board certified orthopedic surgeon with a certificate of added qualification in hand and upper extremity surgery.

I spent 65 minutes with Mr. Dulberg in face-to-face time today obtaining a history and performing a physical examination.

HISTORY: Fiction - DR's Imagination

Mr. Dulberg is a 46-year-old right-hand dominant gentleman who previously worked in graphic design who is here for evaluation of his right upper extremity. He states that he had no symptoms referable to his right upper extremity prior to an injury that occurred in June 2011. He states he is not sure of the exact date, but on the date in question he was holding a tree branch at his neighbor's house to help David, his neighbor's son, cut the tree branch with a chainsaw. He stated he was holding a pine tree branch, which was a few inches thick, still attached to the tree and while David was cutting the branch, he inadvertently cut Mr. Dulberg's right forearm. Mr. Dulberg went to NIMC ER where the wound was irrigated and sutured. He had radiographs there which showed no fractures. He followed-up with his primary care physician, Dr. Sek, who removed the sutures two weeks later. Mr. Dulberg noticed

[redacted]

significant pain in his forearm after the injury. Due to persistent symptoms, Dr. Sek referred him to see Dr. Levin, who Mr. Dulberg states is a neurologist, who performed a nerve conduction study and Mr. Dulberg was told the study was normal he had no nerve injury, but was told that the superficial branches of the nerves were severed. Due to ongoing significant pain, he was referred to a hand specialist. He initially saw a hand specialist, although he is not sure of the name but per the medical records that I reviewed was Dr. Talerico, who referred him for occupational therapy. He states that he performed occupational therapy for multiple months which provided him with no benefit. He states that he was still having significant problems with his right forearm and hand and so he returned to see Dr. Levin. Dr. Levin referred him for a second opinion to see Dr. Sagerman in 2012, although he is not sure of the date. Dr. Sagerman prescribed more occupational therapy, which he states was "somewhat helpful". Dr. Sagerman also repeated the nerve studies as he stated the initial nerve study was not complete. Mr. Dulberg does not remember the date of the repeat nerve studies. Subsequently, he followed-up with. Sagerman but is not sure of the results of this nerve study, but thereafter Dr. Sagerman suggested exploring the nerve. He wanted to think about this and returned a month later after discussing this with Dr. Sek and elected to undergo surgery. He underwent surgery by Dr. Sagerman in June or July 2012 whereby he states he underwent a cubital tunnel release, and was told that the "nerve was okay." He also underwent exploration of the ulnar nerve in the forearm and tells me that Dr. Sagerman told him "this was the most scarred tissue, I have ever seen." (This is interesting as the MRI was normal and the operative report states that no scar was noted around the nerve and the muscle belly that covers the nerve was pristine only with sutures in the fascia covering the muscle). He was then enrolled in more occupational therapy, which he did for another two months. He states that this helped his forearm temporarily. He followed up with Dr. Sagerman and ultimately plateaued. His complaint at that point as well as prior to the surgery was numbness and tingling in his fourth and fifth finger as well as pain and spasms in his left forearm. Due to a plateau in his improvement after surgery, Dr. Sagerman referred him to Dr. Kujawa. Mr. Dulberg states that he was referred for "cramping" and "spasms of the muscles in the forearm." Dr. Kujawa has treated him from after this surgery until the present time. Mr. Dulberg states that Dr. Kujawa tied injecting Botox in the muscles of the forearm twice. The first time he states it provided him with no benefit and the second time he states that the muscles in his forearm got significantly weaker, which he states Dr. Kujawa confirmed that the Botox was in the correct area; however, besides having temporary weakness in the arm, did not change the cramps and spasms that he was complaining of at that time. He states that both Botox injections were performed within a year of his surgery. He has continued to follow up with Dr. Kujawa who started him on Gabapentin. He states that the Gabapentin has helped the smaller and minor cramps, spasms and pain in his forearm; however, the larger and more significant cramps and spasms in the forearm have not been affected by the Gabapentin. He sees Dr. Kujawa every six months. He did follow up to see Dr. Sagerman for left lateral epicondylitis in 2012, who performed a cortisone injection into the elbow, which cured this problem. Of note, Mr. Dulberg had previously seen Dr. Sagerman in early 2000 for "pain in the left elbow" as well as "numbness and tingling in the fingers." He underwent a cubital tunnel release on the left at that time, which helped tremendously. He currently has no similar symptoms in the left upper extremity.

I asked Mr. Dulberg about a motor vehicle accident in early 2000 in which he was involved. He states he sustained a whiplash injury and he hit his left elbow against the inside of the car and developed pain in the left elbow and numbness in the fingers. He was diagnosed with left cubital tunnel syndrome. He had nerve studies and a year later underwent a cubital tunnel release. He was also diagnosed with degenerative disk disease in his cervical spine after the motor vehicle accident affecting him from C3 to C7. He takes occasional Naproxen for his neck, which he states helps somewhat. He is not sure whether the Naproxen really helps his right arm.

Mr. Dulberg states that he is currently able to drive, although he has to drive with his right hand at the 6 o'clock position as when he holds the steering wheel at the 10 or 12 o'clock position, he develops spasms in his forearm. He states any vibration causes spasming in his right forearm.

CURRENT COMPLAINTS WITH REGARDS TO THE RIGHT UPPER EXTREMITY:

I asked Mr. Dulberg to list all complaints referable to his right arm:

Mr. Dulberg's primary complaint is that he describes "cramps" in the forearm. He states the cramps happen at least 12 times a day. He states they frequently happen with no activities. He states the cramps last a few seconds to a few minutes. Thereafter, he notices that the fingers are weak and he frequently drops objects due to the cramps. He does not describe any finger spasms. He states that activities exacerbate the frequency and severity of the cramps "a lot." He occasionally wakes up with these symptoms at night, which he states is maybe once a week. He states the cramping is his biggest problem subsequent to the injury. He states the cramps began within six months of the injury. He states he had "a lot going on at that time" and he had to figure out what was causing his problem. When asked specifically, Mr. Dulberg states that the acute pain that he had in the forearm immediately after the injury is gone.

Mr. Dulberg's second complaint with regards to the right arm is that he has occasional tingling in the fifth finger. It bothers him once or twice a day and when he develops these symptoms they last for a few seconds. It does not wake him up at night.

He also describes burning in his palm, which comes and goes and is unpredictable, similar to the tingling in the small finger. When he develops the finger tingling, the palm begins to burn. The duration of the palmar symptoms are the same as the small finger tingling.

He rates his pain currently as 0/10, but states the cramps hurt, and rates the cramping as a 7-10/10. The pain from the cramps lasts a few seconds to a few minutes.

OCCUPATION HISTORY:

Mr. Dulberg states that he has worked as a graphic designer since he was 16 years old. Subsequent to his right forearm injury, he states that he was unable to work. He tried returning to graphic design 2 months after the injury, but states that he could not type because he would develop the forearm cramps. He states any activity whether it be typing or mousing for any period of time whether it be minutes or hours, would increase his symptoms. He has no symptoms when he drives as he has modified where he grasps the steering column.

HOBBIES:

Mr. Dulberg states that he previously would fish, drive motorcycles and ATVs, canoe, camp and bicycle. He states he cannot do any of these activities as his right forearm cramps. He tried bicycling after the surgery, but he could not hold onto the handlebars without cramping. His new hobby includes maintaining a home fish aquarium. He states he is able to change the water without difficulty but his friend Mike helps him with the maintenance.

PAST MEDICAL AND SURGICAL HISTORY:

Mr. Dulberg states that he has no medical problems. He states he has no history of diabetes or thyroid

disorder. He has no history of arthritis or inflammatory arthropathy; specifically, no history of rheumatoid arthritis, gout, pseudogout, psoriasis, or colitis. He has no history of fibromyalgia. He states that he was diagnosed with anxiety and depression a year after the accident, but takes no medication for this. He does not see a psychologist.

Mr. Dulberg's only medication is Gabapentin.

Mr. Dulberg's surgeries include the right forearm wound closure in the emergency room after his right forearm chainsaw injury as well as the subsequent cubital tunnel release and ulnar nerve exploration in the right forearm. He also had a left cubital tunnel release with anterior transposition of the nerve in early 2000s.

Mr. Dulberg denies drug allergies. He has never had a bone density study and he does not have sleep apnea.

SOCIAL HISTORY:
Mr. Dulberg smokes currently 10 cigarettes a day, but previously a pack a day, since he was 18 years old. He does not consume alcohol.

PHYSICAL EXAMINATION:
On examination today, Mr. Dulberg is noted to be 5 feet 8 inches tall, weighing 165 pounds. He is in no distress today and has normal affect. He is alert and oriented. He is afebrile. He demonstrates no suspicious pain behavioral characteristics.

With regards to his right upper extremity, he is able to remove his sweater, albeit mostly using his left arm. After the examination when he put his sweater on, he was able to pull out the sleeves using his right hand, manipulating the sweeter and sleeves using his right hand normally. He holds the hand in a normal position, although the small finger is in a constantly abducted position. On inspecting of his right forearm and hand, he does have a transverse laceration in the mid forearm measuring 6 cm. The incision is healed and is stable and supple. He also has a longitudinal incision, from his surgery, over the ulnar forearm, which measures 6 cm long. This incision is healed, stable, supple and asymptomatic. He also has an incision posterior to the medial epicondyle measuring 5.5 cm, which is healed, stable, supple and asymptomatic.

With regards to his right hand, as mentioned, he holds the small finger in an abducted position. I can passively adduct the finger to sit adjacent to the fourth finger, but he cannot actively maintain this position of the small finger. He flexes the thumb normally and extends it normally. He actively flexes the index, middle and ring finger to the palm, but with active composite flexion, he lacks about 3 cm of tip to palm distance of the small finger. His hand shakes when he flexes the fingers. Am able to passively flex his small finger to his palm, which he is then able to maintain in this position, which is concerning for symptom magnification as this implies subjective voluntary manipulation. He expresses that pain does not limit his inability to flex the small finger. After performing repetitive active and passive flexion and extension motions of all fingers, he was then able to flex his small finger to his palm with 5/5 strength with no pain. He extends all fingers to neutral with robust extensor tone in the MP, PIP, and DIP joints of all digits including the thumb. He has no evidence of flexor or extensor tenosynovitis of his fingers. He has no triggering or locking of the digits. He has no trophic changes. His hair and nail growth is normal in all digits. Subjectively, he states that he is numb in the small finger and half the ring finger to touch.

With regards to his right wrist, he extends his wrist normally to 60 degrees with 5/5 strength and flexes to 55 degrees with 5/5 strength, but complains of some forearm discomfort diffusely but not localized to any specific aspect of his forearm. His wrist motion parameters are symmetric. He has no pain with radial and ulnar deviation of the wrist. His passive forearm rotation is to 90 degrees of pronation and supination respectively without pain or crepitus and he actively pronates to 90 degrees with 5/5 strength without pain and actively supinates to 90 degrees with 5/5 strength with pain around the laceration over the mid medial forearm; again concerning for non-organic pathology as his supinator muscle is on the radial side (opposite to where he has pain) of his proximal forearm and he had no pain with passive pronation or supination. He has no intercarpal laxity on stress testing. He has no pain over the basilar joint of his thumb, with a negative grind and distraction test. He has a negative Finkelstein test. He has no instability of the first CMC joint. His ulna is stable and reduced. He has no ulnar-sided wrist pain. He is not tender over the radiocarpal or ulnocarpal joint.

With regards to his forearm, as mentioned, he has 2 incisions over the mid forearm, one transverse and one longitudinal as described above. The incisions are all healed and asymptomatic. He has no induration or tethering of the skin over the muscles at the site of the laceration or incision. His muscle bulk appears to be intact and appropriate. He is not tender to palpation around the muscles of the medial forearm. He is not tender to palpation over the tendons in the distal forearm or the muscles in the distal, middle, or proximal forearm ulnarly, or radially, volarly or dorsally. He is able to make a full fist, now recruiting all fingers, with good strength. His profundus tendons function normally to each finger when tested individually. His sublimis function, when tested independently, activate normally including to the small finger albeit with some discomfort in his forearm. He has no gross atrophy of the muscles in his forearm.

With regards to his elbow, he has 5.5cm incision posterior to the medial epicondyle, which is healed, stable, supple and asymptomatic. He has full elbow flexion and extension, which is symmetric and asymptomatic without crepitus. He has full forearm rotation as mentioned. He has no evidence of medial or lateral epicondylitis to palpation or with provocative testing. He has no instability of the elbow to varus or valgus stress at 30 and 60 degrees of flexion. He demonstrates no posterolateral rotatory insufficiency of the elbow to stress.

With regards to the peripheral nervous system of his right upper extremity, as mentioned, he states he has subjectively numbness in the small in ulnar half of the ring finger. His active motion was as mentioned limited in the small finger at times, but at times he had full active flexion of all fingers. With regards to the median nerve, he palmarly abducts his thumb with normal strength. Sensation was normal in the digits innervated by the median nerve. He has a negative Tinel over the carpal tunnel, and a negative wrist compression test. With regards to the ulnar nerve, he notes the aforementioned numbness. He has normal sensation over the dorsal radial and dorsal ulnar aspect of the wrist. He has normal sensation over the forearm radially and ulnarly. He was able to activate his first dorsal interosseous normally, and he abducts and adducts the fingers albeit with shaking of the hand and fingers and variable strength with abduction and adduction. At times he could abduct normally and at times he was extremely weak and this waxed and waned throughout the examination. He does hold the small finger in an abducted position, which can passively be placed back at the side of the ring finger, but then automatically assumes an abducted position. His extensor tendon functions normally and does not subluxate over the MP joint with active or passive flexion of the MP joint. He has no triggering in the small finger. He has a negative Tinel over the Guyon's canal. He has normal pulses. He has no splinter hemorrhages. He has no masses palpable around the ulnar artery at Guyon's

NIMC:

According to the medical records from Centegra Northern Illinois Medical Center, Mr. Dulberg was seen in the emergency room on June 28, 2011. According to the emergency room admission assessment he was seen stating that he had a chain saw injury to the right arm 15 minutes ago and he was feeling lightheaded. He is noted to smoke a pack a day. He is alert and oriented x3. He was accompanied by a coworker with the laceration by chainsaw to the right forearm. He had radiographs, which showed no bony abnormalities other than a soft tissue injury. The wound was irrigated and cleaned and sutured. He had 3 subcutaneous stitches placed of 4-0 Vicryl and 11 4-0 Prolene sutures placed in the skin. He was given discharge instructions for follow-up. He was discharged home.

According to the radiologist's report of radiographs performed of the right forearm dated June 28, 2011. The findings were dictated as two views of the right forearm, which demonstrated a deep laceration on the ventral aspect of the mid forearm, best visualized on the lateral view. No fractures or radiopaque foreign body is identified.

According to the Moraine emergency room physician records, Mr. Dulberg was seen on November 11, 2005 for right foot injury. He states he was fighting with home invaders at that time.

He was seen again on June 28, 2011 for the aforementioned chainsaw injury, which has previously been described above.

Dr. Talerico:

According to the medical records from MidAmerica Hand to Shoulder, Mr. Dulberg was seen by Dr. Talerico on December 2, 2011. His history is a 41-year-old male, right hand dominant, referred by Dr. Levin, MD, neurologist, for evaluation of an injury sustained to the right medial forearm in June 2011. He was using a chainsaw when he accidentally struck the volar medial aspect of his right forearm in roughly the mid forearm range with a chain saw. He had a large open wound down to muscle. He was seen in the emergency department where the wound and muscle were sewn together and the skin was closed. He followed up with his PCP and was noted to have persistent pain, which he describes as intermittent and shooting in character radiating from the laceration site. He occasionally has intermittent numbness and tingling in the ring and small finger. He reports grip weakness and no endurance with wrist flexion and gripping. He has not had therapy. He had nerve studies performed by Dr. Levin in August 2011, which per the patient, were normal. Did not have the study available. He is not working, but he is a graphic designer by training. He uses a computer mouse for 20 minutes causing significant forearm pain. He previously had an ulnar nerve transposition on the left side. He is single. Smokes everyday. He has a family history of diabetes. ROS negative. Examination showed him in no distress. Examination of the right upper extremity reveals his elbow has normal, painless range of motion. He has no focal tenderness to palpation. His collateral ligaments are intact. Forearm compartments are soft. He has a well-healed transverse laceration at the volar medial forearm level. There is no erythema, drainage, or fluctuance at the level of the laceration. He has no tenderness to palpation. He has some apparent muscle incongruity. Distally, his hand demonstrates no atrophy. He has 5/5 intrinsic strength, 5/5 APB strength. He can make a full fist with full extension of all digits. He

canal. He has a positive Tinel from 2 inches proximal to the medial epicondyle to 4 inches distal to the medial epicondyle radiating into the fourth and fifth fingers. Tinel over the forearm laceration elicit only local tingling that did not extend into the fourth and fifth fingers. Elbow flexion test elicits increased numbness and tingling in the fourth and fifth fingers. He has no instability of the ulnar nerve with elbow flexion and extension. His flexor pronator muscle bulk is asymptomatic with normal strength and without pain when stressed or with gentle and deep palpation.

Cross sectional area was measured at the level of his wrist, his mid forearm, and his proximal forearm. The values obtained at all levels were symmetric to within 1mm. — ? mid forearm is NOT the Same

Grip strength using a Jamar dynamometer in position three on the right dominant side elicited 98 pounds of strength without pain and 80 pounds of strength without pain. On the left side, he was able to elicit 115 and 122 pounds of strength without pain. Performing rapid exchange grip strength testing, 4 times in each upper extremity, elicited up to 85 pounds of strength on the right side and 109 pounds of strength on the left side. He denied any pain or symptoms of cramping or spasming during grip despite performing the aforementioned gripping 6 times on each side. — Wrong — Slight Pain in forearm

Two-point discrimination measured with a discriminator on the right side elicited 5 mm two-point discrimination on the radial and ulnar aspect of the thumb, index, middle, and ring finger. In the small finger, he had 5 mm 2-point discrimination on the radial aspect and 6 mm on the ulnar aspect.

With regards to the left side, he has 6 cm incision over the medial elbow posterior to the medial epicondyle, which is healed and is stable and asymptomatic. He has full elbow flexion, extension, full forearm rotation. He has normal sensation in all digits. His median, and ulnar nerve motor and sensory function in his hand is normal. He has negative Tinel's over the ulnar nerve at the cubital tunnel or over the transposed ulnar nerve. He has a negative elbow flexion test.

Dulberg task #1 is

QuickDASH score completed by Mr. Dulberg today elicited a score of 38. He completed all 11 items. Given his physical examination, I was quite surprised by high QuickDASH score. I therefore asked him about each of the items. He states he cannot open a jar with his right hand because he develops cramping and he has weakness when he twists the lid of a jar. He states that he develops cramping within seconds of twisting the jar. He states he cannot do household chores or carry a shopping bag for the same reason. He stated that he had severe difficulty washing his back, scored at 4/5, and when I asked him about this, he states that he had made an error and in fact he had no difficulty with this activity. He also stated severe difficulty when using a knife to cut food or perform any recreational activities. He notices severe difficulty with most activities throughout the week and noted that tingling in his arm was a moderate problem. He stated he had mild difficulty in the last week sleeping at night. — ONLY Some Tight Jars — This

MEDICAL RECORD REVIEW:
As part of this independent medical evaluation, I was forwarded about 8 inches of medical records to review. The medical records that were forwarded to me for review included the following:

1. Medical records from Centegra Northern Illinois Medical Center.
2. Medical records from Moraine Emergency Physicians.
3. Medical records from Open Advanced MRI of Round Lake.
4. Medical records from Associates of Neurology.
5. Medical records from McHenry Radiologists imaging.
6. Medical records from Neuroscience Institute.

does not demonstrate a clawed position. He has a negative Froment's sign. He has a positive Wartenberg's sign. Wrist flexion and extension 5/5 strength. He has a palpable FCU and ECU tendon at the level of the wrist. He has appropriate tension. No radiographs performed. Dr. Talerico wanted to get the nerve studies. His complaints appear to be "likely muscular origin." He may have some "superficial sensory complaints as well." Dr. Talerico did not feel that he required surgical intervention. He was recommended occupational therapy to work on strengthening and conditioning of his forearm muscles. They can also perform pain modalities and he was told to follow up in four to six weeks and the nerve studies would be obtained.

He was seen back on January 6, 2012 for right forearm pain. He does not feel the occupational therapy is helping. He complains of pain/soreness and loss of strength. His history is reiterated. He has attended one or two sessions of therapy thus far. Nerve studies were obtained. He feels he is getting weaker. He feels a burning in the forearm. He asked about disability paperwork. Examination is unchanged. Of note, at this visit that he had no intrinsic or thenar atrophy with 5/5 intrinsic strength. His FDP to the small finger had 5/5 strength. He had light touch, which was intact to all digits. Nerve studies were reviewed, which were normal. No evidence of ulnar nerve injury. Given the location of the injury, this is the only significant problem that Dr. Talerico could imagine from this wound. He has no evidence of nerve or tendon injury. "He may have some residual soreness and some superficial sensory abnormalities, but this should improve over time." Dr. Talerico suggested he continued therapy with no need for surgical intervention. He felt he did not have anything further to offer.

Dr. Sek:
According to the medical records from Dr. Frank Sek, Mr. Dulberg had been seen since 1978. These are handwritten notes and difficult to decipher, but he was seen multiple times in 1984 and 1985 for lower extremity injuries. In 1984 and 1985, he injured his right thumb playing football. His x-rays were negative. He was seen again in 1998 for a fever and in 2002 for low back pain as well as pain in the trapezius after an auto accident 6 days prior. He went to NIMC ER. X-rays of the neck reported as a fracture and he went back for a CT scan, which was negative. He is taking Tylenol and Skelaxin. He has tenderness in the left trapezius and the left lower chest and lumbar area. He was seen again in March 2002, for pain in his back, and later in March 2002 for pain in his lumbar spine.

He was seen again on March 19, 2002 for the same problems in the lumbar spine and then on March 25, 2002 with pain in his buttock and leg with numbness and tingling in his left foot. He was seen back on March 30, 2002 for similar symptoms. He was seen back on April 6, 2002 for pain in his upper trapezius and his lumbar area. He was seen back on April 13, 2002 for spasms in his neck 3 days ago. He was seen back on April 20, 2002 for spasms in his left upper trapezius. On April 27, 2002, he was feeling better with "minor spasms here and there." On May 4, 2002, seen for spasms in the low back and left trapezius. On May 11, 2002, he was seen for muscle spasm again. On May 25, 2002, he was seen for pain in his buttock and leg. He was seen back on June 8, 2002 for similar symptoms. On June 13, 2002, he was released for office work. On June 22, 2002, he was seen for a "pinching sensation in the left upper trapezius and soreness in the lumbosacral area and buttock." On July 6, 2002, he was seen again for similar symptoms and then on April 27, 2007 for headache.

On July 1, 2011, he was seen after his forearm chainsaw injury that occurred on June 28, 2011. He was on Cefadroxil and Norco. His right forearm was slightly swollen and tender. On July 8, 2011, he was seen for suture removal. On January 14, 2012, he was seen because he was feeling depressed as his right hand is weak. On February 13, 2012, he was seen after an MRI of his right forearm was

negative. He was seen on April 24, 2012 for non-arm issues. On August 6, 2012, he was seen after surgery on his right arm.

Mr. Dulberg had an MRI of his low back, ordered by Dr. Sek on April 12, 2002. This is documented as a normal MRI of his lumbar spine.

Nerve studies performed on May 29, 2002 were performed of the left upper extremity. These nerve studies revealed cubital tunnel syndrome without denervation in the ulnar innervated muscles. Of note, the EMG component of the study was completely normal.

Nerve studies performed on December 23, 2002 by Dr. Grobman for persistent left hand symptoms with the previous study of May 29, 2016 showing ulnar neuropathy. The results of this study revealed left ulnar neuropathy at the elbow. .

MRI of the cervical spine was performed on September 5, 2012. Per the radiologist, showed multilevel degenerative disk disease, and a possible atypical hemangioma.

He had radiographs of his right foot performed on November 11, 2005.

Medical records from Michael Grobman are present within Dr. Sek's notes. Dr. Grobman saw Mr. Dulberg on May 8, 2002, for pain and sensory disturbances since a motor vehicle accident. He is noted to be a 32-year-old right-hand dominant gentleman with no significant medical history. He was involved in an MVA on March 1, 2002. He states he stopped to make a turn and another car tried to pass him and then turned back quickly into his lane. The other car's front passenger side impacted into his rear driver's side. He states he had turned all the way towards the left to find the car that was passing him. He states his left arm was between his seat and the door frame. His neurological examination did not show any weakness in his upper extremity with normal reflexes. He was diagnosed with musculoskeletal pain due to a flexion/extension injury and sensory disturbance in the left arm consistent with ulnar neuropathy described as due to the position of the arm at the time of accident, and is likely to be directly related to the accident. He also has sensory disturbances in his left leg consistent with an L5 radiculopathy.

Hand Associates:
According to the medical records from Hand Associates, Mr. Dulberg was seen by Dr. Sagerman on February 27, 2012. He was seen for consultation with regards to his right arm. He sustained a laceration to his forearm from a chainsaw accident on June 28, 2011. He developed symptoms of numbness in the small finger with weakness. He has treated with therapy. He had an EMG and MRI scan. Past medical history remarkable for arthritis and cervical disk disease. He is taking naproxen, Tramadol, Cyclobenzaprine, and Fluoxetine. Examination shows a 7 cm transverse scar at the ulnar aspect of the mid forearm. He has local tenderness and sensitivity to percussion with positive Tinel's sign and paresthesia radiating into the small finger. He has sensitivity at the cubital tunnel. Wrist and elbow motion are unrestricted. No atrophy. He is unable to adduct the small finger. Flexion strength is normal. Sensation is decreased to light touch in the small finger only with inconsistent two-point discrimination. Radiographs of the right forearm performed on June 20, 2011 were reviewed with no fractures or foreign body. MRI form of the right forearm performed on February 3, 2012 was reviewed with no abnormality seen. Nerve studies performed by Dr. Levin on August 10, 2011 showed no evidence of neuropathy. He was diagnosed with a right forearm laceration with probable partial ulnar nerve injury. He was referred for additional nerve study testing. He was told that he may need surgery.

He was seen back on April 2, 2012 after the nerve study was repeated on March 13, 2012. The records state that this shows no evidence of neuropathy. The EMG portion showed no denervation and the ulnar nerve conduction was within normal limits. Examination was unchanged. Treatment options were discussed with him and he does not wish to pursue with surgery. He was therefore prescribed physical therapy, told to follow up in six weeks or p.r.n.

He was seen back Dr. Sagerman on May 14, 2012. He has persistent pain with use of his arm, especially with gripping activities. He had additional therapy, which has been beneficial. He has no change in his symptoms of numbness, which is bothersome. His function is limited due to his pain. Examination unchanged. He has full finger composite flexion with no triggering or locking and no clawing. Wartenberg sign positive. Intrinsic strength is slightly weak. His possible surgical options were discussed and he was suggested to see Dr. Biafora for a second opinion.

Mr. Dulberg saw Dr. Biafora for a second opinion on May 17, 2012. His history is outlined. His examination is similar to that described by Dr. Sagerman. It was noted that he has good strength in the first dorsal interosseous with negative Froment's test, positive Wartenberg's sign. He has full digital motion. He has pain at the scar in his most distal and ulnar border with resisted DIP flexion of the small finger. FCU function is intact, however, with pain at the scar. Nerve studies have been reviewed. He has a positive Tinel around the scar. He has tenderness at the scar to deep palpation on his most ulnar and distal border near the ulna. He is assessed as being almost a year after forearm laceration with probable partial ulnar nerve injury with ulnar neuritis. Surgery was discussed with him.

He was seen back by Dr. Sagerman on June 6, 2012. He has no change in his symptoms. His medication interferes with his functioning. He wanted to proceed with surgery. It was noticed that his scar is stable with tenderness and sensitivity to percussion. He has pain with gripping localized to the forearm region with increased numbness in the ring and small finger with weakness of his grip. His prognosis was noted to be guarded in terms of symptom improvement. He was told to discuss his side effects from the Neurontin with his neurologist. He was scheduled for surgery.

He was seen back on July 11, 2012. He has had surgery. His wounds were healing. Operative findings were reviewed. He was given a prescription for therapy for motion.

He was seen back on July 23, 2012, recovering appropriately after surgery.

He was seen back on July 30, 2012. He is noted to be doing well. His arm feels better. His hand function is increased and he feels his symptoms improved. Examination showed mild diffuse swelling from the scar, but no evidence of infection. Wrist, elbow, and finger motion is satisfactory. Sensation is intact in all distributions. He has improved independent finger flexion compared to his preoperative function. He was told to continue therapy and follow up in a month.

He was seen back on August 27, 2012. He is described as doing well, but his elbow is sore. He is doing therapy. His grip strength is increased. His hand function has improved. Examination shows mild tenderness around the incisions. Elbow and wrist motion unrestricted. He has no ulnar nerve subluxation. Intrinsic strength is increased. Sensation is intact in all distributions. He was continued in therapy for scar management and strengthening. He was told to advance activities. He was limited in work in terms of limited forceful gripping and no lifting, pushing or pulling.

He was seen back on October 22, 2012. His function improved. He is doing therapy. Sensation has improved. He grasps objects better than before surgery. Examination is essentially unchanged. He could maximally grip 112 pounds according to the most recent therapy report. He has less pain with gripping, but tenderness at the dorsal aspect of the forearm scar. He was told to continue home exercises. He is currently unemployed and wanted to pursue with disability. He was told to follow up in six weeks.

Dr. Kujawa:
According to the medical records from Alexian Brothers Neurosciences Institute, Mr. Dulberg was seen on September 25, 2013 documented as being a 43-year-old male with a history of depression as well as an MVA over 10 years ago with resultant cervical DJD and left ulnar nerve transposition, BPH, and migraines. He was seen for evaluation of his right arm dystonia. He had significant trauma to his right forearm after a chainsaw accident two years ago after he was holding a branch when the arm was nearly severed by his neighbor using a chainsaw. Fortunately, the bone was not damaged. He has complaints of burning pain in his right forearm that is worse when he tried to stop Gabapentin. Second complaint is "curling" on his right hand with activity, which started approximately 18 months ago, lasts several minutes, and can occur independent of forearm pain, but usually follows pain episodes. Curling occurs many times a day and can awaken him at night. He also complains of numbness in the medial aspect of the forearm and intermittent tingling. Examination showed he has 5/5 motor in all extremities except right hand grip is 4/5. He has sustained (several minutes) involuntary flexion of the right wrist and three to five fingers at the PIP joint after voluntarily clenching of the fist. Sensation not tested. Diagnosed with posttraumatic dystonia of the right upper extremity and chronic pain syndrome that may be related to intermittent right hand dystonia. He was managed with Gabapentin and was suggested to have Botox injections. There are multiple handwritten notes as well, which are difficult to decipher.

Mr. Dulberg was seen on February 6, 2014 by Dr. Kujawa. The chief complaint is that he has "organic writer's cramp." He is here for follow-up from his initial intake on September 25, 2013. He wants to proceed with Botox injections. He has right forearm pain only with activity, not worse since he stopped Neurontin. He ran out. He drops objects (dinner plates), occasionally has difficulty using utensils. He has migraines much improved after Zomig nasal spray. His problem is that he has organic writer's camp and acquired torsion dystonia. He is also diagnosed as having chronic pain syndrome that may be related to intermittent right hand dystonia. He was given Botox.

Neurology:
I reviewed the medical records from Associates in Neurology. This includes the multiple nerve studies as well as cervical spine MRI. He had a brachial plexus MRI performed on August 26, which was normal. Nerve studies from 2002 are present. MRI of his forearm from January 3, 2012 is present, which was documented as normal. Nerve studies from March 13, 2012, which are documented as normal are present.

He was seen by Dr. Grobman on May 8, 2002 after his motor vehicle accident not pertaining to the right side. He has multiple handwritten notes, prior to this, which are hard to decipher.

It would appear Mr. Dulberg was seen by Dr. Grobman on February 4, 2003. He was diagnosed with ulnar neuropathy at the elbow. It was felt that he could return to work with lifting restrictions.

He was seen back on July 28, 2011 by Dr. Levin. His history of left cubital tunnel syndrome in 2002 was outlined. He states he became asymptomatic by 2007 and he never had difficulty in the right arm.

He states a month prior he was involved in a chainsaw injury as mentioned above. He went to NIMC ER where he had stitches. He had "very significant pain, but as the pain was getting better, he started noticing that he had numbness in the fifth digit and in the inner aspect of his forearm. He has not been dropping things. It was mostly just a tingling and numb feeling. He denies previous symptoms. Examination showed a healed scar in his right forearm with decreased light touch, pinprick, and temperature in the ulnar distribution of the right arm. Strength is normal. It was felt that he had a branch neuropathy of the sensory nerves. He was suggested to undergo nerve studies and see a hand surgeon.

Rehab:
I reviewed the medical records from Fox Lake dynamic hand therapy, which are extensive.

Diagnostic tests relevant to the right arm:
MRI performed at Open Advanced MRI on February 3, 2012 of the right forearm with and without intravenous contrast showed no forearm abnormality appreciated. The radiologist states that this does not exclude the possibility of ulnar nerve impingement, but there is no gross mass or abnormal infiltration along the expected course of the ulnar nerve. No obvious tendon or muscle abnormality appreciated at this time.

Nerve conduction studies performed on August 10, 2011 by Associates in Neurology were reviewed. The conclusion is that there is no evidence of nerve dysfunction

Nerve conduction studies performed on March 13, 2012 by Associates in Neurology were reviewed. This is both a nerve conduction study and an EMG. Both components are noted to be normal with no evidence of ulnar nerve dysfunction.

Operative report:
An operative report was authored by Dr. Sagerman with a preoperative diagnosis of right cubital tunnel syndrome and right ulnar nerve injury at the forearm. Dr. Biafora assisted with the procedure. The procedure was a right cubital tunnel release and right ulnar neurolysis of the forearm. The patient underwent a standard cubital tunnel release with no documented gross abnormalities noted except "the nerve was mobilized from adhesions". A longitudinal incision was made over the ulnar aspect of the mid forearm. He was noted to have some retained suture material that was removed (interesting as per the ER note, he had Vicryl placed which usually dissolves over 3 months). The muscle fibers were found to be in continuity. The ulnar nerve was exposed in its normal position. The nerve was dissected proximally and distally and was completely intact with no visible scarring or adhesions.

Depositions:
I reviewed the discovery deposition of Marcus Talerico taken on October 16, 2013. It should be noted that on page #10, when asked about the physical examination, Dr. Talerico states it was basically a normal exam except for the fact that he has a well-healed laceration in the area of the forearm where the chainsaw hit him. He had some apparent muscle incongruity meaning some scarring of the muscle belly level deep to the skin. He had no tenderness to palpation in the forearm. He has intact strength with normal wrist flexion and extension strength with normal grip strength and normal intrinsic strength. He had a negative Froment's sign. He has a positive Wartenberg's sign documented on page 12. Dr. Talerico states that a Wartenberg's sign is an objective test. On page #13, Dr. Talerico states that he had a healed laceration in the forearm with no appreciable nerve, tendon or artery injury. He had some scarring and he suggested he do therapy. He felt that he might have had a superficial sensory

complaint given the history. On page 17, Dr. Talerico did not feel he was suffering from any type of disability. He felt he had some scarring in the forearm and he had a lot of complaints, but Dr. Talerico did not feel he had any real objective findings that he could come up with a diagnosis that he could treat. Dr. Talerico states on page #19 that he felt that he had a laceration to the muscle belly of his forearm that healed and he did not have any objective weakness or real abnormalities other than his subjective complaints of shooting, burning pain in the forearm area.

Dr. Karen Levin's, deposition taken on October 1, 2013 was reviewed. It would appear that she is a neurologist. On page 12, Dr. Levin outlines the subjective numbness that he had to touch. On page 24, Dr. Levin states that cutting the nerve can cause permanent numbness. On page 32, Dr. Levin states that the MRI of the forearm was negative. She states "I don't know why the patient has continued symptoms, not sure why he bends his little finger. Things get worse with pain in the entire arm. I suggested he get a third opinion with Dr. Scott Sagerman." On page 46. Dr. Levin states that she was confused on August 14, 2013. She did not know why he was still having these dystonia symptoms. He was placed back on Gabapentin and sent back to the hand surgeon.

The deposition of Dr. Ford taken on November 20, 2013 was reviewed. Dr. Ford is an emergency department physician.

I reviewed the deposition of Dr. Scott Sagerman taken on October 15, 2013. Dr. Sagerman states on page 39 that Mr. Dahlberg has some scarring of the ulnar nerve to the floor of the cubital tunnel and local constriction at the flexor pronator aponeurosis. This relates to his cubital tunnel syndrome. On page 41, Dr. Sagerman states that the laceration from the chain saw was "relatively deep - below the skin, below the fat, and into the muscle covering "but the muscle fibers were intact. There was suture material, presumably from where the laceration was originally repaired at the time of the injury. The nerve was not cut or visibly scarred in that area". Dr. Sagerman opined on page 41 that the scarring from the laceration would account for his symptoms, but fortunately the nerve itself was not cut.

I reviewed the deposition of Dr. Kathy Kujawa performed on July 23, 2014. She is a neurologist with an apparent specialty in movement disorders. Dr. Kujawa states on page 18 that after the injury she felt the brain is trying to rewire itself. Not only is the brain trying to rewire itself, the nerves are trying to regrow. Any nerves can regrow, but very slowly. Unfortunately, a lot of times the connections made are incorrect to the wrong muscle and to the wrong place. "So the man may say voluntary I want to squeeze my hand and the wrong muscle contracts, if they can contract at all." She felt these were permanent deficits.

I reviewed the deposition of Mr. Dulberg performed on January 24, 2013. was self employed

DISCUSSION: Mr. Dulberg is a 46-year-old right-hand dominant unemployed, graphic designer who on June 28, 2011 sustained a laceration to the ulnar aspect of his right midforearm. He was seen in the emergency room where the laceration was cleaned and sutured. He had 3-0 Vicryl sutures and 11 Prolene sutures in the skin. After the injury, he saw his primary care physician, followed by multiple hand surgeons. He initially saw Dr. Talerico who felt that his symptoms were not substantiated by his physical examination. He had two sets of nerve conduction studies with the second set including an EMG component, which were negative for any ulnar nerve injury. Dr. Talerico did not feel any surgery would be helpful. He had an MRI with and without IV contrast of his right forearm, which showed no gross abnormalities. Ultimately he saw Dr. Sagerman for another opinion who, after no benefit with further occupational therapy, performed a cubital tunnel release and explored his ulnar nerve in his mid

Dorsal Nerve

forearm. He did find some adhesions in the cubital tunnel, which Dr. Sagerman opined is what one sees in cubital tunnel syndrome. As to the area of the forearm laceration, the muscle belly was noted to be intact and there was noted to be no injury, nor scar around the ulnar nerve. Mr. Dulberg had previously had his contralateral cubital tunnel release performed multiple years prior after a MVA. Mr. Dulberg currently has multiple symptoms that I cannot substantiate based on his physical examination or the medical records. His primary problem is that he describes cramps in his forearm. He states these occur at rest and with activities multiple times a day and are significantly exacerbated by activities. Despite seeing him and personally interacting with him for over an hour in the office today and having him perform multiple activities including squeezing a Jamar dynamometer at least six times on either side, I could not elicit any cramping or spasms in his forearm. Additionally, he had multiple red flags for symptom magnification, including shaking and weakness with abduction and adduction of his fingers, which waxed and waned. He could only actively flex his small finger to his palm; however, passively I could flex his small finger easily and pain-free to his palm, which he could then maintain, as well as after multiple flexion and extension movements of his fingers, he was able to flex his small finger to his palm actively. He describes weakness in his hand and states that he can't type or perform most activities. His examination showed that his grip strength on the right was between 80, 85, and 98 pounds, with no pain in his forearm and no spasming or cramps. His scar was not sensitive or tender and he demonstrated no irregularity in the area. The cross sectional area of his wrist, his mid forearm, and his proximal forearm were symmetric, which would not be the case had he injured the muscle, or nerve and if he was not using his arm normally.

I do feel that Mr. Dulberg sustained a laceration to the right forearm, which did not involve the muscle belly or the ulnar nerve, as proven on MRI, nerve studies and operative exploration. I do not feel that his current symptoms are supported by his physical examination. A laceration as described would not cause focal dystonic signs based on the fact that it did not involve any motor nerve fibers or muscle fibers.

Summary:
I believe that Mr. Dulberg sustained a forearm laceration involving the right mid forearm in the injury on June 28, 2011. This required emergency room care with irrigation and suture. Thereafter, he has developed multiple symptoms, which I cannot base on local anatomy or structural pathology in his right forearm. He has focal dystonic symptoms, which I disagree with Dr. Kujawa, as are not related to any structural abnormalities in his arm. As documented on his nerve studies his motor and sensory nerves were intact in the entire forearm. His muscle belly was intact as proven on MRI as well as seen at the time of surgery. Multiple physicians had stated that the muscle belly and/or sensory nerve branches has caused his problems, but in fact his muscle belly was never violated at the time of the injury as proven by the MRI and found at the surgery performed by Dr. Sagerman. Additionally, his ulnar nerve was found not to be injured by the chainsaw, also based on 2 sets of nerve studies and operative exploration. I believe the reason the providers made the statements above is because there was no structural cause for his symptoms. Obviously, Mr. Dulberg did have a peripheral superficial sensory nerve laceration, based on the fact that he had a laceration just as any laceration or surgery would violate the superficial sensory nerves to the skin. These would heal and stabilize, which they have based on his examination today. On his current examination, he demonstrates no evidence or muscle or nerve dysfunction around the laceration area and no evidence of any residual sensory dysfunction.

I believe that medical treatment that he received was necessitated by the accident. Subsequent treatment has been based on the temporal relationship between his symptoms and the injury, yet he currently has obvious nonorganic findings. He relates the focal dystonia to the accident; however, from

a structural standpoint his focal dystonic symptoms have nothing to do with his structure in his forearm. Nothing in his forearm could account for his symptoms.

As to any preexisting medical problems, Mr. Dulberg's has a history of prior left cubital tunnel syndrome, which has been attributed to a motor vehicle accident. He developed cubital tunnel syndrome on the right side after a forearm laceration, distant to the cubital tunnel. He does have a strong smoking history. Chronic smoking has been associated with nerve pathology, diminished capacity for nerves to heal and increased risk of nerve irritation.

1. ***What if any disability relates to the accident?***

   I feel Mr. Dulberg was debilitated for four to six weeks after the accident. After the laceration had healed, his symptoms began to be nonorganic, as described by Dr. Talerico in his deposition

2. ***What if any permanency is related to the accident?***

   At the present time from a structural standpoint, Mr. Dulberg has no structural deficit in his right upper extremity. He has no structural cause in his right arm that is causing him any dysfunction. The described focal dystonic symptoms are not due to any structural pathology within his upper extremity.
